Code speed is just not important enough anymore to be a deciding factor in
giving a higher level of liscence.

Thanks for taking a moment to remove the personalism that is the
biggest threat to Ham Radio today.

>a HAM if it is:
>1. Impossable for you to learn code.
>2. Too expensive to get a CW waver.
>3. Too much greif and insults from other hams.
>4. Full of other people who are Fuddy Duddy's.

Well, I wanted to experiment with some ideas I had for HF.

>
>Man.... why dont you stay a SWL and forget Ham radio?

Forget it ? Who was it that brought this deabte into the SWL
newsgroup anyways ?

>Or do you think it would all change if someone would just GIVE you a
>license.

This is a personal argument. When a person cannot debate the issue
at hand, or rather, is unable to, they start to sling mud.

I know more than enough about electronics, I studied on my own.
Noone gave me what I know, I had to go out there and learn it. I guess if I
don't see things the same way, I am lazy.

A late friend of mine told me that when the other side of a debate
slings mud, you have won.

Thanks =-)

I just don't think that CW should be the decisive factor in issuing
a ticket. Which is more important, 13+ WPM CW or knowing more theory and
practice ? I lean towards getting rid of CW tests, but I could see a 5 WPM
across the board CW test.

But the worst danger is when a young person checks out Ham Radio,
perhaps has an opinion, and gets slandered and insulted. This is what is
turning the kids off.

>You seem to have overcome your dyslexia in this forum perfectly well.

If I remember to, I use a spell checker. But also, it was a LOT of
work to learn how to type, write or even tie my shoes when I was a kid.

Imagine, "Use your right hand to...Your Left hand to..." when
"Left" and "Right" are almost alien concepts ! As a kid, it took a lot of
work.

Oh well, guess a minor (there are so many people with so much
bigger problems) CNS flaw makes me lazy =-)

My dad (WB8ETH, silent key) could go over 20 WPM. While I thought
it was cool, I just am not able. These things happen. I think CW has a
place, just not the same place it did 30 years ago.

I see your point quite well.

There is an article in an old issue of Ham Radio Horizons that I
read. It was about a group of top flight Hams who hid a secret. Turns out
they where trying to out do each other in working the world bands on one
tube gennys =-). I wonder how many hams might be closet SWL's (ie: Wayne
Green types who might swing their VFO over to 25 Metres once in a while,
but too afraid to admit it) are out there.

Ham radio still has the distinction of being the best way to get
comms going in case of natural disasters and other emergencies. No question
about it. The military is the only group of people who can beat them, but
the hams are a much mroe practical tool for the job.

Mark, In order for me to comprehend it, you have to write it. You
didn't write what you are now saying. You tacked it on later.

> I wioll not bother with the rest of the drivel of a bigot that thinks
> the spanish speakers should bann from the ARS in america

Again you've managed to say something which I never stated. Reading and
writing are going to be far bigger challenges to you than morse testing
since you'll likely need those skills daily.

You seem to think I dislike a certain group of people. That's not the
case. It is YOU I don't care for. You're THE classic whiner looking

for a hand out. You aren't looking for equality of opportunity. You're looking for a special case to be made for you.

Are you so wrapped up in yourself that you worry what your CW speed says about you? For heaven's sake, grow a skin, learn the code, pass the test, and get on with your life! You're not going to change "the attitude" with whining. I might dare a guess that it's the whining that's objectionable, not so much the actual thought of changing the CW requirements.

To tell the truth, I'm pleased to find a lid bigger than I. I feel I might be able to help him, as others have helped me.

So, who's preconceived notion is stopping you from getting your ticket?

Michael.

Just a SWAG,

Isn't that the actual mechanical arrangement used to hold the satellite during launch? Soon as the vehicle gets to where it can release the satellite, it's released from the bus and the satellite is on it's own.

Tbus = terminal bus??

I don't really know - just SWAG'n

Someone who knows for real - chime in!

I am one of the ones who has way lots of trouble catching on to Morse Code and as a result may never progress beyond Tech No-Code. However, I don't want to see the CW requirement go away, because

a) It will still always be a goal for me. I've always wanted to know a secret language shared by only a few people. Too many books and movies in my wasted youth, I guess; and

b) I don't see how Ham Radio will benefit having an influx of people with your attitude and manners (not, mind you, that there aren't a number of the Code people who can use a refresher course in manners).

Here's something else to be considered. Repeater stations, both amateur and commercial, identify themselves in Morse Code. How can you know you're using the right repeater, if you can't identify it because you can't read the repeater's slow Morse ID?

For that matter, on HF, how can you tell which CW station is interfering with you, if you can't read its call?

Is it possible that there are other legitimate NEEDS for Morse Code yet to be found?

I'm sorry, but this is REALLY getting lame. If the pro-coders depend on arguements like this, then HAM radio is not only going to go no-cw, but we'll loose the CW subbands as well.

Mike,

I must agree with you, although I don't agree with your predicted outcome. I don't know why CW is required. It just is. I think I understand why CW has its own sub-bands. It doesn't matter, though; it just IS. We think we know the why of band allocations, and power restrictions. It doesn't matter; they just ARE.

I don't know if learning CW makes you a better ham. I don't know if the rationale for the rule is simply to make sure you can read and follow a rule. I don't care; it just is.

Learn the code; don't learn the code. I don't care. It's not my rule, and I'm not the enforcer. Even if there is no other reason: you read the rule; you complied with the rule; you passed the test. See how simple?

Turn a new leaf; make life easy for yourself. Fat, dumb, and happy are the watch words for today.

Michael.

If eliminating a Morse Code requirement would turn Ham radio into another version of CB radio, it would have already happened on all bands 6 meters and above. The truth is, the parts of the Ham bands that sound like CB are in the code required HF sections. CB is in the HF bands. HF and AM radio attracts a certain kind of person, Morse Code has nothing to do with it.

Actually Ham radio has always assisted in giving communications to
national disaster areas such as Earthquake, Flood, or Tornado disasters.
However, Morse Code is never used in these instances, mostly voice on
the 2 meter band.

No, I don't think I said that at all. I said that my mind does not have the trick of learning morse code. Never could get it as a kid...although I've been having a little more luck lately what with the advent of really patient computer software. The test was the impetus for attempting to learn it because at that point in my life, there were no options...you had to know code to be a ham and I desperately wanted to be a ham.

Please define "linear modulation" as you understand it.

Then we might be able to comment.

I am one of the ones who has way lots of trouble catching on to Morse Code and as a result may never progress beyond Tech No-Code. However, I don't want to see the CW requirement go away, because

a) It will still always be a goal for me. I've always wanted to know a secret language shared by only a few people. Too many books and movies in my wasted youth, I guess; and

1707. THD7 Freq control program

Newsgroup: rec.radio.amateur.space
Date: 1999-05-07 00:00:00 UTC
From: Walter Dunckel <wdunckel@best.com>
Message-ID: <3732FE39.DDD3596@best.com>
Source record: 12423
Body handling: Binary attachment payload not displayed: wdunckel.vcf

I have posted a program as well as it's source code
(in Visual Basic v. 5.0) at the following website:

http://www.best.com/~wdunckel/d7zpinfo.htm

It includes the following functions:

1. Spectrum Analyzer "slow scan" - This scans any 4 Mhz
spectrum selected and graphs any activity with a signal
strength reading of 1 or above. Band needs to be in VFO
mode. Results are displayed on a chart/graph.
2. Dual signal strength indicators (one for each band) work
simultaneously
3. Frequency control with up/down and step, as well as a/b band
and dual band selection and VFO/Mem selection.
4. A two line history of the communication so you can see what
commands are being sent to the radio while you use the program.
5. Push to talk and VFO scan can be selected with the mouse,
and the program should work on either comm port 1,2,3 or 4.
6. There is an area to enter unique commands manually using
the commands that were reverse engineered by Darryl Smith.

This program, again, is far from perfected, but appears to operate with
reasonable success on two of my machines. By the way, I have not
started to implement any APRS functions or settings in this program yet.

SB QST @ ARL $ARLB030
ARLB030 Operators still needed in Oklahoma tornado recovery

ZCZC AG30
QST de W1AW
ARRL Bulletin 30 ARLB030
>From ARRL Headquarters
Newington CT May 6, 1999
To all radio amateurs

SB QST ARL ARLB030
ARLB030 Operators still needed in Oklahoma tornado recovery

The Salvation Army and the American Red Cross have put out calls for
additional Amateur Radio assistance in the wake of Monday's
devastating tornadoes in Oklahoma. Oklahoma Section Emergency
Coordinator Bennett Basore, W5ZTN, has been running emergency nets
and radio amateurs have been handling ''tons of health and welfare
traffic.''

Oklahoma Section Manager Charlie Calhoun, K5TTT, reports the
Salvation Army has requested amateur operators starting May 7 and
probably for the rest of the week. ''They need hams to act as
shadows and transport units in addition to manning the canteens,''
Calhoun said. ''They are expecting to send out 40 canteens into the
field tomorrow.''

Calhoun said much of the activity is going through the Edmond, Oklahoma, 147.135 MHz repeater, which can be difficult to access with hand-held transceivers. He said mobile transceivers and external antennas and power sources would be a better choice.

He said volunteers should plan to stay at least four hours in the field. No vehicles are allowed in the field, and officials are shuttling hams in and out. Calhoun said it appeared that Amateur Radio communication would be required at least through Saturday. Volunteers should check in with the net control on the 147.135 repeater upon arriving in Oklahoma City.

Hams from the Tulsa area are planning to leave today for the Oklahoma City area to assist.

Ken Runyon, KC5PNO, reports that The Red Cross is requesting at least 50 amateur operators to be available all day Friday, May 7, to begin damage assessment. ''Hams will start working with damage assessment teams at 7:30 AM and will be moving from home to home through the disaster area,'' he said. Operators will need good footwear, a two-meter radio, and batteries to last at least 10 hours. Volunteers should contact the Red Cross, 405 232-7121.

OK Public Information Coordinator Thomas Webb, WA9AFM, reports he's monitored health-and-welfare traffic on both 2 meters and 75 meters coordinating Salvation Army canteen support.

''Based on the excellent warning, most of the victims appear to have left the disaster area prior to the strike and were in contact with friends or family or were in shelters with adequate communications,'' he said.

For more tornado information and photos, visit http://www.hamsnet.net/kc5trr/oklahomadisaster.htm

In the Wichita, Kansas, area, Kansas Section Manager Orlan Cook, W0OYH, reports emergency net operations continue on HF. WB0OFS is a net control for the Central States Traffic Net. The town of Haysville was hardest hit during the Monday storms, which left five people dead in Kansas.

With January's unusual tornadoes still fresh in their minds, Amateur Radio operators in Tennessee were ready to respond promptly when severe weather hit the Volunteer State May 5. Some counties activated emergency nets just in case. Hams in Montgomery County were asked to have mobile units ready to go to specific areas to check on flooding. In addition, the Red Cross asked hams there to stand by to assist. One operator was deployed to the local emergency operations center and another to the Red Cross.

> CW

Learning comes *after* taking the entrance test. The entire medical school & law school curricula focus is to pass a national board exam; contractor & real estate licensure, and ham radio guidebooks are geared to passing a test. If you want to learn a subject, well..., that comes afterward with further reading and experience. Them's the facts, that's human nature.

BTW, for all of you who pine about the "good old days" and things aren't like they were X years ago. What was your input? Where were you, on the moon? Did you just standby and let things happen? Oh well....

Source record: 12433

Hey Will,

A couple things. Check out the Office of Radio Frequency Management:
http://www.orfm.noaa.gov/. If hams think they are the only ones
protecting their turf, and worried about commercial interests
encroaching on spectrum, this site is a real eye opener.

http://rtpnet.org/~wxsat/wxrx.htm Is a good primer for weather sats,
including the frequencies. Hopefully this site will convince you your
unity gain discone will NOT be adequate. There are several sites
dealing with the quadrifilar antenna, which would be a better choice for
your needs. The good news is you don't have to buy one; you can build
your own. The best site I've seen for this is:
http://www.personal.u-net.com/~pilotltd/qha.htm.

Also, no slight to this excellent reflector, but you may be better
served by subscribing to the amsat-bb reflector, and lurking on the
rec.radio.amateur.space newsgroup (after the CW debate grinds down :-)
).

73, and good luck!

Mike

Radio Meteor Observation Bulletin No. 69 May 1999

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: still working to identify, possibly South German C2,
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

| Apr 1999
```

Notes:
. the system has been adjusted to detect overdense reflections and minimize local interference.

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.25 MHz
Receiver: Icom R-10
Antenna : resonant dipole
Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: AM
Recording method: listening by ear

April 1999

Number of meteors heard in one hour interval

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference
. # = Strong interference of unknown source
. + = 1/2 hour observation only.

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg (= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal generator. Sensitivity: 5 muV (modulation frequency 1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good), measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz) on Sep 28, 1998.

Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

Notes:
. further hardware modifications: from April 30 onwards, only low pass filter between receiver and A/D convertor.
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections, an indication for potential stream activity.
. local time = UT + 2 hours

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
smallband resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2) tuned at empty frequency. Anti-coincidence measurement rejects registration of broadbanded spurious signals (lightning, computers, ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service, or results could have been affected by interference, sporadic-E.

Note:
. a suitable new location in and on top of the university building has
been found, in time for the April Lyrids.
. Lyrids maximum during the morning hours of April 23, 1999.

Pierre De Groote

Observer: Will Kelsey
Location: Santa Maria, CA. USA (120 26' 9" W, 34 55' 58" N)
Frequency: 107.9 MHz
Transmitter Location: Sacramento, CA. KXOA FM, 50 kW at 362 km.
Antenna: Yagi FM 6 element. Heading North
Receiver: Sangean 803 A
Observing Method: Audio Tape.

Underdense/Overdense Scale:
Overdense: 1.0 second or more duration
Underdense: less than 1.0 second duration

Each observed hour is 60 minutes, exactly.

Will Kelsey

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both
transmitters is processed into same 40 Hz virtual
receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, another channel is used for automatic
interference rejection. Sampling interval: one 4096
point FFT every 0.5 seconds.

The monthly results are now also available at http://www.qsl.net/oe8fnk

The meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value, to
show the reduced accuracy. Results for less than 20 min. observing time are
excluded.

Counts of reflections longer than 6.5 seconds,
assumed to be overdense.

Notes:
. the Lyrids showed up well during April 20-23.
. the low values of April 24 to 27 are not due to receiving
equipment problems.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
JST = UT + 9 hours
. the activity of the April-Lyrids was from April 20 to April 25,
and was comparable to the activities of the previous years.

Sadao Okamoto

-------------------------------------------------------------------------
Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 88.8 MHz ?
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz)?
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2-el. Yagi, G=4 dBd to SW, azimuth 45 deg (SW), polarisation H.
Data sampling system: threshold triggering, sampling rate 32 ms.
Computer logs total hourly elapsed reflection time, number of
triggers for the hour, the longest time the signal was
continuously above detection level for the hour.
Data on major showers available in the Compact MS-Soft format.
Software for viewing available from
www.saunalahti.fi/~oh5iy/radio50.zip (754 K).

Note:
The scaling factors have been re-estimated per Dec. 1998 data from 29 days and compared to monthly averages since 1993. This did indicate some need to adjust the count and time parameter by some +15...20% to keep the curves comparable to the older ones.

Ilkka Yrjola

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment,

available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Greetings all:

I am a SWL'er and I am looking for a rotary joint such that I'll be able to turn my homemade receiving loop on a turntable without having to stop and untangle the feedline.

I contacted an outfit that makes them, but they are quoting me a $350 price.

If anyone can point me to where to get one, or to directions on how to make one, it would really mean a lot to me.

Thanks in advance!!

How about making something with a BNC plug and socket ?
That's assuming you only need 2 connections.

How about making a mechanical stop which will restrict the rotation
of the loop and preventing any tangling from occuring in the line?

If you do need a constant impedance joint and unrestricted rotation,
can you mount a BNC connector coaxially with the axis of rotation?
Maybe build an outer frame or half frame and then mount the BNC on
the top of the loop.

I have read and understood several books on logic. also rhetoric. You
posted rhetoric not logic. Your simple statment that something is not
logical proof that is or is not true, neither did I post logic. You
simply advanced a claim one that hapens to be both false and
insulting.

It is a simple that most people with disabilities tend to
devlope other abilities, often to level far beyond those of "normal"
people. Why? Because we have to. just to survive in many cases. this
does not compensate in any manner just allows us to survive sometimes
it does give one or more of us a niche in the world

You simply don't know what is like to suffer form any
disaility, for that you can be thankful, but without it you can no
more understand my world than I can understand what you see in code,
to pick an example

Mark,

I don't float so well, but managed to pass my scuba tests. OW certification requires a 10 minute survival float. I get the sense you're perhaps familiar with the frustration of struggling, while others lounge around on their portly seat pads, idly chit-chatting. Imagine doing this where life and safety is easily compromised, as opposed to just struggling with uncooperative ears. I wonder if you know what it's like to be at the limit of physical endurance, with the pool edge -- and safety -- far, far out of reach. At the end of the ten minutes, I was exhausted to where I needed help getting out of the pool. I passed the test, but only proved that I would perish in fresh water without a flotation device. I found out later I am a mere six pounds negatively buoyant. That's quite a lot, though, and according to my OW instructor, I am about as dense as they come. Most people are positively buoyant in fresh water.

What does this mean when I mostly dive in calm tropical seas, always with at least a shorty on for flotation? Why should I need to demonstrate that I can survive in fresh water, alone, without help, for a mere ten minutes? Why should a not-so-sprightly-anymore, middle-age man need to demonstrate a skill of dubious use? Why did my perfect written test scores not exempt me from this portion of the test?

Conversely, what expectation should I have of being exempt from any one of the requirements, useful in my mind or not?

Michael.

I don't know if you should have been passed.
I've asked people to leave swimming classes because
they could not float at all. Their bodies just
sunk. Upon showing them how to do a basic float with
sculling, they went under every time. on back and on
stomach and on side.

If they don't pass the float test they cannot go on.
The extreme non-bouyancy of their bodies impossible
to overcome in the water. Like dead weights.

I remember in Scuba classes one woman who could not
stay afloat...just sunk every time
she was told the rules state she has to FLOAT. or
seek another sport to learn.

or move to a salt-water environment to help.

maybe.

hard decisions, but if no able to float, then
it's hard to teach. One guy over in rec.
sport.swimming says that he cannot float and
learned how to swim. Can be done. But he
also gets tired out more.

you are pulling dead weight...that's why.

your weight is working against you.

If i was asked to be your Scuba partner, I'd
defer. I'd be afraid of your problem underneath

overcoming you and taking me down with you when you see me and grab me from behind and will not let go...i'd get out of it, but at what cost. to me or you.

i'd think that swimming would be your non-participating sport in more than 3 feet of water. Or high salt content.

bill conduit
etc.

Your students deserve better than you showed them. I thought it odd that I can easily sidestroke a half hour without rest, but come close to full exhaustion treading water for ten minutes. I also didn't understand the breast stroke until I tried it in salt water. It's as easy as they say it is, if you carry enough body fat. As I said, a 2mm shorty supplies what nature gave the rest of us.

I think a swimming instructor -- you are the instructor, right? -- who won't teach that much perhaps shouldn't be teaching. Which agency issued your credentials?

I passed the "float" test by treading water for the full period; that's not fun for an old fart. I also dive recreationally in the tropics only, wearing at least a shorty. I've since learned that half-full lungs are enough for neutral buoyancy in salt water; the shorty is a safety measure. Near home, for training dives, 3mm full suits are required even in the hottest part of summer. As I said, Dingleberry, I am 6 lbs negative in fresh water. A 3mm full suit makes me 12 lbs too positive.

Don't worry about being my partner. You pack far more baggage than I. And, yes, I passed the test legitimately, without special consideration.

Michael.

Well, I would like to let you know that I have a handycap. I never got any free rides from anyone. I got my license in the 1950's when people had to draw diagrams and know the answers to the questions and send and recieve code. I couldn't draw diagrams, so I had to explain what they looked like. Noone gave me anything and that is the way I prefere it. That way, I don't have to pay anything back later. John Fearon w4wkp, Loganville, Ga.

NEW!

The Cuyahoga Amateur Radio Society is offering a free service to the ham radio community to post no-fee items for auction. Auctions can last from 1 to 14 days, can contain reserve prices, and will automatically extend the auction for 5 minutes after the last bid. Posting is FREE!

We also are offering a free classified ad service. Again, posting is free to the ham radio community.

The ONLY restriction is that items must be of general interrest to the ham radio community.

These services are NEW as of now, so there is little posted.

Find the auction at http://www.cars.org/auction

Find the classifieds at http://www.cars.org/classifieds

Fellow sat ops,

The 1632 pass of FO-29 found it once again in analog mode. As has been happening since it was last toggled into analog mode from the digitalker, the polarity must be switched about every 40 seconds. The bird appears to have an 80 second rotational period, give or take a second or two.

One theory is that only half the turnstile is functioning. As the signal fades with one polarity, there is a deep null, then a switch of polarity brings the signal back up to S8 or better. If you have the ability to change polarity on your uplink and downlink, the bird is working quite well.

73, Mike

As I said, a 2mm shorty supplies what nature gave the rest of us.

For the group's info:

What you said makes perfect sense. The breast and sidestoke are "survival" swimming strokes. The stroke itself contains at least a fifty percent rest at the glide. This is what enables the swimmer to travel very long distances without tiring. The idea with these strokes is to generate as much glide as possible. Treading, OTOH, is a one hundred percent work stroke. I'll take the former over the later any day. (:-]

Dear Future Associate,

You Can Work At Home & Set Your Own Hours. Start earning Big Money in a short time

NO Newspaper Advertising!

Your job will be to stuff and mail envelopes for our company. You will receive $.25 for each and every envelope you stuff and mail out.

Just follow our simple instructions and you will be making money
as easy as
1 2 3

For example stuff and mail 200 envelopes and you will receive $50.00. Stuff and mail 1000 and you will receive $250.00. Stuff and mail 2000 and you will receive $500.00 and more

Never before has there been an easier way to make money from home!

Our Company's Home Mailing Program is designed for people with little or no experience and provides simple, step by step instructions.

There is no prior experience or special skills necessary on your part, Just stuffing envelopes.

We need the help of honest and reliable home workers like you. Because we are overloaded with work and have more than our staff can handle. We have now expanded our mailing program and are expecting to reach millions more with our offers throughout the US and Canada.

Our system of stuffing and mailing envelopes is very simple and easy to do!
You will not be required to buy envelopes or postage stamps.

We will gladly furnish all circulars at no cost to you. We assure you that as a participant in our program you will never have to mail anything objective or offensive.

There are no quotas to meet, and there no contracts to sign. You can work as much, or as little as you want. Payment for each envelope you send out is Guaranteed!

Here is what you will receive when you get your first Package. Inside you will find 100 envelopes, 100 labels and 100 sales letters ready to stuff and mail

As soon as you are done with stuffing and mailing these first letters, your payment will arrive shortly, thereafter. All you have to do is to order more free supplies and stuff and mail more envelopes to make more money.

Our sales literature which you will be stuffing and mailing will contain
information outlining our highly informative manuals that we are advertising nationwide. As a free gift you will receive a special manual valued at $24.95, absolutely free, just for joining our Home Mailers Program.

Plus you will get your own special code number, so that we will know how much you are to get paid. And to make re-ordering of more envelopes, that our company supplies very simple for you.

We are giving you this free bonus because we want you to be confident in our company and to ensure that we will be doing business with you for a long time.

Benefits Of This Job:

1. You do not have to quit your present job, to earn more money at home
2. You can make between $2,500 to $4,500 a month depending on the amount of time you are willing to spend stuffing and mailing envelopes
3. This is a great opportunity for the students, mothers, disabled persons or those who are home bodies.

To secure your position and to show us that you are serious about earning extra income at home we require a one-time registration fee of $35.00.
This fee covers the cost of your initial start up package, which includes 100 envelopes, 100 labels and 100 sales letters and a manual, your registration fee will be refunded back to you shortly thereafter.

Money Back Guarantee!

We guarantee that as soon as you stuff and mail your first 300 envelopes You will be paid $75.00 and your registration fee will be refunded.

Many of you wonder why it is necessary to pay a deposit to get a job. It is because we are looking for people that seriously want to work from home.

* If 3.000 people told us they wanted to start working from home and we sent out 3.000 packages free to every one. And then half of the people decided not to work, this would be a potential loss

of more than $60,000 in supply's and shipping that we have sent out to people that don't want to work

We have instituted this policy to make sure that you really want to work and at least finish your first package.

To Get Started Today Please Enclose Your Registration Fee of $35 Check,Cash Or Money Order and fill out the application below and mail to:

There have been several threads on the reception of NOAA APT "WEFAX"
images.
Since I had a verry good pass (almost stright over head), I decided to do a
little experiment. I used a PCR1000, with a set of crossed dipoles
and phasing harness, with a MOSFET preamp. And used "wxsat", by Crhistian
Bock to display the images.
The best reception was with the BW at 50KHz. At 230KHz the images still had
all the detail, but the noise floor was much higher. At 15KHz, the program
would not lock to the sync pulses, but you could still see some detail.
I coould distingush ocean from land, but that was about it. Plus in the
15KHz mode, I had to keep bumping the frequency down due to the dopler shift.
The signal would just "Walk" right out of the passband.
I hope some may find this this "experimnent" of some use.
Good luck.

After a few years of hype I am now convinced that phase 3d is a hoax. It does not really exist, and that is why it keeps on getting taken off flight lists so it can go back in for some more testing....argh.

Please do send more. It will help in the testing of the bird, pay for
shipment costs and the other costs associated with it and may help pay for
space aboard a commercial launch vehicle if a free ride is not available.

Has any thought been given to trying to get one of the really
big-bucks computer guys to pay for a commercial launch?
I notice that some of these fellows are pretty generous with sci/tech
projects (helping to fund SETI work for example). Seems to me that
they'd be interested in this kind of thing. Hell, maybe we could call
it AMSAT OSCAR GATES.

I'm looking for narrow band continuous sources from
geostationary satellites in the range 1100-2000Mhz.
Beacons, telemetry, etc.
Must be visible from 0 degrees longitude, mid north latitude.

Any suggestions?

I had forgotten that the PCR1000 has AFC, even on weak FM signals the
PCR1000 will stay dead on frequency. This Saturday there should be
another very good pass, so I will try the 15KHz BW with AFC on.

1747. Subspace Communications Network

Newsgroup: rec.radio.amateur.space
Date: 1999-05-13 00:00:00 UTC
From: John Eckart <Eckart@No-Spam.usa.net>
Message-ID: <z%E_2.563$2B2.34230@news.inreach.com>
Source record: 12313

The Subspace Communications Network or SCN is about to go online.

You could have a real time telephone conversation with someone in our neighboring star system using subspace technology.

Subspace signals travel many times faster than the speed of light, but subspace radio signals, even those highly focused and radially polarized will decay over time and even "surface" to become normal slower EM. Therefor a subspace relay will have to be set every 22.65 light years under optimal galactic conditions. Note that this is an approximation, subatomic particles, dark matter and high intensity gravity wells have been known to disrupt, deflect or even absorb subspace transmissions, therefor an average string cell will be approximately twenty light years.

Scientists continue to conduct experiments with higher energy levels in an attempt to drive communications signals into "deeper" layers of subspace, where it is thought the signal will travel up to 80% farther prior to decay.

Calm yourself, Spike. You need not become so emotional about another's hobby. Then again, you might constructively use YOUR time to learn how to write and spell and construct proper sentences. The plural of radio is not "radio's"; and what, pray tell, does your word "follious" mean? In a way, I will agree with your position. If you cannot even use simple English, how COULD you learn code?

1757. Re: WXSAT APT Reception

Newsgroup: rec.radio.amateur.space
Date: 1999-05-15 00:00:00 UTC
From: Bernie Poskus and Cheryl Blehm-Poskus <hamdan@ix.netcom.com>
Message-ID: <373D0DAA.F22B422@ix.netcom.com>
Source record: 12323

I have done some APT reception with relatively good results using an M Squared Eggbeater antenna (for 2 meters) with a Hamtronics R139 Weather Fax Receiver. I do not need to compensate for doppler. If you check out "The Weather Satellite Handbook", on page 3-3, the author points out that the ideal bandwidth for APT reception is 40 khz (I believe the Hamtronics receiver is specifically constructed for this). Here is the exact quote from the book:

"Ideally, we want the IF to be wide enough to pass the signal with full deviation, with some additional allowance for errors in LO [i.e., local oscillator] injection and changes in the signal frequency caused by Doppler shift."

The author agrees with your observations, i.e., that too wide a bandwidth will introduce noise that will degrade the signal, whereas too narrow a bandwidth will clip some of the signal and make it unusable. It is my guess that, assuming you have a decent receiver (I can hear the APT signals clearly with my scanner, but the bandwidth is too narrow), and a decent antenna, bandwidth of the receiver is the most crucial factor in successful reception.
There is a weather satellite mailing reflector you can join. You can probably get subscription info at most websites.

1759. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-05-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7hlsus$1nu@news.Hawaii.Edu>
Source record: 12325
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

1760. Satellites in the 137 Mhz Band ?

Newsgroup: rec.radio.amateur.space
Date: 1999-05-16 00:00:00 UTC
From: herex <herfried.exl@telecom.at>
Message-ID: <7hmpkp$6j6$1@garion.telecom.at>
Source record: 12326

Hallo !
I try receiving LEO Weather Satellites (APT) in the 137 Mhz Band. I found a strong Signal without informations near 137,7 - 137,8 Mhz. This allways long time remaining on signal has no modulation and is not from a Noaa or Meteor satellite. I think it is a signal from a geostationary satellit.
Has listeners a idea witch signal I receive and which satellite?
I need a list of all satellites broadcasting in the 137 Mhz band (weather and all other satellites), can I found and download it in the Internet?

best regards,
Herfried

Easy to recognise a wx sat, they make a loud tick tock noise.
If you hear a satellite with a faint ticking sound, it might be an Orbcom
sending data at 4800bps.
wx sats are best heard in early mornings or evenings.
No geostationary sats there that I know of.

Dear folks;
I've realized what the problem with CW is. One has to
learn it. On the other hand, it's the only form of digital communication
which humans can hear and translate. Of course learning cw would be a lot
more fun if it were installed in a special brain implant. This would
stimulate the pleasure centre whenever the person got a character right.
I can imagine the following conversation between a married couple:

Wife: "Let's go to bed darling."
Husband: Not yet my love, I need to practice more cw."
Wife: "But you've been at it all day."
Husband; "Aw just five more minutes alright?"

If that was possible to do, cw would become more popular than sex and it
wouldn't have the annoying side effect of children either. Hmmm, I just
the spirit of W. C. Fields applauding and cheering. But seriously folks,
cw could be more fun if it were taught correctly. I unfortunately learned
it the wrong way so it took me so long to get it right.
By the way, have you listened to the 40M cw portion of the band
with a wide filter? It sounds like an avant-garde music piece. Perhaps
that could be a new musical form. I think I might just create my own cw
piece using oscilators to generate tones which could be listened to with
the filters in a graphic equalizer.
Oh, one more thing, why doesn't some sci. fiction writer develope
a race of beings who communicate in cw? I've never once, in all my avid
reading, come across that.
Yours,

Bruce Atchison, a starving electronic music composer. Please enquire about
receiving a list of my 14 inexpensive cassette albums.

It is a myth that humans can hear RF without help from electronics. If
electronics are needed anyway, what's wrong with a little more electronics
on that single chip?

> But seriously folks, cw could be more fun if it were taught correctly.

That's like saying that chocolate ice cream could be fun if taught
correctly. Not true. I simply do not like chocolate ice cream. People
vary in their ideas of "fun". What's wrong with live and let live?

> Oh, one more thing, why doesn't some sci. fiction writer develope
> a race of beings who communicate in cw?

Actually during evolution, several species tried Morse code for
communications but predators with higher throughputs caused their
immediate extinctions. :-)

Note that these were all *USA* launches.

P3D is supposed to go on a *European* launcher.

(when Ariane 501 ended in a failure and 502 wasn't a complete success,
US amateurs lined up to state how much better USA launchers were. Of
the last 6 USA launches, 4 were a complete failure. Now we don't hear
from those people, of course)

I think the ham population has reached the "I'll believe it when I see it" stage with P3D. If Dr. Meinzer and crew don't have some pretty firm guarantees to go up on the next Ariane 4 or 5 launch this year, I think it's time for an international publicity campaign, a la SWATCH to force Ariane to honor their contractual agreements with AMSAT. Indeed, the other launchers available in this country are already booked. Also, I did some research and found out that to be a suitable secondary payload on any American rocket except the Titan IV, we needed to be under 150 Kg. P3D is over 600. We don't have many options at this point.

at least it keeps the cb'ers off the hf ham bands, and wish the
truck drivers would get off the 2 meter band, that's where the
fcc made a mistake, with the nocode ticket.

I just had to enter this thread:
To equate this goofy 10 minute SCUBA test with a permanently disability
is ludicruous. Try a better example like doing your everyday routines
blindfolded or in a wheel chair, or with your dominant hand immobile for
24 hours. Then write back and tell the group how easy it was & don't
pick a nice sunny day; try it when the weather is inclement.

And what does this short, ten minute, CONTROLLED introduction to
survival have to do with Morse Code? Does one's life depend on CW? Get
real!!!!

Although I have no preference of the two radios you listed, they both will
work for packet radio, at least at speeds of 1200bps.

I'm kinda partial to the VX5-R. I bought one a couple of weeks ago and cannot put it down. The small size and the 5 watt output were big sellers for me. I'm burnt out on packet, so that wasn't an issue. I also like the ability to program the radio as I like it using either ADMS or EVE software. It does a good job even on AM broadcast and the SW bands with a good antenna. It is am amazing little radio given its' size.

1788. Nevada ATV GPS/Packet Rockoon to launch May 22

Newsgroup: rec.radio.amateur.space
Date: 1999-05-21 00:00:00 UTC
From: cw645@cleveland.Freenet.Edu
Message-ID: <7i2gvo$k08$1@pale-rider.INS.CWRU.Edu>
Source record: 12354

This is a very interesting project that should provide some
decent signals to at least northern California and north and
central Nevada even if the rocket doesn't work. I felt I had
to modify the original wording so as to convey a more realistic
estimate of the radio horizon at a range of roughly 800
miles, which in the eastern direction just reaches Denver at 105 West
longitude. (N1LTV added text in brackets [ ])

Hank, N1LTV

http://www.geocities.com/capecanaveral/3161/hablic.htm
^
HABLIC: "All balloon launches, all the time" __|

JP Aerospace will be attempting the world's first amateur space
flight on Saturday, May 22, 1999. The launch apparatus consists of a
balloon-borne launch box and a solid-fuel rocket which will be launched
from the box at an altitude of approximately 100,000 feet. The target
altitude for the rocket is 62 miles.

For complete details, visit the JP Aerospace web site at:
http://www.jpaerospace.com/

The launch activities will include a number of amateur radio emissions,
many broadcasting from very high altitudes. Much of the [western] U.S.
should be over the horizon for most of the flight [as far east as
105 West longitude (Denver) at peak altitude of 62 miles].

We encourage hams everywhere to try their hands at tuning into our
flight activity.

Details follow:

Operations in vicinity of Gerlach, Nevada, about 100 miles north of
Reno.

Balloon lift-off time is currently set for 0600 on Saturday, but space
operations seem delay-prone, so don't be surprised if the actual time
occurs later. If by some unfortunate chance we are unable to launch
successfully on Saturday, we will be trying again same time Sunday.
(We have two of everything.)

.....

Radio frequencies and protocols

Ground communications: 144.440
Simplex voice communications network.

Rocket APRS packet telemetry: 146.000

Standard APRS packets.
Call sign: W6JPA

Transmit every 10 minutes during balloon ascent,
about 70 minutes total.

Transmit every 3 seconds from rocket launch for 153 seconds.

Transmit every 5 minutes thereafter.

Note --- GPS data will blank out while rocket exceeds 1000 knots,
but packets will still transmit.

Video downlink from launch box: 439.250

Standard cable television encoding --- receive directly on
cable channel 46.

0-70 minutes: 1 minute on (180 deg. scan down to up), 4 off.

70+ minutes: 1 minute scan, 10 minutes straight up, 1 minute off.

5w DF beacon on launch box: 146.520

Every 10 minutes Morse code at 5wpm:

Callsign (KF6FPX)
Tx number (hexadecimal)
Current thermistor resistance (hexadecimal)

1w DF mini-beacon on rocket: 147.455

Unmodulated carrier every four seconds.

.....

Anybody who makes any sort of contact, please send us your observations,
and we'll send you a QSL card to prove your participation in the world's
first amateur space flight!

Contact: John Powell
Phone: (530) 757-1808
Email: jpowell@jpaerospace.com

We're particularly interested in your APRS logs and DF bearings. Anybody providing us with useful data that we miss ourselves, which materially assists us in recovering the box or rocket, will receive an official JPA hat and t-shirt with our thanks. The more ears the better!

We look forward to hearing from you!

The JPA team

1802. AGW Software and MIR contacts

Newsgroup: rec.radio.amateur.space
Date: 1999-05-22 00:00:00 UTC
From: JayC Daniel <jayc@pov.net>
Message-ID: <NCA13.25794$5e2.488471@news2.giganews.com>

I am trying to use the AGW software to make contacts through MIR... here is the problem I'm having...

Every article I am reading says to do an unproto CQ (or grid square) via R0MIR... Now I found the spot to setup the unproto call and can make AGW transmit... but for some reason it doesn't seem to be working... I know I can get in because I can drop to terminal in win95 and do it by hand that way... but needless to say I'd much rather have a windows based program...

Any suggestions welcome.

AGW doesn't support VIA, the maker of the program (sv2agw) told me this. Thats is probably the problem. I was wondering if you can help me? I use my sound card to transmit, and i tried to have an UNPROTO QSO with my friend..he is 3 miles from me. He can hear my sounds perfectly but the program doesn't pick it up on his side. I got the new version, and still the same thing. Anyone know what could be wrong?

Listen for AO-10 on 145.8092 fading carrier (1rev = 3fades , very weak)
UO-11 on 145.824 ASCII (FM)
Mir on 145.985 French astronaut in FM
DO-17 on 145.825 is out of service right now
RS-12/13 145.9125 though the 2m downlink is curently shut down

Yes, Mir on 145.985 and the space shuttle 145.550. The Mir freq is for uplink
and downlink, the shuttle freq is a downlink. They have 5 uplink freqs for
voice ham radio and use 144.490 for packet.

73,
Tom

* SUNSAT SUCCESS *
==================
SUNSAT controllers are happy to announce that successful reception of PAL television images from SUNSAT have been received last week. The commercial grade TV camera on-board SUNSAT is connected via a MUX to the satellite's S-Band transmitter, and the images received at the Overberg Test Range as well as the SUNSAT ground station.

The signal strength of the S-Band transmitter was constant throughout the pass, and the images of oceans with some clouds of South Africa marks a milestone in the commissioning of SUNSAT. The image covers an angle below the satellite of 90 degrees and two of the antennas are visible on the image. On the ground directly below the satellite it covers a width of 450km. The image is three color, and the colors are bright and vibrant.

The congratulations goes to our ground station engineers and lecturers who committed to achieving this milestone.

SUNSAT's history so far:

23 Feb : Launch (after MANY attempts!)
24 Feb : Switched telemetry transmitter on and heard first signals
25 Feb : Recorded and analyzed first telemetry
26 Feb : More telemetry, first switch on of OBC1, 'I'm alive'
27 Feb : Boom deployment, more telemetry,
28 Feb : Uploaded first diary to OBC1 to initiate 10 min interval diary, downloaded in the USA
01 Mar : Restarted OBC1, uploaded diary to do WOD file over 70 min
03 Mar : Backup telecommand path verified
04 Mar : Y-axis torque coil working, estimators switched on
05 Mar : Estimators switched on, reliable communication day and night
06 Mar : SUNSAT attitude is stabilized and pointing to the earth
PHASE I COMMISSIONING COMPLETE - JJDP
14 Mar : SUNSAT's voice repeater is turned on and 38 radio amateurs use it to talk to each other

21 Mar : SUNSAT Reaction wheels are used to rotate the satellite:
FIRST TIME FOR A GRAVITY GRADIENT SATELLITE
24 Mar : NASA JPL GPS receiver is switched on
25 Mar : Successful 128 kbyte code upload for ADCS and filters are converging
05 Apr : Calibration of ADCS actuators
12 Apr : Successful testing of software upload for OBC1
14 Apr : Successful rotation of imager tube
15 Apr : Groundstation repairs due to rain damage begin
21 Apr : First star mapper image downloaded and first imager sensor test
indicates all is functioning well
22 Apr : OBC software successfully uploaded
11 May : First images from the PAL TV imager on SUNSAT
13 May : First images with the PAL TV imager of South Africa

Further information on SUNSAT may be found on the Web at the following URLs:

http://sunsat.ee.sun.ac.za/
http://esl.ee.sun.ac.za/

* OSCAR-11 REPORT *
==========
During the period 15 April to 15 May 1999, reliable signals have been
received from UoSAT-OSCAR-11's 145.826 MHz beacon transmitter. Telemetry
shows that the battery voltage during daylight passes has continued to
decrease with the average value observed being 13.5 volts with 13.1 volts
recorded on one occassion.

The spacecraft's internal temperatures have continued to fall, and have
dropped by about two degrees C during the reporting period, primarily due
to increasing eclipse times. They are now 2.4C and 0.6C for battery and

telemetry electronics respectively.

The magnetorquer spin correction counters have now started to show some activity. During the last month, the negative spin counter has started to increment at about three counts per day, whereas previously it was incrementing at about one count every three days. At the beginning of April, there was a period when the Z-axis counter reached 1024, causing the attitude control to stop. During this time, the spin rate remained fairly constant, indicating that the spin rate did not require any corrections, rather than a fault condition. The Z-axis counter continues to increment normally at around 10 counts per day.

The WOD survey dated 08-April-1999 of channels 39, 50, 52 & 63 (telemetry electronics temperature, battery charge current, battery voltage, and BCR status), has recently been transmitted by the satellite. A plot of channel 52 (battery voltage) shows that during periods of sunlight, the voltage can be seen rising and modulated by the spacecraft spin. The shape of this modulation suggests that one photo cell panel may be generating a smaller output than the others. During the eclipse period, the voltage steadily decreases from 13.3 down to 12.2 volts.

Channel 63, which contains the battery charge regulator (BCR) status, shows that the switch between A & B units occurs when the satellite enters or exits from the eclipse state. Channel 39 (telemetry electronics) shows a very small change in temperature, about one degree C, of the telemetry electronics unit, as the satellite passes through the earth's shadow.

The Mode-S beacon has been heard by Victor, OK1VKW. Victor uses a 40 element horizontal Yagi with an SSB UEK2000 converter into an Icom IC-275 receiver. Signals were S2-3 at a range of 700 km.

OSCAR-11's operating schedule remains unchanged:

ASCII status (210 seconds)
ASCII bulletin (60 seconds)
BINARY SEU (30 seconds)
ASCII TLM (90 seconds)
ASCII WOD (120 seconds)
ASCII bulletin (60 seconds)
BINARY ENG (30 seconds)

The ASCII bulletin is currently a static message that details modes and frequencies of all the amateur radio satellites.

There are additional status blocks after each bulletin is transmitted as well as between ASCII TLM and WOD.

The Mode-S beacon is ON transmitting an unmodulated carrier, but telemetry indicates that it has partially failed, and delivering half power. This beacon is a useful test source for those testing Mode-S converters prior to the launch of P3-D. However, the signals are very weak, and there is a lot of Doppler shift. Users should also note that

the polarization of OSCAR-11 is left-hand circular. Even if you can't hear OSCAR-11, your equipment may still be OK for P3-D. Any reports of Mode S beacon reception on 2401 MHz would be most welcome and should be directed to Clive Wallis, g3cwv@amsat.org.

The 435.025 MHz UHF beacon is normally OFF. However, it can sometimes be heard when the satellite is being commanded by ground control, ie. within range of Guildford, UK. When the 435 MHz beacon is transmitting, the 145 MHz beacon is normally OFF. The data transmitted is mainly binary.

Listeners to OSCAR-11 may be interested in visiting an OSCAR-11 web site maintained by Clive Wallis, G3CWV. The site contains details of hardware required and some software for capturing data, and decoding ASCII telemetry and WOD (whole orbit data). There is an archive of raw data (mainly WOD) for analysis that is continually being expanded as new data is captured. Also included are some audio files containing examples of each type of data transmitted by OSCAR-11. Each one plays for about ten seconds. There are also examples of Mode-S reception. All the audio files are compressed (zipped) so that they can be played off-line. These files should help listeners identify the various types of data, and give an indication of the signal quality required for successful decoding.

The URL is: http://www.users.zetnet.co.uk/clivew/

[Info via Clive Wallis, G3CWV]

* FO-29 SCHEDULE *
==========
The FO-29 command station of has announced the following operating schedule for the FUJI-OSCAR-29 satellite:

Mon 17-May-99 -to- Mon 24-May-99 : Mode JD (1200 baud)
Mon 24-May-99 -to- Mon 31-May-99 : Mode JA
Mon 31-May-99 -to- Mon 07-Jun-99 : Mode JD (1200 baud) - New

Richard, You can use "Instant Track" Which is a great program to track the shuttle and any other satellite you can get Orbital Elements for, if you don't have a program, check out this URL for the shuttles current location.

http://liftoff.msfc.nasa.gov/temp/ShuttleLoc.html

As for where to get Elements? Check out this URL. From NASA.

http://spacelink.nasa.gov/Instructional.Materials/Multimedia/Satellite.Tracking/Current.Satellite.Tracking.Elements/.index.html

Not sure of the frequencies, but surf around spacelink.nasa.gov and you'll be able to find them.

Best of Luck.

Ian,

You are taking some of the right steps to ascertain the survival of the species; the future of ham radio, amateur science in space, and survival of our time honored techniques lie with our children.

As a whole, we need to be more willing to lend our expertise to the education system, children, and earth bound amateurs.

Our technology can spark the interest of even the most cynical Nintendo reared sprout. Talking with people half a world away on a satellite the size of a basketball is pure magic. We can use this technology to our advantage.

First, we need to make certain there are abundant satellite resources available for the future. Planning, foresight, and dedication are necessary. The satellite community needs to make ready a constellation of small satellites, sitting in every country with launch capabilities, ready to hitch a ride whenever the opportunity arises.

For your part? Join AMSAT. Become an area coordinator. Take a portable satellite station to the schools and show the kids the thrill of working a satellite. AO-27, and soon Sunsat, the LUSAT, and Jawsat, bent pipe birds, make great, easy birds to work in a demo.

Many times we hams get caught up in our own world, cleaving to the way things were. Loosen the bonds of the past, and make an investment in the future.

73, Mike

Source record: 12251
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.space

I was just floating around the bands as per usual and come across a rtty signal on 150.02500 fm, It sounded about 50-75 baud and was about signal 8-9 on my AR5000 using a 2m/70cm vertical home base antenna.

I have never heard this around here before but it almost certanely sounded like a satellite signal due to it's doppler frequency change (according to my afc) and fade in and out of signal because of ariel nulls.

Has anybody managed to hear or decode this before ?.

it come over here in the UK at about 21:00 GMT and I lost the sig at about 21:10 G mt today

cheers

The signal is from a Russian low orbit navigation satellite. You can hear them on 149.010, 149.040, 149.070, 150.000, 150.030 MHz. The signal is NBFM.

The telemetry consists of three tones; 7, 5, and 3 kHz. Only one tone is present at any one time. All tone duration's or pulse lengths are multiples of 20 milliseconds. The 7 kHz tone is used as a marker tone. The leading edges of the 7 kHz pulses are exactly one second apart. The length of the 7 kHz pulse is dependent on the time on the satellite clock. The pulse can be from a minimum of 20 to greater than 360 milliseconds long. Between leading edges of the 7 kHz pulses, there are 50 time slots of 20 milliseconds each. Hence, the data rate is 50 Hz.
For decoding the three time words, we are only concerned with the first 360 milliseconds or 18 time slots following the start of the 7 kHz pulse. The remaining 32 time slots contain other data such as satellite identification number and orbital parameters. The three time words are hours, minutes and seconds in that order. The hours are in Standard Moscow Time or GMT plus 3. Each time word is 6 time slots or 6 bits long. Six bits can represent 64 unique numbers which is more than adequate for 0-59 for the seconds or minutes. Since the marker pulse occupies at least one of the hours word bits, at most only 5 bits are available for the hours word but that is sufficient for 32 unique numbers, which is more than adequate for 0-24 hours.
Following the 7 kHz pulse, the data is encoded in a form of audio frequency shift keying, AFSK. The two audio frequencies are 3 and 5 kHz. Neither tone uniquely represents a logic 1 or 0. Instead, the data is presented in a non return to zero, NRZ, format. Basically, a bit to bit transition from 3 to 5 or from 5 to 3 kHz represents a logic 1 and no transition or frequency change from one time slot to the next represents a logic 0.

If you can read PowerPoint, I can send you a more complete article I wrote on decoding the time from telemetry. The article references the massive work done by the Kettering Group.

I must admit Tom, the thought of a permanent Ham presence on the ISS is what
is really keeping me going in this space part of the hobby.

Currently listening to shuttle re-broadcasts on 14.295, coming in loud and
clear here in UK...also scanning the shuttle freq's like mad on my AR5000
...you never know :-)

The Swan 350's, no doubt one of Swan's most popular series of transceivers. I bought this radio because it was sold together with a Swan 500. I've decided to keep the 500 for my father and sell this 350.

Comes with a Swan hand mike, Swan 117 power supply, manual (copy) and an external Realistic speaker.

I have fired it up and have made contacts with it on SSB. My watt meter shows in excess of 200 peak watts output on SSB.

A Response almost as heavy as my question :-).

But seriously Mike, you are right there. I may not be able to do much but I will always endeavour to do what I can to get others interested in this part of the hobby. I must admit it is a thrill when you get a youngster who has never known that it is possible to listen to, let alone talk to astronaughts and cosmonaughts, and of course other Hams VI sat's, along with weather satellites and all the other bits that we listen to it is fun watching their eyes light up when they realise this is possible :-)

When I read the first message in this thread from Ian, I expected the tread to quickly degrade into "ham radio is going down the tubes and its all the fault of so and so", similar to the code - no code debate.

But I am glad to see the spirit of the messages is one of constructive criticism. This is so refreshing I had to post a message and say so.

Heard AO-10 fairly well tonight; the beacon
doesn't seem to be FM'ing, and I heard a few
QSOs in progress.

I'm using 2 x 11 foot horizontal yagis with
40 feet of LMR-500 into a TenTec 1210 xvtr
and no preamp.

Wish I had my 70cm setup for the uplink.

another post mentions several satellites... I would like to ad AO-27
which has a 2m FM uplink and a .7m FM downlink
I do not recall specific frequencies off hand. it can be worked with the
following gear.
1:2m FM HT
1: hand held, or circular polarized beam antenna
1: .7m receiver (headphones or similar earphone required)
and a set of decent notes on when and where the passes will be.
e-mail me if you want specific information on this satellite as I plan
on working it during field day, and am building a good set of notes on
it.

Source record: 12261

My personal view is that there is a great future in amateur radio. That is why I spend so much of my spare time helping out with SAREX. One of the things that NASA likes so much about SAREX (and I know from having briefed top ISS management) is that it encourages so much educational activity by the general ham community. At every meeting I've had with NASA management they never fail to mention how important they consider the shool activities of the general ham on the street. NASA is incredibly supportive of amateur radio activities on shuttle. And the ISS countries have made an immense contribution to supporting amateur radio on ISS. And that is because they see the benefits of hams going to local schools and teaching about space and ham radio. Not everyone can actually make hardware to fly on the shuttle. But everyone *CAN* go to their local school and volunteer or run a booth at a hamfest and get people enthusiastic about space. That support by you, the "ham in the street", is what convinces the national space agencies that they should spend valuable time and effort on amateur radio. So, get out there and have fun teaching people about ham radio and the space program! And while you're doing it, takes some photos or write a short article for the ARRL (or your national radio club) to help get the word out further. Thanks for reading this far...
73s,
Will

Tom,

It was Ben Franklin who stated most aptly, "People are generally as happy as they've a mind to be." This is true of any segment of society, hobbyist included.

Ham radio is in good shape, but some changes must be made to keep that spark alive, and interest our sophisticated young people. In an era where sending a man to the moon seemed far fetched, Oscar work and amateur radio in general were bleeding edge. Now, in an era where shuttle launches are commonplace, we must work hard to recruit new members to our community. A positive attitude, helpful tenacity, and kind words make the task less daunting.

another post mentions several satellites... I would like to ad AO-27
which has a 2m FM uplink and a .7m FM downlink
I do not recall specific frequencies off hand. it can be worked with the
following gear.

Important: Make sure you can hear the downlink before transmitting to AO-27
or you're likely to cause bad QRM. Over in passes over North American, it is
rare that there aren't at least several people on, with dozens on weekends.
It's got a very sensitive receiver. So if you can hear it, you can work it.

73's and good luck!

Hi Tate
When WinOrbit unzips it creates several directories and sub directories.
I named my directory "Satellites" and win orbit created:

c:\satelites\database
c:\satellites\database\qth
c:\satellites\database\sat
c:\satellites\keps
c:\satellites\keps\misc
c:\satellites\useralgo
If you dont have these, check win zip to make sure all files are being
unzipped.
Your name for c:\satellites may be different as Winorbit probably
Hope this helps

1860. SUNSAT Operation Schedule

Newsgroup: rec.radio.amateur.space
Date: 1999-05-30 00:00:00 UTC
From: kendurham@home.com
Message-ID: <37518028.338011875@news>
Source record: 12276

According to the SUNSAT web site the satellite is only operational as an Amateur Radio repeater when it is over South Africa and is turned off elsewhere. There is no mention of ever turning it on for the rest of the world. This could just be an oversight on the part of personell writing the web page or it might be intentional. Does anyone know if these people plan for SUNSAT to be used for the entire Amateur Radio community or just for South African Hams? They seem to be about as informative of their plans as AMSAT.

It just happened again !, one pic then nothing right the way across Europe
:-(

I hope they are perhaps setting it up and adjusting things, otherwise it
will be a game of guess the schedule again :-)

Hello, i'm a geophysics major so my interest was peaked when a friend of mine sent me a SETI@home program. I"ve been running it for the past day or two and was wondering if anyone could give me some information about it. I've been to the homepage for it but the info was kinda sketchy. Any personal opinions.

Thanks in advance,
Adam

I have been using Seti@home for the past few days, then i deleleted it. Here is what it does:
When you are not using your computer it loads up a program that downloaded a file from an observatory that recorded the sounds on a specific frequency. The program then takes the entire sound file. And uses your computer's CPU power to analyse the data for high power. The highest my file every got was 160.49. I suppose when it reaches some high power level that means that that signal was possibly sent by ET.

This program is fun to watch for a few minutes. It takes approx 26 hours to analyse an entire file on my p2 266 with 64 ram.

Now here is the question: what do you get if you find an ET.
The answer: Nothing....probably some recognition. But the chances are better if a person gets hit by lighting 3 times on the same spot.

If you really like the way it looks...keep it as a screen saver it doesn't hurt.

Enjoy,
Felix

Felix;

I think you are being a bit hard on the creators of SETI@HOME.. If
you take a minute to think about it, the concept of what they are
doing is nothing short of brilliant! SETI, having lost most of it's
funding, simply can't afford the megga computers it would take to
crunch the data it has recorded, so to write a program to crunch the
data on personal PC's is an outstanding idea. And to make the program
in the form of a screen save is even more outstanding. After all, the
program only uses your CPU when you are not using it, it's rather
pleasing to look at, completely harmless and helping a cause that may
be a waste of time or may be the most important thing ever in the
history of humanity. You kinda make it sound like a cheesey Beavis
and Butthead, shareware, written in BASIC screen saver. It's not,
it's much much more.

Seti@Home has been getting alot of airtime on the networks, CNN, MSNBC
etc etc. And it says right on their web site that you will be given
"Co-discoverer" credit if your PC turns out to be the one that
crunches the ET signal. It has had enough media attention to assure
you credit when credit is due. And on a final note, I trust that they
would give one credit even without the mass exposure, why wouldn't
they? It would only enforce that their idea of using personal PC's
was a great one that worked!

So before you give a big thumbs down to this piece of software in
posts to those who enquire about it, give them the oportunity to make
up their own minds about it's importance, or lack thereof...

My $0.02

I heard the same thing...just as the pass was due to end I tuned to 145.940 and the French ham was there...he'd just sent an SSTV pic which I missed and was speaking in English to some one but didn't catch his call.

The SSTV on the previous pass I think was terminated so they could contact Moscow on 143.625.

Source record: 12289

Hello friends,

I managed to receive my first SSTV pictures from MIR. It was on May 30
during two following passes over Warsaw (Poland). They were sending pictures
while talking with someone on 145.940
I put those pictures at http://www.piap.waw.pl/~piotrs/ (look there for link
with pictures from MIR)
It is very upseting for me that they call only hams from Belgium and
Germany. Each time (since few months) they go silence over Poland.
Over last weekend they were calling someone from Germany: DE3BC or something
like this (russian cosmonaut was spelling like GE3BC, but it was supposed to
be someone from Germany).

How about giving a frequency???????????

1880. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-06-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7ivt3c$qka@news.Hawaii.Edu>
Source record: 12199
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

Yup, you are right, we should try. There was an article on Seti@home in this weeks Time Magazine. For those who are interested in more info. They have like 400,000 computers who have downloaded the program. Hey if they find an ET, it sure will be interesting.

That's a neat idea. Don't know if they are going to strip down the station or what, but it would be neat to leave on a power source for the SSTV and allow it to transmit as the station neared closer to its 'fate.'

>
> --
Unfortunately Ian, I am not optimistic, based upon current observation of conditions. Attendance at the AMSAT NA convention was way down last year. Two years ago in Tucson, it was 300. Last year, 160.

There are several BIG problems. One is that we are slowly losing our easy sats. RS10 is dead. RS15 is almost dead. RS16 failed. FO29 has one foot in the grave, and is basically crippled. FO20 is getting old and losing power. None of the new, LEO Mode A sats has produced what we had with RS10. So, there is little reason for someone to put up a station for voice operations. About all we have left of the easy sats is RS13, and FO20 (for now).

We also have been without a reliable high Molynia DX satellite for several years now, since AO13 augered in. AO10 is brain dead, battery dead, and wobbles. It works occasionally, with perseverence. I note that not many even try on AO10 anymore.

Worse yet, AMSAT has failed to make good on its promise to have P3D up by mid 1997. (It is not entirely their fault.....they just got swindled by a major international space corp.) We hear lots of rumors and promises, but they're just that, rumors and promises. There is no scheduled launch date, two years after it was practically guaranteed to

be up. Without a P3d sat, the amateur program will slowly disintegrate.
No one on the AMSAT Board wants to step out of the box and talk to the commercials about allowing us to put a small transponder on one of their high sats for a promotional fee, and bragging rights. However, even AMSAT admits there will be no more P3d's, regardless of whether this one makes it up or not. What other options do we have? Piggybacking on commercials is our only hope for the future, and we're ignoring it.

Only the ISS communications holds any hope for future space communications. And I think people will tire of this one-qso mode very easily.

We need a high, easy to use DX phone sat to reignite interest in the amateur satellite program. If we don't get it soon, most will take their 2m/440 beams and az/el rotors down, and go put up 20/15/10 tribanders instead. AMSAT's future will also be bleak without a P3d sat in orbit.

My opinion....for what it's worth.

I really don't know ifs any of those, but the strongest peak power is the strongest signal your computer found from all of the data that was scanned i had something like 160.49. If it is a very high power, that means the ET is txing.

I'm trying to find an old friend who's a truck driver, I've lost contact with him, but I need to talk to him urgently about something
very important, he's name is Victor Sanchez, he's original from Colombia, 38 years old, about 5 or 6 feet tall and around 160 pounds
of weight, he's Hispanic.
Is there anyway that someone here could send a message using a radio with the same frequency or whatever the truck drivers use to help me find this guy?
The last time I heard from him, he was living in Texas, I believe somewhere around Galveston, but I'm not sure. It could be anywhere on Texas. His personal car is a 92,93 or 94
Geo Storm, light blue color, hatchback type. The only thing I have left are some pictures that I can e-mail on request, in two of them he's standing up right next to a black Kenworth truck, with the name MC Van Kampen Trucking Inc. on it, and truck number 559, Michigan license plate RM 2957. If you know Victor, please e-mail me with information on how to get back in touch with him, my e-mail is as follows: aplaza@superlink.net
Your cooperation regarding this matter is greatly appreciated, it is really important that I find him as soon as possible.
Thanks,
A. Plaza

Source record: 12228

Yes it can be done ! Suits operate on 279.00MHz AM just leave this freq and the other shuttle UHF comms in you scanners memory set it to scan with a VOX or squelch operated recorder (if you have a PC with a sound card try 'Recall' or 'Scanner Recorder')connected for the duration of the mission. You may just get lucky.

Alternatively if you wish to be a bit more scientific take a look at the predicted Shuttle orbits on the NSAA web site and compare this against the EVA schedule also on the same WEB site. By comparing this data and your ground position you should be able to work out when, how long for and in which direction your best chances of success are. The last time I heard them in the UK I only got a few seconds of speech out of the whole mission, which was not bad considering the limited amount of time they were in range whilst an EVA was in progress.

Because there aren't any fixed connections. Any uplink
can (in theory) be hooked up to any downlink. The
relationship needn't be one-to-one, either.

Hi Rick, it seems that you have looked at it in the same way I have seen it. I must say though piggy-backing is a good idea but will this eventually end with commercial interests seeping into ham (aka swatch) ?.

I think (speaking for myself here) that the ISS is indeed a MAJOR project which I would like to see a LOT put into especially with ideas like a 24hr sstv station etc etc. The interest that this would bring to the hobby with children would be very powerful and would also benefit the space industry aswell.

I must admit though I do think that the classic "ham sats" as we know them may be struggling in the future and this would be a shame as all the invention, pride, and of course the the brilliant ways in which these people can build a satellite out of "bits" compared to the commercial ones and at a fraction of the cost will be lost ?.

Besides if there is nothing in spaced for me to monitor that isnt encrypted, digitised or in some way un-accesible my missus will not be able to get used to seeing so much of me when I have to come to bed early :-)

That's because there is no such pairing in P3D.
Read some of the other stories on how the satellite works...

Jeff,

Geostationary satellites require complex orbits, positioning, and expensive launch vehicles. What WOULD be feasible, is a constellation of LEO picosats. If they contained a simplex digipeater, it would accommodate the APRS/Packet crowd. If they also contained what some call a bent pipe, or mode JA FM system, they could accommodate voice communications.

Recent advances in technology make a satellite with these abilities smaller than a toaster. (Remember the flying toaster screen saver? :-)) If we built MANY of these birds, and kept them in the various AMSAT countries with launch agencies, EVENTUALLY, we could have launch opportunities to keep a steady stream of such birds constantly hitching rides.

They could operate on the same frequency, 144.390, or some other coordinated frequency :-) for the APRS hardware, and a standardized 2 meter/70 cm pair for voice. Each bent pipe would have a unique PL tone on the uplink, to keep terrestrial operators from keying multiple birds. In addition, ALL of these birds could respond to a standard DCS tone, to accommodate wilderness users and priority/health and welfare traffic. In an emergency, an operator might need to hit ANY bird. Each bird would have a unique signature at the end of each transmission, like many repeaters now use. The "roger beep" could be a single alpha or numeric CW ID. This would give us A - Z, and 0 - 9, or 36 unique identifiers. It wouldn't take long for an alert operator to determine exactly which sat in the series they are hearing.

Once several of these birds reached orbit, mobile and handheld APRS operators would have reliable coverage, several times per day. It would allow family to track loved ones on the road, and in fact, exchange informational messages with them. Mobile and handheld operators would have a constant parade of bent pipe technology within "ear shot," and the armchair operator could use and monitor the birds for emergency traffic.

Recently, handheld devices have made some quantum leaps in technology, with one even incorporating a TNC. With a constellation of the above described birds available, manufacturers would surely market HTs with built-in GPS and TNC operations.

These devices would instantly make the position available, of any operator using the device. Imagine the benefit to rescue teams responding to a wilderness crisis. During a regional disaster, such a system would be indispensable for emergency operations.

With such a constellation of birds, the amateur space community would reassert itself as technology leaders, and just perhaps the Nintendo generation would take note, become interested, and join our ranks.

What do you think? Are we ready to break out of the box and embrace a new technology head on? We could even call the project millennium. The project mascot could be an animated flying toaster. That would appeal to the Pop tart, er, Nintendo generation.

73, Mike

Hi,

I'm trying to set up a ground station with linux as my operating system. I've already got some tracking software (sattrack v3.3), however I don't know where to get the hardware to use it with....

i.e. you can use trakbox (where do I get one) or Kansas City Tracker (is there a linux driver out there somewhere???)

Is anyone working on a KCT for linux driver???

I'd love to know.

Thanking you in advance

Keith Bannister

> If we built MANY of these birds... to keep a steady stream of such birds
> constantly hitching rides.
>
> They could operate on the same frequency, for the APRS digipeater, and a
> standardized 2m/70 cm split for voice... mobile and handheld APRS
> operators would have reliable coverage, several times per day....

At first, 70 cm as an uplink seems to require doppler tracking by the user, but if the satellite simply had a 30 KHz wide IF, then FM would get through just fine without doppler compensation. Only penalty would be about 3 dB in link budget. But the ground user can afford the added 3 dB uplink power.

The 2m downlink is required due to the 9 dB advantage. This reduces the XMIT Power needed by the tiny satellite. AND the small doppler on 2m, then does not require the users to have wide band receivers or to track doppler.

This is just so easy, and there are so many schools that want to "build" satellites for their students to learn, and this project woiuld give everyone a "usable" payload, and a frequency plan from the git-go.

Keith,

One resident satellite expert, using/developing Linux applications is
John Magliacane, KD2BD.

http://www.njin.net/~magliaco/
kd2bd@amsat.org

You might try asking him what course to take. I know there are not
currently any Linux drivers for the KCT, but rumors are there will be
soon. There are drivers for the Trackbox however. There are still some
of the kits available from time to time. Maybe someone will chime in
here.

You might want to consider a Basic Stamp project for positioning. If I
remember correctly, there was a project in the works. Check out the
list of stamp applications.

http://www.hth.com/losa.htm

73 and good luck,

Mike

Fair comment John, but I feel that having slow scan in space is very
beneficial and would not cause any undue interference with the bands as it
would most probably be isolated to a spot frequency in the 2 mtr range, but
i see your point when i listen to 20 meters sometimes.

but as they say a picture says a thousand words (or packet baaarps :-))

Eavsdropper,

Maybe you're not listening in the right places? Check the AMSAT web
site for satellite information and frequencies. Also, get the latest
kes, and a good tracking program. Try WINOrbit 3.5 from the AMSAT site.

http://www.amsat.org

What antennas are you using? With what radio are you listening to the
birds? How about your feedline? Preamps? Most of the birds would be
considered weak signal.

Here is a partial list of birds I know are working, because I've worked
them in the past few days:

FO-20
FO-29
RS-13
RS-15
MIR
AO-27
KO-25
UO-22
IO-19

I have used Sattrack 3.3 with a homemade version of the AMSAT-DL rotor
interface. All the other interfaces mentioned are hopelessly complicated
and often much less clever in design.
(what happens when the computer crashes while the rotors are in operation?
on a KCT: your rotor burns out. on the AMSAT-DL interface: it just stops)

The AMSAT-DL interface is just two CMOS shift registers, a couple of
resistors, op-amps, and drivers to drive the rotor. When you have a
rotor with built-in relay drivers (G5400 etc) you can omit the relays
from the design. I built my home-made version in the control box of
the rotor, and interfaced it to two handshake lines of an RS232 port.
The remainder of the RS232 port is available for things like transceiver
control.

THIS REALLY CAN MAKE YOU EASY MONEY!! ITWORKS!!! BUT YOU HAVE TO
FOLLOW IT TO A LETTER FOR IT TO WORK!!!! A little while back, I was browsing
through
newsgroups, just like you
: are now, and came across an article similar to this that
: said you could
: make thousands of dollars within weeks with only an
: initial investment
: of $6.00! So I thought," Yeah, right, this must be a
: scam", but like
: most of us, I was curious, so I kept reading.
: Anyway, it said that you send $1.00 to each of the 6
: names and address
: stated in the article. You then place your own name
: and address in the
: bottom of the list at #6, and post the article in at least
: 200
: newsgroups. (There are thousands) No catch, that
: was it. So after
: thinking it over, and talking to a few people first, I
: thought about
: trying it. I figured what have I got to lose except 6
: stamps and $6.00,
: right? Like most of us I was a little skeptical and a little
: worried
: about the legal aspects of it
: all. So I checked it out with the U.S. Post Office
: (1-800-725-2161) and
: they confirmed that it is indeed legal! Then I invested
: the measly
: $6.00. Well GUESS WHAT!!... within 7 days, I started
: getting money in
: the mail! I was shocked! I figured it would end soon,
: but the money just
: kept coming in. In my first week, I made about $25.00.
: By the end of the
: second week I had made a total of over $1,000.00! In
: the third week I
: had over $10,000.00 and it's still growing. This is now
: my fourth week
: and I have made a total of just over $42,000.00 and it's
: still coming in
: rapidly. It's

: certainly worth $6.00, and 6 stamps, I have spent more
: than that on the
: lottery!!
: Let me tell you how this works and most importantly,
: why it
: works....also, make sure you print a copy of this article
: NOW, so you
: can get the information off of it as you need it. STEP 1:
: Get 6 separate
: pieces of paper and write the following on each piece
: of paper "PLEASE
: PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00
: bills and place ONE
: inside EACH of the 6 pieces of paper so the bill will not
: be seen
: through the envelope to prevent thievery. Next, place
: one paper in each
: of the 6 envelopes and seal them. You should now
: have 6 sealed
: envelopes, each with a
: piece of paper stating the above phrase, your name
: and address, and a
: $1.00 bill. What you are doing is creating a service by
: this. THIS IS
: ABSOLUTELY LEGAL! Mail the 6 envelopes to the
: following addresses:
:

: #1) Grant
: P.O.Box 703394
: New Smyrna Beach, FL 32170
:
#2) Cindy
: P.O. Box 276
: Albion, RI 02802
:
#3) Nash
: 108 Jacksons Run
: Morganton, NC 28655
:
: #4) Kei
: 28 Westcott St
: Old Tappan, NJ 07675
:
#5) Bob
: 661 Wichita Ave.
: El Cajon, CA 92019
:
: #6) M Watts
: South house, Reading School

: Reading
: Berks, RG1 5LL
: ENGLAND

STEP 2: Now take the #1 name off the list that you see
: above, move the
: other names up (6 becomes 5, 5 becomes 4, etc...) and
: add YOUR Name as
: number 6 on the list. STEP 3: Change anything you
: need to, but try to
: keep this article as close to original as possible. Now,
: post your
: amended article to at least 200 newsgroups. (I think
: there are close to
: 24,000 groups) All you need is 200, but remember, the
: more you post, the
: more money you make! ---DIRECTIONS -----HOW TO
: POST TO
: NEWSGROUPS---------- Step 1) You do not need to
: re-type this entire
: letter to do your own posting. Simply put your cursor
: at the beginning
: of this letter and drag your
: cursor to the bottom of this document, and select
: 'copy' from the edit
: menu. This will copy the entire letter into the
: computers memory. Step
: 2) Open a blank 'notepad' file and place your cursor at
: the top of the
: blank page. From the 'edit' menu select 'paste'. This
: will paste a copy
: of the letter into notepad so that you can add your
: name to the list.
: Step 3) Save your new notepad file as a .txt file. If you
: want to do
: your postings in different sittings, you'll always have
: this file to go
: back to.
: Step 4) Use Netscape or Internet explorer and try
: searching for various
: newsgroups (on-line
: forums, message boards, chat sites, discussions.)
: Step 5) Visit these
: message boards and post this article as a new
: message by highlighting
: the text of this letter and selecting paste from the edit
: menu. Fill in
: the Subject, this will be the header that everyone sees
: as they scroll
: through the list of postings in a particular group, click

: the post
: message button. You're done with your first one!
: Congratulations...THAT'S IT! All you have to do is jump
: to different
: newsgroupes and post away, after you get the hang of
: it, it will take
: about 30 seconds for each newsgroup! **REMEMBER,
: THE MORE NEWSGROUPS YOU
: POST IN, THE MORE MONEY YOU WILL MAKE!! BUT
: YOU HAVE TO POST A MINIMUM
: OF 200** That's it! You will begin reciving money from
: around the world
: within days! You may eventually want to rent a
: P.O.Box due to the large
: amount of mail you will receive. If you wish to stay
: anonymous, you can
: invent a name to use, as
: long as the postman will deliver it. **JUST MAKE SURE
: ALL THE ADDRESSES
: ARE CORRECT.**
: Now the WHY part: Out of 200 postings, say I receive
: only 5 replies (a
: very low example). So then I made $5.00 with my name
: at #6 on the
: letter. Now, each of the 5 persons who just sent me
: $1.00 make the
: MINIMUM 200 postings, each with my name at #5 and
: only 5 persons respond
: to each of the original 5, that is another $25.00 for me,
: now those 25
: each make 200 MINIMUM posts with my name at #4
: and only 5 replies each,
: I will bring in an additional
: $125.00! Now, those 125 persons turn around and post
: the MINIMUM 200
: with my name at #3 and only receive 5 replies each, I
: will make an
: additional $625.00! OK, now here is the fun part, each
: of those 625
: persons post a MINIMUM 200 letters with my name at
: #2 and they each only
: receive 5 replies, that just made me $3,125.00!!! Those
: 3,125 persons
: will all deliver this message to 200 newsgroups with
: my name at #1 and
: if still 5 persons per 200 newsgroups react I will
: receive $15,625.00!
: With a original investment of only $6.00! AMAZING!
: When your name is no
: longer on the list, you just take the latest posting in the

: newsgroups,
: and send out another $6.00 to names on the list,
: putting your name at
: number 6 again. And start posting again. The thing to
: remember is, do

Ah, did they tell you that when you were abducted and probed?

The truth is that we don't know what ET uses, if ET even exists.
But SETI@home is looking for polychromatic signatures in the
data just in case ET is using spread spectrum technique (almost
certainly not CDMA though, that'd be pointless for interstellar
signaling where SDMA is quite sufficient).

When I was 14 - 16, I had to
spend 5 hrs a day on subways
and buses commuting to the
Bronx (NYC) for H.S. As I
studied / dozed, I was fully
convinced that every motorman
and driver was a ham... The
air-brakes were constantly
singing CW. (As were the steam
pipes at home, the passing auto
horns, sparrows, etc. It was a
grand time!)

Richard,

I'm not sure that talk of a digipeat/bent pipe subsystem has been discussed, although the idea of a constellation of small sats has. Iridium has done just that.

The nice thing about a 4 year lag in time, is that students at the think tanks, and many of the faculty have changed. New blood, new ideas, new incentives.

In order to get a project of this magnitude off the ground, the first step would have, of course, to be the specification stage. Here is where the device is specified and the exact use is nailed down.

The next phase would be the most fun. It would involve a competition to see who develops the best system. The competition could be open and invitations extended to any college or university (or high school) with the desire to produce a space ready device. At the end of the competition, a panel of experts from the various AMSAT organizations would pick the best system(s) and award honors and a substantial cash prize.

The winning design team(s) would then be commissioned to create a blueprint of their device. Plans and specifications would then be farmed out to the other competing teams around the world for fabrication. The satellite as I see it will not be either large or complex, and in short order we would have a flotilla of flying toasters ready for launch around the world.

One of the beauties of this project would be the assembled location of these devices. If a launch opportunity arose, one of them would already be sitting in the launch country, and export restrictions and bureaucratic entanglements would not exist.

Even though certain aspects of a similar project have been espoused before, it doesn't mean it shouldn't be said again, only loUDER! Columbus spoke to several kings before he found one with the vision to commission his armada. With the recent proliferation of launch agencies world wide, the opportunity to bring such a plan to fruition has NOT existed before. We are on the cusp of a new era, an era where amateur space technology could and SHOULD flourish. (Or not). It's our choice! What's your choice? Mine? You haven't heard the last of me. :-)

Radio Meteor Observation Bulletin No. 70 June 1999

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. # = Strong interference of unknown source.
. + = 1/2 hour observation only.
. stopped the observations on May 29, due to severe interference.

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg (= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal generator. Sensitivity: 5 muV (modulation frequency 1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good), measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz) on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution. [Time and details of all individual meteor reflections are stored on file in the University of Ghent format (Prometeos), and are available for further analysis. Reduction software for DOS and Windows available].

May 1999

. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 2 hours

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
smallband resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Jiang

Observer: Will Kelsey

Location: Santa Maria, CA. USA (120 26' 9" W, 34 55' 58" N)
Frequency: 107.9 MHz
Transmitter Location: Sacramento, CA. KXOA FM, 50 kW at 362 km.
Antenna: Yagi FM 6 element. Heading North
Receiver: Sangean 803 A
Observing Method: Audio Tape.

Underdense/Overdense Scale:
Overdense: 1.0 second or more duration
Underdense: less than 1.0 second duration

Each observed hour is 60 minutes, exactly.

Note:
We are leaving California and relocating in Conway, Arkansas.
Therefore, it will not be possible for me to submit observations
until after we are established in our new home.

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both

transmitters is processed into same 40 Hz virtual
receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, another channel is used for automatic
interference rejection. Sampling interval: one 4096
point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also
available at http://www.qsl.net/oe8fnk

The meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value, to
show the reduced accuracy. Results for less than 20 min. observing time are
excluded.

Counts of reflections longer than 6.5 seconds, assumed

3 to 10	824
10 to 30	128
> 30	3

Corrections to the March observations in RMOB9904:
. the setup is totally automatic, with no human intervention of any kind.
. no data are deleted. All data recorded to computer disk are reported as a signal count.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.

Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
JST = UT + 9 hours
. the activity of Eta-Aquarids was observed from May 2 to 12,
and was like a plateau (no distinct peak).
. the receiving antenna was blown down by a gust of wind on May 27, 2h UT.
```

Sadao Okamoto

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz Width.
Antenna: Multi band Dipole antenna for HF and 50 MHz.
(Installed to confront North and South direction).
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours)
Distance: About 1,125 km from Lon Tan.
Receiver: Icon PCR-1000 all band receiver by computer controlled
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the "S" signal is received using a band pass filter (50 MHz)
and fed in to the D/A converter and computer in real time. Data
sampling system: using a 8 bits A/D card to PC/AT and "Data
Capture" software with 1/8 second sampling interval to store all
the
> 1.0 s reflections.

Note:
and compared to monthly averages since 1993. This did indicate some need to adjust the count and time parameter by some +15...20% to keep the curves comparable to the older ones.

Ilkka Yrjola

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

The guy studied CW so much that he got psychotic and started hearing CW from things which weren't there. :)

Another nice thing about CW is that you can under stand what the
Radio men were saying when you watch the movie "TITANIC".

Remember, use the fork, always.

Couldn't the receiver just have a decent AFC?

Oh, the items ("things" as you say), are there, and they can make
noices that sound like code. E.g., my washing machine sends Ds:
-.. -.. -.. -.. et cetera while it's running.

At first, 70 cm as an uplink seems to require doppler tracking by the
user, but if the satellite simply had a 30 KHz wide IF, then FM would get
through just fine without doppler compensation. Only penalty would be
about 3 dB in link budget. But the ground user can afford the added
3 dB uplink power.

The 2m downlink is required due to the 9 dB advantage. This reduces the
XMIT Power needed by the tiny satellite. AND the small doppler on 2m,
then does not require the users to have wide band receivers or to track
doppler.

This is just so easy, and there are so many schools that want to "build" satellites for their students to learn, and this project woiuld give everyone a "usable" payload, and a frequency plan from the git-go.

Subject: Is there hardware for tracking with linux??

Hi,

I'm trying to set up a ground station with linux as my operating system. I've already got some tracking software (sattrack v3.3), however I don't know where to get the hardware to use it with....

i.e. you can use trakbox (where do I get one) or Kansas City Tracker (is there a linux driver out there somewhere???)

Is anyone working on a KCT for linux driver???

I'd love to know.

Thanking you in advance

Keith Bannister

I have used Sattrack 3.3 with a homemade version of the AMSAT-DL rotor
interface. All the other interfaces mentioned are hopelessly complicated
and often much less clever in design.
(what happens when the computer crashes while the rotors are in operation?
on a KCT: your rotor burns out. on the AMSAT-DL interface: it just stops)

The AMSAT-DL interface is just two CMOS shift registers, a couple of
resistors, op-amps, and drivers to drive the rotor. When you have a
rotor with built-in relay drivers (G5400 etc) you can omit the relays
from the design. I built my home-made version in the control box of
the rotor, and interfaced it to two handshake lines of an RS232 port.
The remainder of the RS232 port is available for things like transceiver
control.

Subject: Is there hardware for tracking with linux??

Keith,

One resident satellite expert, using/developing Linux applications is
John Magliacane, KD2BD.

http://www.njin.net/~magliaco/
kd2bd@amsat.org

You might try asking him what course to take. I know there are not
currently any Linux drivers for the KCT, but rumors are there will be
soon. There are drivers for the Trackbox however. There are still some
of the kits available from time to time. Maybe someone will chime in
here.

You might want to consider a Basic Stamp project for positioning. If I
remember correctly, there was a project in the works. Check out the
list of stamp applications.

http://www.hth.com/losa.htm

73 and good luck,

Mike

Subject: What's the overall view on the future on ham/space ?

Lots in both to be agreed with.
As a relative newcomer I'd like to make the point
that it's two way communication that constitutes
amateur radio. There seems to be plenty of telemetry
and broadcast SSTV there already - too much may be?
Nice to receive but not what I got a TX ticket for...

Fair comment John, but I feel that having slow scan in space is very
beneficial and would not cause any undue interference with the bands as it
would most probably be isolated to a spot frequency in the 2 mtr range, but
i see your point when i listen to 20 meters sometimes.

but as they say a picture says a thousand words (or packet baaarps :-))

eavsdropper

Subject: what ham sats are heard ~"regular"

Eavsdropper,

Maybe you're not listening in the right places? Check the AMSAT web
site for satellite information and frequencies. Also, get the latest
kes, and a good tracking program. Try WINOrbit 3.5 from the AMSAT site.

http://www.amsat.org

What antennas are you using? With what radio are you listening to the
birds? How about your feedline? Preamps? Most of the birds would be
considered weak signal.

Here is a partial list of birds I know are working, because I've worked
them in the past few days:

FO-20
FO-29
RS-13
RS-15
MIR
AO-27
KO-25
UO-22
IO-19

1952. ZS2BWB, HA2RD QRV on AO-10

Newsgroup: rec.radio.amateur.space
Date: 1999-06-07 00:00:00 UTC
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>
Message-ID: <375BFD20.9033DD69@gate.net>
Source record: 12168

Fellow sat ops,

AO-10 has been hopping with activity the past couple days. I managed to work a few new countries, including ZS2BWB, Ken in South Africa, HA2RD, Andy in Hungary, and S92RS, Hardy, in Sao Tome. Also this weekend, I added another couple of countries, SP4LVH, Jerzy, in Poland, and LX2LA, Andrï¿½, in Luxembourg.

Hardy, S92RS created the biggest pileup I've ever heard on a satellite, with what sounded like 100 stations calling at the same time. It sounded a bit like I would imagine a descent into Dante's Hell would sound like.

73, and good DX, Mike

1955. Radio for satellite access

Newsgroup: rec.radio.amateur.space
Date: 1999-06-07 00:00:00 UTC
From: Ivan Galysh <igalysh@tidalwave.net>
Message-ID: <375C3A22.64367413@tidalwave.net>
Source record: 12171

I am getting into the amateur satellites. I was able to communicate with MIR. Now I want to talk to
other satellites. I am interested in the ones that do 9600 bd FSK. I have a 2m radio for the uplink. I would
like to get a receiver for 70cm that will not cost over $1000.00 I have been considering getting the
Hamtronics 70cm receiver and modifying it.
I am also looking at the Icom IC-PCR-100. I saw an add that said it can do 9600 bd packet which I assume is in the WFM mode.
Any suggestions on radios for less than $500.00?

Ivan

1956. Eight-Year-Old Elmers Directory Needs Elmers!

Newsgroup: rec.radio.amateur.space
Date: 1999-06-07 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <AbY63.29982$OL.718144@newscene.newscene.com>
Source record: 12172
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.policy,rec.radio.amateur.space

As readers of the rec.radio.amateur.* newsgroups are probably aware, I maintain a periodic information posting known as the Amateur Radio Elmers Resource Directory (aka the "Elmers List") which provides a list of net Elmers, indexed by topic, and their E-mail addresses. (For users of threaded newsreaders, this article is linked to the base article of the Directory itself). You may also access the Directory at:

http://www.novia.net/~pschleck/elmers/

The Amateur Radio Elmers Resource Directory is 8 years old as of March of this year. In order to maintain its value to the net, I have strived to keep it accurate and up-to-date. In addition to reviewing the currency of the entire Directory every 2 years, I am constantly scouring the newsgroups for new Elmers to join the Directory.

There's always been an implicit invitation for any qualified person to join the Directory. However, since I've lost the half of the Elmers listed due to attrition from the last biannual mass-ack (i.e., no response at their last-known E-mail addresses; the 50% attrition rate seems to be fairly predictable based on the last few mass-acks in recent years), I felt the need to send out this explicit invitation. I'd like to replace the lost Elmers with new, motivated, quality Elmers from the net. Areas of expertise that are most desirable for the Directory right now include:

- Any expertise from residents of states, provinces, and foreign countries not currently represented
- Advanced homebrewing techniques (surface-mount, VLSI, DSP, spread-spectrum, etc.)
- TCP/IP Packet Radio and Gateways/Internetworking (particularly local IP coordinators and/or subnet managers/operators/leaders)
- Amateur Satellites/Space Operation (particularly Microsats, SAREX, and ARISS)
- Amateur-related Software for Unix/PC/Mac/Amiga/Psion/HP-95/PalmPilot
- College Clubs and organizational guidance/strategies
- Boy Scout Amateur Radio Merit Badge Counselors
- Unix/Linux/X-Windows programming and configuration
- Amateur Radio Organizational Contacts (I am especially looking for contacts for the ARRL Field Organization, GRAPES, AMSAT, QCWA, QRP Int., NARA(?), QRZ, CSVHFS, LAMBDA, ARES, RACES, FEMA, NACEC, any state OES or EMA, as well as any regional frequency coordinating body)
- Band, Mode or, Brand-specific equipment (actual manufacturer or dealer contacts would be quite welcome, as long as they reveal their affiliation and at least provide *some* free services)

- Maintainers of unique amateur-radio-related anonymous File Transfer Protocol (FTP) sites and World-Wide Web (WWW) Home Pages (as opposed to those that are substantially a rehash of, or pointers to, existing sites).
- Maintainers of unique amateur-radio-related mailing lists
- Editors/contacts for amateur-radio-related publications

Although expertise in any other area would, of course, be welcome also.

I'd like to emphasize that participation is totally voluntary, with very minimal obligations (1 or 2 polite inquiries a month, if feedback from existing Elmers is any indication). If you find that it is too much work, you are welcome to bow out, no questions asked. You don't even need access to netnews, just a reliable E-mail address.

If you'd like to volunteer, please go to the following Web-based registration form:

http://www.novia.net/~pschleck/elmers/register.html

A neighbor once, after months of torture, intimated voices emanated from her washing machine. She was genuinely afraid to use the device, and was certain it, or her house was haunted.

A little investigative work, and a choke on a 75 ohm feedline which was radiating, cured her curse. There must have been enough oxidation in the motor coupling to rectify, and in some way the "bowl" of the washing machine was working like a speaker.

She sleeps better now. Not a CW story, but "voices" none the less.

Think about that a bit, Brad, then get back to us on how
the AFC would deal with the case of operators at different
latitudes in QSO. Only one of them would be in the (narrower)
IF bandwidth at a time due to the different doppler. How would
you propose dealing with that?

(The standard answer is to have the receiver scan when
there's no signal in its passband. But it couldn't scan
quickly in a weak signal environment or it would fail to
achieve lock, so the overs would be really slow, or weaker
stations would simply be missed by the scan.)

AFC isn't a solution at all for non-constant carrier modes,
and those make the most efficient use of the limited power
available to a satellite. We pretty much have to design to
accomodate the doppler shifts the satellite will see. That
means either a wider IF bandwidth, with the result that we
need more uplink power to maintain a reasonable SNR,
or we have to use doppler compensation on the ground.
The latter requires the radio to know the orbital elements
of the satellite, and the ground station's position on the
Earth. Our tracking programs can supply that.

Perhaps he can't. If we're talking about handhelds, a jump from 5 watts
to 10 watts would require an external amplifier and battery pack. Doppler
tracking only requires turning a knob.

>The 2m downlink is required due to the 9 dB advantage. This reduces the
>XMIT Power needed by the tiny satellite. AND the small doppler on 2m,
>then does not require the users to have wide band receivers or to track
>doppler.

If the user uses an antenna of the same physical size on 2m and 70 cm,
the illusion of a greater path loss for UHF disappears. In fact, if the same
physical size is maintained for antennas at both ends of the link, going
to a higher frequency reduces the apparent path loss. (The only reason
that there is an apparent increase in path loss with increasing frequency
is that physically smaller antennas are used, IE their size is held constant
in terms of wavelength rather than in absolute physical size, so their capture
area decreases. But we don't have to do it that way.)

We'd be better off uplinking at the lower frequency, since that imposes
less of a doppler challenge to the satellite's receiver, so it can run a
narrower IF and gain a SNR benefit. Then we can use a 70 cm antenna
sized to have the same capure area as a 2m antenna on the ground, and
not suffer the apparent path loss due to decreased capture area. The
operator would have to track doppler during receive, but that's not that
difficult. It's easier than trying to anticipate doppler on transmit, and
cheaper than attempting to double transmit power.

Yeah, my grandparents used to have a house next to a HAM and my grandparents had a lightbulb in a lamp that talked
everytime the HAM keyed up.
Also, I had a HAM right down the street who just two years ago was making my soundcard talk.
Someone must have complained about him as he and his tower were gone less than a month after he was talking through my soundcard.

The idea is that, with typical NBFM bandwidths and typical doppler
as present on 2m and 70cm with LEO sats, the receive filter is usually
wide enough to see the presence of a station, but the signal will be
too far off-center to demodulate it distortion-free.

The AFC circuit can pull the signal to the center of the filter.

Of course there is always the problem that the AFC will either destroy
the LF demod response or will be slow acquiring the signal.

>(The standard answer is to have the receiver scan when
>there's no signal in its passband.

That would be necessary from 23cm and up (and on 70cm when you would
use relatively narrow filters like 12.5 KHz channel-spacing NBFM filters)

Bob,

I have been thinking about your last response a lot. I have a few comments. My proposal for a dual operation constellation of sats containing a 2 meter digipeater for UI and APRS packets, as well as a mode J bent pipe subsystem per my last post, would, in my opinion, be easier for the portable, possibly handheld operator, that a mode B FM system. Allow me to explain.

A 3 db link budget is substantial for a 70 cm handheld device. I use a cat whisker antenna for AO-27 now, and the 70 cm downlink is marginal. If I were to use the same antenna as an uplink radiator, the 3 db link budget would probably keep me out of the bird. I would be forced to carry a small yagi, or perhaps a turnstile or Lindenblad antenna with me, or double my power (carry a small amplifier?) to make up that 3 db. If the bird had a 30 kHz wide IF, the signal to noise ratio would probably require an even stronger signal.

Doppler correction on an FM bird is really not too difficult on a mode JA FM bird. For instance, on my FT50, which I use regularly for AO-27 QSOs, has 5 frequency pairs programmed in for Oscar 27 operation:

436.805/145.845
436.800/145.850
436.795/145.850
436.790/145.850
436.785/145.855

I start off with the first frequency pair, and tune "down" as the bird approaches, then recedes. It works quite well, and a rubber ducky will work.

For what it's worth, we will all get a chance to try a mode B FM bird soon, when AMSAT LU launches VOXSAT. I pulled this from their web site:

C.- Operation modes & frequencies

Downlink frequency one : 145.990 MHz FM, (Voice & Telemetry).
Downlink frequency two : 145.910 MHz FM, (cross band repeater uhf/vhf)
Uplink : 435.990 MHz FM

Their website is: http://members.xoom.com/Amsat_LU/

I am very anxious to try out this bird, and this mode portable.

Speaking of LUSats, Richard, G3RWL, tells me that LU-19 is in digipeat mode. It seems this bird, with it's wide coverage might be a good candidate for some APRS experiments. Have you ever experimented with

this bird and UI packets?

73, and thanks for your kind words Bob!

> this bird and UI packets?

Absolutely. There are 3 perfectly good 1200 baud AX.25 digipeaters in space right now. AO-16, LU-19 and IO-26 ANyone can digipeat through them, they are practically unused over the USA on every pass. ANY TNC can be used to transmit to them on 2m FM with a simple $3 modification to make the output MANCHESTER.... AND THEY CAN ALL LISTEN ON 145.90!

I have been preaching this for 3 years, but just cannot get anyone interested. Problem is that the downlink needs a full blown PSK TNC and UHF ALl mode and doppler correction and antenna tracking. With APRS, this is OK, tho, because we only need 3 DOWNLINKS feeding the worldwide APRS Internet system so that everyone can see the dwonlink. But it is a chicken-egg problem.

No one is transmitting so I cannot convince anyone to set up the automaticed DOWNLINK. And I cannot convince anyone to transmit because no one is listening! What a waste of 3 on-orbit digipeatrers!!!

See my WEB page, and past papers in AMSAT proceedings:

Hi - noticed a lot of spots on the DX Cluster for AO-10 contacts recently and some discussion here. I would be interested to know what power / antennas you are using to get reasonable results on both the up and downlink.

I have had QSO's through RS12/13 but not ventured to the dizzy heights of AO-10 (as yet).

I have read a number of articles on the web / AMSAT site etc but be interested to know first hand what people are using for this bird.

Upgrading my satellite station and have the following Icom
radio equipment for sale that will be
the envy of any satellite or terrestrial VHF/UHF operators.
Will sell separately or consider offer
for the entire package:

IC-271H ï¿½ 100 watt all-mode 144-148 MHz transceiver with
internal power supply, manual, hand
mic, internal pre-amp, and very rare UX-14 computer control
unit installed. Good condition.
$650.00 OBO shipped CONUS.

IC-471H ï¿½ 75 watt all-mode 430-450 Mhz transceiver with
internal power supply, manual, hand
mic, original box, and very rare UX-14 computer control unit
installed. Very clean condition.
$750.00 OBO shipped CONUS.

IC-1271A with TV-1200 ï¿½ 10 watt all-mode 1240-1300 Mhz
transceiver with internal power
supply, manual, hand mic, original box, and very rare UX-14
computer control unit installed.
Also has installed the exceptionally hard to find TV-1200
television adapter for sending and
receiving amateur fast-scan television using any camcorder
or other video source. Exceptionally
clean condition. $1,100.00 OBO shipped CONUS.

CT-16 Satellite Interface Unit allows any one of the above
radios to control tuning of another to
keep satellite uplink and downlink frequencies
synchronized. Like new. $100.00 OBO shipped
CONUS.

IC-SM6 ï¿½ Deluxe Electret Desk Mic with built-in pre-amp.
Works with any of the above radios.
Very clean, with foam wind screen. $60.00 OBO shipped
CONUS.

Fellow sat ops,

You've made a rare contact. You don't want to wait for the bureau to route a card exchange. How do you find the address?

An easy way is to look up the call on a server available through the worldwide web. Unforunately, many links to callbooks on the Internet are stale.

I am starting a list here, of links I KNOW are viable (at the moment). If you will send me some missing links, I promise to recompile this list and repost as a faq, as well as make sure it is available on the AMSAT site.

EVERY link I've found for the UK and Germany are stale. Where are the servers? I have a French link, that has worked before, but is not intuitve to non-native readers; I can't remember how to use is.

For this list, we need any servers commonly available on the Internet. Thanks for your help. Here is what I have:

++
Domestic US callsign servers, contain some non-USA calls:

Buckmaster's

OK, here's a quick question:

I managed to get Slovenia recently, but the new CD of the Callbook I picked up last weekend (hamfest), doesn't work. Anyone know the IRC rate for this country?

Any help much appreciated.

Thanks,
Andy

Want to reduce the footprint on my desktop and wishing to trade my perfectly running AEA mother of all TNC's for a KAM new model...

Have all docs. Have used this extensively on sats and terrestrial 9600bd, pactor, amtor, etc.

Rub is all I have time now for is Navy MARS and I want something smaller for the desktop.

Willing to sell the unit too for $325 outright.

Thanks.

Source record: 12113

hi all
i am looking for a little tx for the 450khz to 1600khz band
and i also will need a roof top antana.
now the most power i will need is 5 to 50wats (for a.m. i need the
extra tx power)but 5 wats is as low as i can go. (i can use a amp
latter on to bost the power up)
eney one have eneything????

i an working with the fcc so can start a low power station ,

and with luck by 12/25/99 K-WACO WILL BE ON THE AIR WITH "SUPERMAN
LIVES"

but i have to start puting things togather NOW,
maybe at long last i can be usfule agin.
due to health i just cant do much now and i will naver de the man i
used to be, but at lest i can steil chang a tap/racerd/cd.
and steil get all the rest i now need (this forced retirment is the
pits)
this station is just to help the town and at the same time keep me form
going NUTS

PRESS RELEASE - PRESS RELEASE - PRESS RELEASE
====== Dateline: June 16, 1999 - Agana, Guam
====== Credits: Staff Reporter Jim Kehler, KH2D
PRESS RELEASE - PRESS RELEASE - PRESS RELEASE

News Wire Flash - The Beat Goes OFF !!!!

A new amateur satellite will be launched in late June as the results of a joint venture between No-Code Interntational(tm), and Swatch, one of the other world leaders in poor public relations. Swatch was in the news recently when they botched an attempt to launch commercial advertising on a Russian amateur satellite. We don't need to tell you about what NCI has botched lately.....

The satellite, named Dumb-Me-Down-Nik will feature a digital voice beacon that will repeat "CHEE WA WA - MORSE CODE SUCKS - WANNA BUY A SWATCH?" every 30 seconds as it orbits the globe. The beacon text is based on three things - NCI director Carl Stevenson's favorable trip to the HF spectrum in Mexico, NCI's policy, and the fact that Swatch's numbers haven't been looking so good lately. The beacon will be broadcast in the amateur VHF band, as most NCI members only own VHF radio equipment.

The satellite will also introduce NCI's new concept of keeping time, called 'BEAT-OFF Time' and will measure how many 'BEATS' there are left until Morse code testing is officially 'OFF' the books. An official figure on how many 'BEATS' remain has not been released yet, as nobody at NCI seems to be able to count that high. It is rumored that Fred and Bruce are looking for the calculator, and we are awaiting further information on when the big Beat-OFF will occur. NCI promises to email all members with exact information so that they all are sure to 'lend a hand in the final countdown'.

Director Carl Stevenson, NCI's main visionary, was quoted as saying "Here at NCI, we are hoping the FCC will release information at the VE meeting in early July. It sure would be neat if it was the 4th of July, as I imagine most NCI members would love the Beat-OFF to be in conjunction with all those fireworks. After having had both hands in this for so long, I will be extremely happy and very relieved when the Beat-OFF is over."

NCI is now seeking additional partners in the venture to help finance the four AAA batteries needed to power the digital voice talker. Swatch refuses to buy batteries, saying the last time they bought some they were forced to give them away.

QSL cards, in electronic form only (email) will be available to all NCI members to confirm reception of the digital voice talker beacon. An anonymous NCI director said that the cost of postage stamps to mail real QSL cards was unfortunately beyond the scope of the current NCI budget. It has recently been rumored that Fred is again begging for money, so real QSL cards are remotely possible, but NCI says "Don't hold your breath".

NCI's Vice President of Demotivation, Billy "Beany Baby" Sohl, when questioned about the details of the launch, said he was busy looking for the fuses for his model rockets and said that the only public statement he chose to make at this time was in the form of a question: "What's a Morse Code Woodie ???"

CHEE WA WA - MORSE CODE SUCKS - WANNA BUY A SWATCH ?

NCI - BEATing OFF Amateur Radio into the 21st Century !!!!!!!!!

'NCI' is a unregistered trademark of No-Code International.
'NCI' is also a registered trademark of the National Cancer Institute.
'Swatch' is the name of a company that sells silly looking watches.

Yaesu FT-8000R FM dual-band mobile for trade for 144MHz multi-mode transceiver
(identical to current model FT-8100R except without removable control head).

Very clean, <50 hours total use, no mods, non-smoker, never mobile.
118-520 MHz (incl. AM AIR), 760-1300MHz RX, less cellular
9600 packet-ready (dedicated DIN data connector on back)
dual-receive, seperate gain/squelch controls for each band

All the newest bells and whistles.
With DTMF Yaesu mic, manual, and schematic.

Will *TRADE* for a 2-meter all-mode rig in good condition.
Let me know what you have. Trades only please. Thanks.

Curious, not challenging what you say here: what do you mean by "I am working with the FCC so I can start a low power station"? Have you applied for a license? How can I find out more about this; I have been to the FCC's web page about Low Power FM broadcasting proposals, and it doesn't mention the AM BC band even being on the table for consideration in this. Please advise.

BWAAAAAAHHAAAAAHAAAAAAA!
I doubt that Algor could spell internet. The "internet" has been around since the early 1980's. It used to be call BITNET and was basically a university to university network and the government had nothing to do with it.

Have you noticed that Algor is gradually distancing himself from the president? I think that George W will be our next president.

Kevin, WB5RUE

In the 1960's they took prayer and the Ten Commandments out of our public schools hoping to liberate a generation. They succeeded. Now we have a generation who thinks they have the liberty to lie, cheat, steel, kill....

Facts, please! BITNET was indeed a university-to-university
network, based heavily on (shudder) IBM mainframes. Is
mitvma.bitnet still around?

However, it had nothing to do with what we now call the
Internet. This is a descendant of research work done in
the 1960s, resulting in the ARPAnet of the 1970s, which
grew into the current PetRockNet of today.

Not that this silly thread has anything to do with amateur
satellites...am I missing somnething here?

Trying to close a deal for a FT-290R, and the seller says his unit only puts out 2.5W, not 25W, in the high power setting. All of the references I have seen to the FT-290R claim a 25W hi power output on all model revisions. Am I missing something here? Was there a FT-290R that was only capabable of a max of 2.5 watts out?

Dead? Just how old are you? < Sorry I could not resist...:-) >

I really doubt allot of Technician class operators know who you are, or really even care. Don't take yourself so seriously. October was just a guess as to when the FCC would reallocate the bands, I really do not know. Out of curiosity, why did you not choose 14.060? That would have driven your point home a little more.

But this is a satellite newsgroup, why not meet up on FO-20 or FO-29 SSB? I have not collected enough antenna to work AO-10 yet.

Warmest Regards

50. But the fact that I need to expire has to do with my use of Morse code, not my age.....

>I really doubt allot of Technician class operators know who you are, or >really even care. Don't take yourself so seriously.

I'm one of those 'pro coder' people. At least that's what they tell me. A lot of technicians want all of us 'pro coders' to dry up and blow away, as part of the new program to 'fix' amateur radio. But don't ever worry about me taking ANYTHING seriously.....

>Out of curiosity, why did you not choose 14.060? That would have driven >your point home a little more.

Because you said you wanted to TALK on the radio, so I assumed SSB. 20 meters is the best band we've had lately for propagation to the U.S. W5's I was listening to at 1400 GMT were all well over S9 out here. I assumed you were in the U.S., based on your call.

Had you said TYPE on the radio, I might have said 14.060 because that's a frequency commonly used for digital modes. I wasn't trying to make any points, I was trying to make a sked to talk to you.....

>But this is a satellite newsgroup, why not meet up on FO-20 or FO-29 SSB? I >have not collected enough antenna to work AO-10 yet.

Two reasons. One, footprints. You and I will never be able to talk to each other on FO-20 or FO-29 unless you move to Japan or Australia. I'm not planning on moving to your country any time soon. Two, my satellite carreer is over, I gave my antennas away to an aspiring technician class satellite operator..... wanna buy some satellite modems or a UHF preamp ? I think I have another KLM UHF beam out in the carport, I'll throw that in as a bonus if you want to scrape the Pacific island corrosion off it.....

Some interesting responses there guys, but what I am asking is this. With all the good skills and knowledge that there is within our community coupled with the ability to "make things out of nothing"
what would you estimate it would cost for us to make a GEOstationary ham satellite (in it's basic form ie. the ability to act as a repeater) and to maintain station keeping per year ?.

It just seems to me that I have heard all these quotes of "blah blah" amount of currency for an semi-reliable non-geostationary sat and I really think that with all the brains and skills that I have seen from some people out here a lot more could be done than is currently done with ham sats if people REALLY got serious about doing it and spent less time spending money on administration and competition between groups ?.

perhaps I am being a bit green or under-informed about it all but where there is a will.....there is a way !

yes/no

Message-ID: <87k8t1t2b1.fsf_-_@mongrel.kd6pag.ampr.org>
Source record: 12055
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.space

This has long ago become off-topic in 'rec.radio.amateur.space', in spite of the subject line.

Please do not post discussions on the interminable CW debate to this newsgroup. It is ordinarily a relatively low traffic newsgroup, and when the CW debate gets cross-posted here, it generates grossly more traffic than all other postings combined.

>>> Do NOT cross-post the CW debate to 'rec.radio.amateur.space'. <<<

If you do not know how to remove 'rec.radio.amateur.space' from the list of newsgroups you will be posting when replying to these postings, then lease do NOT reply.

2029. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-06-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7kcc0h$2gs@news.Hawaii.Edu>
Source record: 12138
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hello Will,

The 25w output is optionnal on the FT series. In the Yaesu catalog, you will find 2 references : 1 for the FT290R 'nude' coming with mic, antenna and battery (2.5w) and another reference with the 25w amplifier.

Bye,
Philippe

I think ther were two ft-290 modles, the first was did have just
2.5 watts or so and the second, maybe it is the R modle or maybe it
has a II or mark II on the end of the 290 part. The second version
usually came with a amplifier that straps on the back to get to 25
watts. YOu had an option ot take it off and strap on a battery pack
and use the bnc connector on the front to get about 2 watts out

Depending on how elaborate a satellite you're building
and how much of it you can scrounge, anywhere from tens
of thousands to a couple of million US dollars.

One typical big-ticket item is solar panels, which cost
a fortune. The days of $26 satellites are long gone.

Roy Neal is the chairperson for the SAREX Working Group. The other SWG
members are
Frank Bauer KA3HDO representing AMSAT-NA.
Matt Bordelon KC5BTL representing NASA. (Matt is the SAREX
Principal
Investigator.) Matt is vice-president of the Johnson Space Center
amateur radio club.
Rosalie White WA1STO of the ARRL.

The SWG reports to Pam Bacon at NASA Headquarters. The SWG and staff
were the ones that briefed NASA International Space Station (ISS)
management with requests for a permanent amateur radio station on ISS.
Everything that was asked for by the SWG was granted by the ISS
management.

Of course not. I build all my own amateur satellites. But I never use old parts out of junk TV's, like Jeff does. I use all new parts. And the last one I built cost me $ 42,326,219.65 (U.S.), not including labor and the launch......

Actually for a small sat the solar panels wouldn't cost all that much.
With the low power output they use it wouldn't take much wattage or amps.
My mobile rig running 5 watts uses 3 amps, a small sat could use 1-2 watts and
get out just great.

73!

The issue here isn't building the sattelite it's the launch costs to get it to
Geostationary Orbit. Reliability also isn't the issue. As a general rule, the
sattelites launched under the AMSAT banner have been pretty reliable eg:
multi-year lifetimes. We 'have' the technology, we just can't afford to pay
for a commercial launch, no matter how well we can build a sattelite.

Your basic 'answer' is probably anywhere from $100,000 to $1,000,000
depending on how complex you want to build it.

The only 'paid' position within AMSAT is the secretary. Everything else is
volunteer. This includes ALL of the technical positions and administrators.

The only other 'administrative costs' are those absolutelly necessesary to run
the organization.

If you would like to add your valuable skills to this list, AMSAT (or
your regional AMSAT affiliate would be very happy to talk to you.

funny you should say that Tom, I recently looked into solar panels for my house and WOW what a rip-off !. In an age where we are all supposed to go "green" the manafactures must think that we ARE green to pay some of the costs for panelling (in the UK anyway) :-(

5 watts from 3 amps (I assume you mean at 12 volts) amounts to only 14%
DC-to-RF efficiency. Fortunately, our satellite constructors can do better
than that!

Hi Ian,
It's expensive over here in the U.S. to do a house with solar too. But
a small system isn't too bad. A lot of people (myself included) use small
panels to charge batteries to run ham gear (or lights in case or power
outages). I just bought a 16.5V, 300Ma, 5 watt panel and charge controller for
$116. I have a smaller 3-9V panel I use to run small portable AM/FM radios
with or to charge smaller batteries.

73,
Tom

I don't think anybody is advocating the removal of CW allocations (other than some of the Novice space), just revolving HAM radio around it as a cornerstone. I certainly hope you do not leave the community because of that.

> I'm one of those 'pro coder' people. At least that's what they tell me.
> A lot of technicians want all of us 'pro coders' to dry up and blow away,
> as part of the new program to 'fix' amateur radio. But don't ever worry
> about me taking ANYTHING seriously.....

It is my opinion things are not as broken as many make the service to be. Some re focusing is may be in order. I am more of anti singular mode rule type. I think you have to agree that trying different modes becomes a good learning experience. Yes that includes CW.

>
> Because you said you wanted to TALK on the radio, so I assumed SSB.

Actually 14.060 is a QRP frequency around these parts. Sorry I did not catch the fact your QTH is out in the Pacific. I belong to the QRP club here because they are one of the few groups that actively homebrews. A lot of knowledge is passed around at the meetings. I did say talk, but I do notice the 'pro-coder' bunch I have conversed with view CW QSO's as a conversation. My bad.

UHF
> beam out in the carport, I'll throw that in as a bonus if you want to
scrape the
> Pacific island corrosion off it.....

Thanks, but I have to respectfully decline the offer. I have collected a DSP-2232 and a RFC 4-110 that I will be pressing into service very soon on the end of a home spun helix. I really would like to work AO-10 on a regular basis, but must do so with antenna covenants / restrictions in place. This is really cramping my 2 meter downlink antenna options. I am thinking of making a pair of corner reflectors with maybe 3 to 5 directors (perhaps even an endfire arrangement?). I can presently work most of the LEO's with homespun turnstiles in the attic.

Hope you reconsider your opinions of some of us Born Again Amateurs.

Warmest Regards

Christopher Cox

NOBODY is advocating barring CW operation from the Novice space.
All anyone is advocating is CW and SSB/AM sharing those typically
unused Novice frequencies.

hi, I have recieved a reply that shows I am reaching the satellite, using an icom

ic25a transciever, was copied in Utah. I am trying to use a Pro 2006 scanner as
the reciever, with a firestick cb antenna, and not having any luck recieving. I
searched from 436.8 to 436.79 and didnt hear anything, but could have missed it,
or the antenna is wrong, or something.
I am going to try a corner reflector cut for the 436.8MHz, and see what happens.
any comments?
thanks for the reply,

For starters check this site for an idea of prices:

http://www.windsun.com/

That's where I bought the Unisolar panel and charge controller I mentioned
above. Prices elsewhere here are about the same more or less.

Hi Hi Hi Jim -

Yours was a good post. The only thing I didn't like about it was that
you mentioned a trade mark named by that mid-European time-piece maker
and thus they acheived what many of us would like to prevent. YOU
HELPED THEM ADVERTISE...Is that supposed to be an AMATEUR SERVICE?
Volunteering to advertise without getting paid is IMHO neither
amateurish or professional BUT it could be dumb!
No offense meant,
Please keep thinking (with good non commercial humor if possible),
Bob Wex w2ilp (International Logic Provoker)

I only ask you please,
With ticks dont' feel at ease,
A time-bomb is a fatal trick,
Time increments with every tick,
And ticks cause lyme disease!

I'm interested in standard time,
But if I don't get paid a dime,
I'll not repeat the silly name,
Of a watch..just to give it fame,
Or just to make a WATCH word rhyme!

You will be interested to know that the very first amateur satellites were indeed inband, two meter satellites! Sure would be nice if we could do better than that rather soon with phase IIID. Cliff K7RR

Although Phase 3D has a flexible matrix that allows connection between arbitrary receivers and transmitters, it cannot relay in-band. The uplink and downlink frequencies in the bands where it can both uplink and downlink are overlapping.

The transponder bandwidth on 2M is already limited by the available space in the band, so it would not be a good idea to split it. Operating in a single band would also require very sharp filters, which tend to be large and heavy.

The weekly AMSAT News Service gives the current status of the amateur satellites along with their up/down frequencies and their operating modes.

You can view the current ANS at http://www.amsat.org/amsat/news/ans.html and clicking on Weekly Satellite Report will take you down the the satellite status information.

2069. Re: MIR voice on 444.825

Newsgroup: rec.radio.amateur.space
Date: 1999-06-21 00:00:00 UTC
From: John Mock <kd6pag@qsl-nojunk.net>
Message-ID: <87zp1t71qf.fsf@mongrel.kd6pag.ampr.org>
Source record: 12085

Just heard very good audio from MIR on 70cm.

Are these QSO's random?

Yeah, nearly all MIR contacts are random QSO's. I believe the only time that Third Party traffic can be conducted is when they have an amateur on-board from a country that permits such traffic. So we don't see the scheduled SAREX-type contacts that we get from the Space Shuttle.

But the frequency given is not a customary one. The usual frequency is 145.985 (simplex) and the ones on 70 cm are:

Mode 1: FM repeater with CTCSS sub-tone 141.3 Hz.
Downlink 437.950 MHz
Uplink 435.750 MHz
CTCSS

Mode 2: 9600 Baud (G3RUH compatible) Packet Operation.
Downlink 437.975 MHz
Uplink 435.775 MHz
No CTCSS

Mode 3: Pre-recorded digital voice beacon, and may be used for contacts with the MIR crew.
Downlink 437.925
Uplink 435.725
CTCSS

Except that 70cm has not been reported as being heard in at least a year.

So i would suspect someone locally had a rig in cross-band repeat mode, with an output on 444.825 MHz. However, this does remind me to listen for MIR, and check if 437.925 or the SAFEX repeater is active again. The best way to tell if it is terrestrial to check for doppler. If the SAFEX repeater is active, it will start at a pass at 437.960 and end at 437.940 (with the opposite correction on the uplink).

A couple of Voice contacts have been reported in the past few days, which is news by itself. Thanks for the report.

Remember that MIR operates on Moscow times, so don't expect random QSO's in the middle of the day over North America.

I've had some limited success with an ICOM W-32A HT connected to a homebrew 6 element yagi cut for 436.8. Using a duplexer and a Premier AL-800 connected directly to the duplexer I've made contact twice now with my rig. I suspect that I could use more ERP with a higher gain TX antenna, but that project will have to wait.

Also there are great articles on working the AO-27 at the www.amsat.org page. One of which is http://members.aol.com/dquagliana/beginner.html by Doug Quagliana.

Hope to hear you sometime. 73

I am not even sure why ht was on that frequency, onlyother one ham within a couple of hundred miles of where I live and I don't think he was running anything. Kind of a thrill to hear though.

That is indeed true! You should realize that even that far back, Ed Hilton, Don Norgaard and I successfully designed an INBAND crystal filter which would relay 2 meter inband signals! I think the original message was asking that very point, although no one including me would ever propose such a nightmare-ish project nowdays! Cliff Buttschardt K7RR

Hi Todd,

at last years AMSAT meeting in Vicksburg, Bob Bruninga, hooked up his TH-D7A to a Toshiba Libretto that Steve Bible had loaded WiSP onto.

Bob held the TH-D7A in one hand and a 3 ele antenna in the other, Steve held the Libretto, and I stood under some shade with another laptop running some tracking software (actually JStation - my Java coded pacsat software) and was shouting out the azimuth, elevation and the doppler corrected frequency so that Bob could point the antenna correctly and adjust the frequency ;-)

The TH-D7A was put into packet mode, then set to 9600 and then KISS was turned on.

WiSP was setup to capture all, and for receive only as the TH-D7A does not work cross band in packet, and the one Bob had was also hanging on transmit for some reason.

Data was collected without any problems, just couldn't request any hole fills.

Not sure if the TH-D7A has been fixed for cross band packet or if there are any mods. You might want to contact Bob directly (bruninga@nadn.navy.mil).

regards,

Is it possible to send computer files over Amateur
satellites. Like computer images or voice files.
What kind of transmittion rate would you get?
Thanks

Of course. Typical transfer rates are 9600 baud, with
hooks in the file transfer protocols to allow an up- or
download to span more than one pass of the satellite.

This is discussed - in detail - in all the amateur
satellite references.

I have just been mass-emailed by the despicable G8ASO about his stupid club and even worse web site, although it does appear to have been slightly improved over the last few months.

See what you think, try http://www.laughingpoliceman.com

Some of the new links are quite good and rather unusual.

Yes. 9600 baud, plus or minus QRM.

>download to span more than one pass of the satellite.

My experience in the days I was still QRV on satellite is that your net
transfer rate will be *very much* below this theoretical 9600 bps...

On upload, this was probably caused by my attempts to use inferior
commercial FM transceivers. But I always had considerable trouble
uploading large files. Sometimes there were brief periods of reasonably
quick uploading, but usually every packet had to be retried 2-4 times.
This meant that uploading a few hundred KB required 1-2 days worth of
passes.

On download, you are sharing the 9600 baud channel with 10 other stations
rotating in the download queue, plus the telemetry and the acknowledgements
to uploading stations and download requesters. This means that even with
very few downlink errors you won't get more than 5-10% of the expected
1Kbyte/second for a single file.

But yes, it *is* possible to transfer computer images or voice files.

Rob

2084. ULS: FCC allowed to collect your phone number /e-mail and publish it

Newsgroup: rec.radio.amateur.space
Date: 1999-06-24 00:00:00 UTC
From: mf_luder@my-deja.com
Message-ID: <7ks944qed1@nnrp1.deja.com>
Source record: 12000
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.amateur.space

The ham part of ULS which requests your e-mail address, the usual info, plus your SSN or TIN and YOUR PHONE NUMBER is due to start in August says lamb to the slaughter ARRL. FCC is out of control.

Let's ignore government abuses, because paranoid is the usual ignorant reponse of most morons.

A hacker can get your bank info if you use direct deposit for any government checks (like that Social Security all you retirees like), will have your e-mail to infect you wth e-mail viruses, etc.

Think it can't happen ?

If the FBI, State and Defense are being defaced once a week for a month, they'll steal your private data just as easily.

Why does FCC need your phone number, when they have your addrss ? That's absurd ! Furthermore, now your phone number and e-mail will be, without your say-so, public, if you want your license.

Try the online form; no phone number, no filing !

How about the thousands of old or disabled or low income people who will need to comply ? They won't have internet connections. What a way to thin out the technologically behind hams ! FCC says sign-up on paper; why ? if you can't derive any benefits to begin with ?

> HERE IT IS !!! CHOOSE YOUR UNLISTED PHONE NUMBER OR YOUR HAM LICENSE.
>
> In addition, all information provided in this form, except Taxpayer
> Identification Number, will be available for public inspection. If you do
> not provide the information we request on the form, the FCC may delay
> processing of your application or may return your application without
> action.

They say they have this right because they need the info to collect revenue. Where are the license fees then ? Most people don't have vanity calls ! There goes that rationale.

Plus, they need your phone number ? Why ? When the Coast Guard gets fake distres calls 9 times an hour because of the unlicensed service ? Why are we to be cataloged more closely than the life-or-death marine radio service ?

Plus, now for the first time in the history of the ARS, if someone doesn't like what you have to say, even an SWL, well, heck, they can just look you up and give you a PHONE CALL...

> Thanks
> Pat Nassaux

You can upload/download any file type to the satellites.

You would have to watch the size and number of the files as all the satellites have limited storage capability and uploading a large number would cause older message to be deleted to make space (possibly before all interested parties had downloaded them).

Currently there are satellites operational with 1200 baud and 9600 baud downlinks. The actual downlink transmission rate would depend on how many people are using the satellite as it shares the downlink between all users with each file/directory request put into a queue. The request at the front of the queue gets an amount of time to send packets, and then is put to the end of the queue. On the popular satellites over heavy use areas, the queue can be quite long (they do have a maximum queue size though).

UoSat-12 (UO-36) will be coming online in the near future. This has more storage capabilty and also has a 38400 downlink, and also a 1MB downlink on Mode S, although I am not sure how/if the general user will be able to make use of the 1MB downlink.

UoSat-12 has a some excellent earth imaging capabilites, so a fair amount of memory is used for storing these images.

Sounds like maybe the radio isn't the problem, Ken. 'Device not
available' is a com port error, usually. You may have the software
configured for the wrong port. A 'DLL' file is a file Windows needs
for subroutines.

FT Manager is a good program, not sure it works with the 736R,
but plug it into a search engiine and have a look at the web page.
You can download a demo version.

hi there,
I have set up a satellite workstation in my shack and would like to
get into digital satellites as well, at the moment I do not have any TNC
sets, a bit confused on what to buy, too many brands and not sure which will
do the job!

I need info on the PSK,FSK TNC's to use and how to set them up.

My current radio gear is:
Icom 820H
2m 9 turns Helix
70cm 16 turns Helix
AZ/El rotators
20 feet RG213 coax
2m Icom pre-amp
Icom756 HF/6m transceiver
Cushcraft R6000 vertical antenna
Compaq notebook

that is all,
73 de VK6BOS Nick

634 MHz? I think that is a bit unlikely... it is in the middle of the UHF
TV broadcast band.

I've attached a nice summary article from the ARRL electronic newsletter
about the DSP experiment that will be conducted on STS-93 using SAREX.
Everything is still on schedule for a July 20th launch. The Flight
Readiness Review on July 8th is a critical milestone and the launch date
will be finalized in that meeting...

There was also a piece with Owen Garriot about the future of amateur
radio in human space flight.

Jim -

If you're interested in range (and azimuth, elevation) from an
arbitrary location on the earth, I think you might have to buy the
registered version (I bought the pro version). I've attached a screen
shot of Orbmaster with a graphics window and a text window that
displays az, el, and range. You can tell if a satellite is in view
from the True/False columns.

Good luck
Alisa

Yep I got that freq off Dr. Dish's website - I also saw some photos on one of the Russian Space sites describing the antennas outside the Zarya - there were 400 mhz and there were some that were indeed labeled 634 mhz - But so far, I have not heard anything on that freq - anyone know of any printed 400 mhz freq for Zarya?

I want to thank everyone who was on AO10 990627! It was my first attempt at this bird and never thought the downlink would be so strong. I actually thought the beacon was being covered up by QRM because it was so strong... It was the beacon! My little Arrow antenna on a tripod worked A010 for two(2) hours. All this while the guys down the block working HF (80,40,20) where complaining about poor conditions. Thanks to DG3SAA, OZ7SAT & OH2LMK, a couple of eyes have been opened.

What a blast!

Perhaps I can clarify the frequency. If you have the right equipment it is
possible to monitor signals on the telemetry frequency of the ISS
(installed in the Zarya) around 634 mc/s. To hear the transmissions put
your receiver in the USB mode. Be aware of the very quick Doppler effect
so scan the spectrum between 634.200 and 633.830 mc/s.

I don't see how they could downlink this telemetry on TV ch 41. My
freq. allocation chart doesn't seem to provide this as even a secondary
operation.

Although, a simplex, store-and-forward voice repeater would work
successfully on two meters. A maximum of 15 seconds of voice could be
stored, and then rebroadcast on the same frequency, or even a different
frequency. That wouldn't require the very bit, heavy hi-Q filters
needed for in-band full duplex repeating.

This is not something a dummy can make his own of. 1600 MHz construction
requires some experience.

(the fact that you apparently need only a pre-amp makes it slightly
simpler. not mentioning this, most people will assume that you want a
converter to 137 MHz, as this is the usual approach)

Hi Ron
I don't know on the Lindenblad being made commercially. There is a half wave loop antenna made that has some gain. Check this web page. The prices look reasonable. They have them for 2 meters and 70 cm.
http://www.kb6kq.com/flyer.html

Hi Ken
I'm running InstantTrack V1.0V which is the V1.00 with patch #4. I have no problems loading NASA type elements. I down loaded them off AMSAT web site. I edit out all the unnecessary information and update the files. It's tracking FO-29 just fine.

Bob W7CTW

Source record: 11952

The loop antennas mentioned are horizontal polarization
and probably have a big null over the top-- unsuitable
for satellite use. Verticals like a 1/4 wave also have
a pronounced null in the upward direction which is
more and more pronounced in higher "gain" verticals.

The advantages of the Lindenblad array and QHA (for satellite use) are
that they
1. have some gain in the upward direction
2. have relatively hemispherical patterns
3. have circular polarization

The only other omni designs I know that have
all three are the "eggbeater" and Turnstile-Reflector or TR.
Both the eggbeater and TR are horizontal polarization
off to the sides (horizon) where the Lindenblad and QHA
remain circular.

I believe as gain goes, the order from most to least is
QHA
Lindenblad
eggbeater
TR

Please correct me (someone) if I am off anywhere.

M2 sells eggbeaters for 2m and 70cm
http://www.m2inc.com/pdf/eb144.pdf
http://www.m2inc.com/pdf/eb-432.pdf

I use directional antennas (yagis for 2m and an
Axial Mode Helix from ARRL plans for 70cm).
But I have worked other stations who were using
eggbeaters for both 2m and 70cm at the time. It
would have been on FO-20 and FO-29. So it is
at least possible, but you would want preamps
for receive and/or more sensitive radios than I have!

Sounds suspiciously like the statement should be "If you have the
right equipment _with_a_suitable_image_rejection_problem_ it is
possible to monitor..."

My guess is that the transmission happens on some other frequency and
due to receiver problem, this is heard in the wrong place.

I might have even believed frequencies around 590 MHz, which in most
parts of the world is channel 36 and is at the border line between
Band IV and Band V. In some countries this segment has been previously
used for aeronautical purposes. By default, the video modulator of
VCRs in Europe are tuned to ch 36, since previously no transmitters
used this channel.

It is of course possible, that this is some spurious output from the
Zarya transmitter, either some unwanted mixing product or harmonics.
One interesting possibility is that the fifth harmonic of 126.8 MHz is
634 Mhz. The 126.8 Mhz is in the aeronautical band, but quite close to
the 136-138 MHz satellite downlink band, so this could be the harmonic
of some spurious mixing product. When the 634 Mhz signal is heard, it
is a good idea to check the 136-138 Mhz satellite band for a similar
signal.

Does your freq allocation chart include allocations used in the CIS? The FCC has no jurisdiction outside of the USA and VHF/UHF frequency assignments are notoriously peculiar to the government doing the assigning. Even if the Russians use that freq for TV would not stop them from using it for something else.

Appreciate the link John but I am looking for the dummy's guide so to speak of making your own, for one thing I will not purchase over the net or from a foreign country unless they are WELL established and many have used them (chicken).

I have a AR5000+3 and I am after a straight forward plan to make a lnb/antenna for inmarsat/meteosat that will work on an offset 1.2m dish so if you see anything like that about i would be grateful for that link

thanks

Yesterday I listened on 634 (and also briefly on 1634) during one pass,
and I heard nothing.
I also have a problem with "due to the extreme doppler you have to tune
+/- 200 KHz" that was in one of the postings. The doppler on 634 MHz
isn't anywhere near 200 KHz.
Or maybe it was meant that it is a much wider modulated signal and this
tuning is required to hunt for some sidebands?

A search on the web yielded only pretty pictures and hype, but no technical
details like downlink frequencies :-(

Source record: 12044

There probably are companies that make them, but perhaps
not specifically for amateur radio use (bands). However
the beauty of the Lindenblad array is how easy it is to
build one yourself.

An even
better omnidirectional satellite antenna is the Quadrifilar Helical
Antenna (QHA).
(http://www.pilotltd.u-net.com/qha.htm or do a web seach)
This design is more complicated and difficult to homebrew.
There are companies that will make one for you for
amateur frequencies, but because their sales volume is
so low, prices are quite high.

Probably the best answer
to your question is that most amatuers use directional antennas
with az and el rotators for satellite work, because
omni's just don't have enough gain and therefore there
is just not enough demand for the amateur antenna
companies to produce them.

I have worked stations
using just "eggbeater" type antennas with preamps
on the LEO birds so strictly speaking omnis can work,
but it is not the norm.

The fact is that experts on monitoring the Russian space program radio
frequencies discuss this sort of detail on the Friends and Partners in
Space list:

fpspace@solar.cini.utk.edu

The frequency I gave was monitored by an expert (not me!) and I can assure
you it is for real. It was not designed for routine amateur monitoring and
is in the tv band just as Sputnik-1 was in the amateur radio band. I
believe you need a high-gain yagi and pre-amp to receive it.

Hi Bob

I have been running InstanTrack for years with only one other problem until now. I don't see the solution are any hint at the cause in your reply to my post. It may be that no one has encountered this situation with InstanTrack before. The other problem is the font below the InstanTrack map screen on another computer. It became just strange symbols or parts of letters since reinstalling Windows 3.11 to solve a problem with the system.

Analysis of typical satellite orbits (especially "time spent at
certain elevation") quickly shows that gain in the upward direction
is the first thing you should trade-in for other advantages!
Most passes won't get above 50 degrees or so, and those that do will
do only for a short time compared to the duration of the pass...

>more and more pronounced in higher "gain" verticals.

You are right that high gain verticals are unsuitable. Not because
of the sharp null in the upward direction, but because of the narrow
radiation pattern towards the horizon. ("pancake" pattern)

So the amateur bands must have been cut down in size since 1957 :-(.

According to several sources two harmonically related frequencies just above 20 MHz and just above 40 MHz were used for the early Sputniks. According to "The illustrated encyclopedia of space technology", the frequency pairs for Sputnik 1 were 20.005/40.002 MHz and for Sputnik 3 20.005/40.008 MHz. This is quite far away from the 15 m amateur radio band.

By the way, the first US satellites (Explorer 1 and Vanguard 1) transmitted just above the US FM-broadcasting band in the aeronautical beacon band at 108.00 and 108.03 MHz. In those days there were no frequencies set aside for space communication, so such strange frequencies were used. Today, the situation is quite different with internationally agreed bands for space communication.

Hi,

I'm setting up a groundstation using linux and all the associated gear. I've had 2 radios reccomended to me:

The Yaesu FT-847 and the ICOM IC-821H.

What are people's experiences with these models?

Is it a case of 6 of 1 and half a dozen of the other?

Highly biased comments appreciated.

Cheers

Both great radios for satellite work. The FT-847 costs more and includes HF, which you may not need, so why pay for it!

Since the TH-D7 has a half duplex TNC, it cannot send and recieve
packets concurently. Due to this, the TH-D7 will only work in receive
mode on Pacsats.

Source record: 11965

Good point, and in fact this is how I get away with
no el rotor, with about 25 or 30 degrees fixed elevation...
This works great for LEO birds, but when AO-10 is high
overhead I am out of luck, then again, it would be pretty
difficult to hear AO-10 at apogee with omni antennas.
Of course when AO-10 is at high elevation for me, it is covering
just the Americas, and I would rather work Europe and
Asia. My fixed elevation works fine when its apogee
is over the Pacific or Atlantic...

Initially I tried to use my Nevada discone for LEO satellites
after reading that a J-pole would work for 2m satellite
communication. Now I realize that a discone is not much
more than a pointy dummy load ;-) but, I was disappointed
to find that just as the bird would get close enough to
hear/hear me (depending on bird) it would enter a big fat
null in the pattern. I would say it begins to be noticeable
at roughly 45 degrees elevation and is stone deaf above
60 degrees.

Hi folks,

I live in Paris I can not get radio retransmissions of the US missions. I am desperately looking for them, any of them. If any of you knows where I might find these files I would be very, very happy.

I have vey high speed connection so I can afford to download large files.
If there is an online radio I am interested as well !! (should it be based on the Real Audio or Shout Cast technologies).

THANX A LOT FOR ANY INFO HELPING !!

InstantTrack matches up elements based on object number. It is
possible that you have two entries in your database for FO-29, and
you're updating elements on one and then trying to track using the
other one. Go into the manual edit screen and look at each entry in
your database. See if you have any matches for the object number
specified for FO-29 in the element sets.

If that doesn't work, rename the file IT.ORB to something else (you
could just delete it, but renaming saves it as a backup). Restart
InstantTrack, and you'll find the satellite database empty. Then
reload the latest element set, and it should work.

David: I know what you are looking for (a live feed over the net of the ground to space voice communication). That's a good idea, but I haven't seen any sites where this is available. The technology is definitely there: With RealAudio you can now listen (live) to things like the New York City police department communications... or air traffic control at Dallas-Fort Worth airport. (check out www.broadcast.com). A similar live feed of the shuttle communications would be fun.

I have on my site some RealAudio and .wav clips of amateur contacts with the MIR and the Shuttle. Check it out at:

http://www.erols.com/wmeara

Good luck!

Hi there!

I don't know of any archived files on the Web,
but when there is a Shuttle Mission actually up
and flying you can send your RealPlayer to
http://quest.arc.nasa.gov/cgi-bin/rr.pl?live.rm
and see/hear it live via NASA TV. This may not
exactly fit the bill, but many good .wav editing
programs will allow one to record and save
whatever is coming in through the sound card,
even if you have to do it in parts.
http://Broadcast.com also has live feeds and
is easier to get into during a mission, but the
RealPlayer video screen is smaller. ;-)

Hope this is some kinda help...

Best Reguards,
Lisa

Thanks for all the great responses.

I tried a 432 MHZ M2 Egg Beater with a Low Noise less then .6 db 25 DB Gain
pre-amp.
I can just about hear the bird on close over head passes. Not enough to
make out what is even being said I just notice the frequency gets a little
more quiet.

The reason I asked about a small compact antenna with some sort of Gain.
Is. Because.
I'm trying to work Ao27 from the CAR OR TRUCK. I have no place to put a
beam or I should say rotate a beam.

Is anyone working AO27 from their car?
If so. Could you pass along your setup (Rig) info?

Thanks
Ron

Source record: 11986

Rob,
So if I understand what your saying is. A vertical is not really Omni
Directional at the Horizon?
(pancake" pattern)

But it's not totaly flat like a pancake right?? You do get some maybe 10 or
20 degrees of gain at the Horizon
right??

Now, Comes the tricky part or hard question for me at least.

How do you know which way to rotate the vertical, other then trial and error
to find this 10 or 20 degree window.
Say you have a Comet GP15 vertical with 3 ground reflector elements.
How would you know which way to turn this vertical to point the 10 orb 20
degree window at the satellite.

Thanks Ron

I do all the time. Most of the time I stop the car, and point a small 6 element yagi out the
drivers side window. I have a preamp between the yagi and a FT-712 70 cm mobile rig.
For the uplink I use a another 2 meter mobile into a 19 inch dual band mag mount antenna.
With 30 watts and the short veriticle I am not as strong as the 5 Watt HTs into an arrow.
I have had 1,000s of QSO on AO-27 using this setup.

I also work while moving down the road. If I have to drive then I hook the preamp to a
diplexer that is connected to the 2 meter rig and the dual band mag mount. I can hear the
satellite when it is 15 - 20 or more degrees overhead. If I let someone else drive I keep the short
yagi inside and just point it at window facing the satellite. When AO-27 gets high enough
I switch to the dual band antenna. I have had a few 100s of QSO while mobile on AO-27.

Good Luck, Randy N7SFI

2172. Re: InstanTrack and Kepelerian Elements for FO-29 Problem

From: kendurham@home.com
Message-ID: <377bd4f7.613566621@news>
Source record: 11988

Thanks Paul! Both problems are now solved. I had installed a new video card on the old computer so it needed Patch #4. The other computer had two instances of FO-29 (listed as satellites number 5 and 159.) I deleted number 5 since it was the one not working and now all is OK.
I don't know why I didn't look for the FAQ before posting. Just getting absent minded I guess. It was very kind of you to respond to my post.

2174. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-07-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7lh8du$pk4@news.Hawaii.Edu>
Source record: 11989
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

I assume you mean the computer interface! No, it is not the same. Icom uses their CI-V interface. I have some code (in Java) that controls an Icom-821, let me know if you want a copy.

>Keith

What I have been told is that you can expect around 17 dB of loss when transmitting lets say horizontal and receiving vertically. Since the orientation of the satellite, vertically or horizontally, in relation to the ground station is a ever changing thing, it is better to make accommodations to receive both. Moreover, satellite builders have attempted to build around the problem by transmitting and receiving in a circular polarization, so that a crossed set of yagis/dipoles phased in a circular fashion will operate best.

Input is welcome!

The pancake should be horizontal, so the antenna should be omnidirectional.

>But it's not totaly flat like a pancake right?? You do get some maybe 10 or
>20 degrees of gain at the Horizon
>right??

It depends on the gain of the antenna. The more gain, the flatter the
pattern.

>Now, Comes the tricky part or hard question for me at least.

Use a satellite tracking program to calculate the azimuth and elevation.
When you start rotating and tilting anyway, it is better to use a yagi
instead of a vertical.

Press Release: Logger Ver. 6.07 Now Available
=============================

Looking for a great Windows logging program ?

It's here! LOGGER is a program written by Bob Furzer,
K4CY (ex N6BFM, 9K2ZZ) and has more features than
the average ham will ever use, including:

Easy to use logging
Radio control
DX cluster access (Telnet or TNC)
One click grabbing of cluster spots
Easy Awards tracking (DXCC, WAS, WAZ, IOTA)
Graphical display of Grayline
Database for managing Skeds
Handy conversion calculator (F to C, etc)
GOLIST QSL database interface
Support for current ham CD ROMS
Graphical Satellite tracking display
PSK-31 interface for your sound card
Data Window to drive a TNC in RTTY or data mode
Easy backup and log printing
Completely ADIF compatible (import & export)
Keyer interface for TNC CW keying
Quick STATS display of DXCC and WAZ stats
Easy User maintenance of DXCC and Prefix data

Plus a bunch more....

LOGGER is designed so that the user can easily update
DXCC lists, PREFIX lists, and set up their own band plan
and modes. No waiting for someone to customize this
program for you, you can do it yourself. No worrying
about a new DXCC database being available if a new
country comes along, with a few clicks you add it to
your database. And no worrying about being 'stuck' with
one logging program - LOGGER supports full ADIF
imports AND exports, so you can easily transport your
log data to and from any other program that is ADIF
compliant.

The great news is that Logger is absolutely FREE !!

If you'd like to try Logger, you can download a copy
today. Visit the following website:
```

http://www.guam.net/pub/midxa/

and click the big red LOGGER on the main page,
which will take you to a page with information about
LOGGER, screen shots, and information on how to
download the program.

LOGGER is unique in the fact that not only is the author
supporting the program, but other users are supporting
it too. There is an email list for LOGGER users, and
you'll find a subscription box on the LOGGER web page.

Help is available should you wish to convert your current
logs to ADIF format and import them to LOGGER.

LOGGER is a program that will satify the needs of
casual operators or serious DX'ers. Plus the author is very
willing to work with users making changes, modifications,
and new features available.

And the price just has to make you smile.......

Enjoy.

True, but this is not a good place (or way) to start.

If you're really that allergic to kits have a look at some
of the published designs in journals like VHF Communications
and DUBUS.

is there a url for them?,

by the way i have just constructed my first inmarsat antenna for a dish and it works, signals very weak so a pre-amp will be needed i think...but if it can be done that easy then Meteosat should not be far away :-)

Does anyone have any information or references to the European Global Time system that will fly on the ISS Zvezda module this coming November? My only source is:

http://www.flatoday.com/space/today/070599b.htm

Thanks,

John

2195. Which satellite?

Newsgroup: rec.radio.amateur.space
Date: 1999-07-05 00:00:00 UTC
From: Tom Stiles <hamrad45@hotmail.com>
Message-ID: <T78g3.831$x44.461531@news1.atlantic.net>
Source record: 11911

First I am located on the west cost of Florida. Today (7/5/99) at 1445 hrs I was trying to find AO-10 which should have been at 270 degrees heading from here and about 45 degrees inclination. I was listening on 145.825 SSB and hear something very strong on FM. When I switch to FM I hear the tail end of several QSOs but did not hear what satellite it was. Can any give me an idea what is was? It was either at 270 or 90 degrees from the West coast of Florida at 1445 hrs on 145.825 or near there.

Thanks in advance,

Tom

To listen for AO-10, tune between 145.806 and 145.808 USB
and you should hear a carrier tone with slow QSB, that is
the "beacon" for AO-10. Move your antenna away and if
it disappears you have found it. People seem to "meet"
for SSB at about the center of the passband, 145.900.

This recently from the amsat-bb Ian, don't give up completely yet :)

::::::::::::::::
Hello SP-41 fans

AMSAT-France would like to thank you all who sent nice SP-41/RS-18
listening reports and patiently awaited an answer.
We received around 1200 mails, including touching postcards from 6 years
old SWLs as well as valuable/detailed/accurate telemetry records from
experts.
Many thanks for the countless quantity of encouragements, collection
stamps, green stamps, postcards, posters, stickers, pins, tourist maps
and even flags we received from all over the world.
We completed all the QSL cards last week-end during a dedicated BBQ
party. The cards will be mailed the first week of July with a
philatelic postmark on the enveloppe.
Visit our WEB site (http://www.ccr.jussieu.fr/physio/amsat-france/) to
be sure you are in our log book. Soon available on the same site is an
EXCEL file including all the temperature data we have collected.
Its not too late to apply for a QSL card: please just send a listening
report including date and time and a self addressed enveloppe with 2
International Response Coupons to the following address:

AMSAT-F
RS-18 QSL manager
14 bis, rue des Gourlis
92500 RUEIL MALMAISON
FRANCE.

AMSAT-F team is now working on a new educationnal satellite project.

Stay tuned !

Cheers

Jean-Louis F6AGR

thanks for forwarding that to myself and probably quite a few others who were also interested.

I appreciate the pressure especially due to more recent problems that the people are under but it is in the interest of projects like this to be well organised and to run to a good time frame, now before anybody says it, I know life is never that simple but severe delays and many people wondering what is going on without hardly any news from the organisation really is not a very good way to do it. The Amsat post you sent i have seen similar before with no result, but hopefully this time all will be OK.

7-8 months is a long time though, hell if I could help out I would I do have spare time and would gladly give up some of it .

The is hope yet!

My QSL card for RS18 / Spoutnik 41 arrived here this morning. Posted in
Paris on the 2nd so there is hope yet.

I sent to Russia for the previous one and didn't get a QSL for that.
I don't blame Serge (I think he was the QSL manager). I guess someone in
the Russian post office grabbed the Reply Coupons :(

So did mine, but they did not mention any date of the report on it -
there is not even a line saying "confirming your reception report of ..." -
(I wonder whether the printer did not realize this - he is a radio
amateur, too), and they forgot to put the M/ in front of my German
callsign although they somehow managed to list my report correctly
among those from the U.K. on their WWW page - it is probably not a
good idea to write QSL cards during a barbecue party ;-)

Have a look at the G4XYW modem at
www.tvipug.freeserve.co.uk
which is RUH compatible (9k6 only) and also interfaces directly
to a TNC disconnect header with no additional components and
to a PA0HZP Opto-SCC card with no extra parts (both connector types
are on-board). Lots of other features such as CWID compatible,
hardware PTT watchdog, selection of TX waveforms, clock
generation and many other points.

Also available is a simple interface to allow the modem to be driven
directly from a PC serial port. So far DOS drivers for BPQ, xNOS
packet driver, Ethrax25 packet driver are ready.

Win95/win98 users are looked after by the SV2AGW packet engine
which now has a suitable driver.

Linux users will have a driver very soon!!

None of these drivers are required when using an SCC or TNC of
course - only if using the simple voltage converter.

Hi Martin,
The ITU assigns the USE of frequency bands worldwide. It is possible that outside ITU Region 2, those frequencies could be used for something else, but that would be crazy for a space station operation, since it travels over the other ITU regions. Of course, the CIS could have gone "rogue nation" on us.

2215. No News Is Good News? AND SUNSAT

Newsgroup: rec.radio.amateur.space
Date: 1999-07-09 00:00:00 UTC
From: kendurham@home.com
Message-ID: <37853fa2.261408706@news>
Source record: 11931

Whatever happened to this usenet group? Updating the posts yields nothing new. Its been getting less and less use for the last few months. Since warm weather, there is a real dearth of activity. Same for AO-10. Hardly ever hear anyone. The beacon is strong and I can hear myself Q5, but that's about all.

Does anyone know if SUNSAT will be turned on over the US anytime soon? Maybe South Africa is mad at our government over the boycot. Or maybe they're afraid we'll run the batteries down.....or what? They're as secretive as AMSAT is about PH3D.

Ken K5MBV

2216. Re: No News Is Good News? AND SUNSAT

Newsgroup: rec.radio.amateur.space

Source record: 11932

Hi Ken,

I have been receiving much more current information via the
AMSAT-BB@amsat.org listserv.

Like SUNSAT's batteries do not get a lot of recharging in its current cycle
(18-6), but things are to improve. SUNSAT was turned on over the America's
this past weekend. It's repeater is much stronger than AO-27.

And there is no spill over crosspostings from
rec.radio.misc.vile.code.debate.

Regards

Christopher Cox

2217. HELP: Ramsey FX-146 & KPC-3!

Newsgroup: rec.radio.amateur.space
Date: 1999-07-09 00:00:00 UTC
From: n5zgt@swcp.com
Message-ID: <7m3kc5$oo0$1@sloth.swcp.com>
Source record: 11933
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.space

Hello Everybody,

I have a Ramsey FX-146 2 meter transceiver I want to use on packet with my KPC-3 for APRS, Mir and SAREX. I receive packets just fine, but my problem involves the transmit side of things.

I have my TNC connected to the 5 pin DIN on the back according to the two manuals, and am having a problem. Whenever I have it hooked up to my TNC, the Ramsey rig stays keyed, whether the TNC in powered on or off.

The same thing happens when I have the TNC connected to the MIC and SPKR jacks on the front of the radio.

My questions...

What is causing the Ramsey to stay keyed?

Can anybody tell me how they have their Ramsey and KPC-3 wired?

Can anybody offer any other tips on how I can get these two to operate correctly?

Thanks! Please email me.

73,
Brian, N5ZGT

Radio Meteor Observation Bulletin No. 71 July 1999

1. FORWARD SCATTER METEOR OBSERVATIONS

Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
BTransmitter Location: still working to identify, possibly South German C2,
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
BObserving method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

Notes:
. this month the system has been adjusted to record only the strongest overdense reflections with duration of > 3 s.

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.25 MHz

Receiver: Icom R-10
Antenna : resonant dipole
Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Filter : high-Q (Q at least 300) bandpass filter between antenna & receiver.
Listening Mode: AM
Recording method: listening by ear

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference.

. + = 1/2 hour observation only.

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

. local time = UT + 2 hours

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
smallband resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. good Arietids and zeta Perseids during the first half of the month.

Lots of interference towards the end of the month.

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both
transmitters is processed into same 40 Hz virtual
receiver channel.
BObserving method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, another channel is used for automatic
interference rejection. Sampling interval: one 4096
point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also
available at http://www.qsl.net/oe8fnk this includes now also Es, FAI
and fireball statistics.

The meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value, to
show the reduced accuracy. Results for less than 20 min. observing time are
excluded.

Counts of reflections longer than 6.5 seconds, assumed
to be overdense.

Propagation overview for June 1999

E : sporadic-E or E-layer propagation
F : FAI (field aligned irregularity)
- : propagation only via meteor echos.
(blank) : no data available

| Jun 1999

Notes:
. no activity and no outburst seen from the June Bootids, quite
different from 1998.
. lots of sporadic E propagation.

Werfried Kuneth

Observer: R.B. Minton
Location: Raton, NM (104 26' W, 36 54' N, 2000 m above sea level)
Frequency: 92.9 MHz
Transmitters: KTZA FM 100 kW, Artesia NM, dist 444 km, geogr azim 178 deg
KSPZ FM 53 kW, Color. Springs, dist 217 km, geogr azim 352 deg
KYBR FM ? kW, Espanola NM, dist 180 km, geogr azim 236 deg
???? FM ? kW, Juarez Mexico, dist 579 km, geogr azim 198 deg
Antenna: folded dipole, on 6.3 m high mast, oriented N-S
Receiver: Subaru 12 V DC car radio with digital tuning
Observing method: conditioned audio input in the game port of an IBM 386 SX-50
PC, 128 samples/second, DOS/Basic software, automatic

Note:
B . lightning noise on May 19, and possibly on May 25 and 29.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

```

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
JST = UT + 9 hours
. the June Bootid shower did not occur.

Sadao Okamoto

Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km.
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were recorded on a pen-recorder chart.

Chikara Shimoda

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz Width.
Antenna: Multi band Dipole antenna for HF and 50 MHz.
(Installed to confront North and South direction).
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours)
Distance: About 1,125 km from Lon Tan.
Receiver: Icon PCR-1000 all band receiver by computer controlled
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the "S" signal is received using a band pass filter (50 MHz)
and fed in to the D/A converter and computer in real time. Data
sampling system: using a 8 bits A/D card to PC/AT and "Data
Capture" software with 1/8 second sampling interval to store all
the > 1.0 s reflections.

Garfield Tsao

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 88.8 MHz ?
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz)?
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2-el. Yagi, G=4 dBd to SW, azimuth 45 deg (SW), polarisation H.
Data sampling system: threshold triggering, sampling rate 32 ms.
Computer logs total hourly elapsed reflection time, number of
triggers for the hour, the longest time the signal was
continuously above detection level for the hour.
Data on major showers available in the Compact MS-Soft format.
Software for viewing available from
www.saunalahti.fi/~oh5iy/radio50.zip (754 K).

Note:
from June onwards scaled with a non linear scaling algorithm, due to an apparent difference in receiving system performance since the last modification (to two frequency system) in February.

Ilkka Yrjola

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor Bobservations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, Bplease send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Check whether the rig requires positive or negative keying, and which type
the TNC is set to. There is usually a way to switch the TNC between
positive and negative keying, see your manual.

Hi Martin,
The ITU assigns the USE of frequency bands worldwide. It is possible
that outside ITU Region 2, those frequencies could be used for something
else, but that would be crazy for a space station operation, since it
travels over the other ITU regions. Of course, the CIS could have gone
"rogue nation" on us.

Although I think people who post unwanted ads of *any* sort to Usenet are scum,
I should point out that:

1) Given that such things go on quite a bit now, automatic gating of Usenet to a
mailing list is stupid;

2) Given that people like receiving garbage in their mailbox even less than on
Usenet, permitting *any* attachment to pass through such a gate is *really*
stupid.

2224. Meteosat worries for UK and EU users

Newsgroup: rec.radio.amateur.space
Date: 1999-07-10 00:00:00 UTC
From: EAVSDROPPER <eavsdropper@ukonline.co.uk>
Message-ID: <7m8hou$c8o$1@apple.news.easynet.net>
Source record: 11799

I got this mail from them about Meteosat in the future... why do the UK/EU orgs seem to insist on us here always paying through the nose for anything educational even if it is funded with our money ?...Noaa told me in a mail a while back that they will continue their policy of free access to polar/wefax signals for us lot...what is to be for us in the future in the UK/EU if they want us to pay ?

Dear Ian,
the current type of service with the first generation of Meteosat satellites will continue at least until the end of 2003. The new generation (Meteosat Second Generation - MSG) will no longer support the analogue transmision techniques (WEFAX). From then onwards all disseminations will be digital and also encryption will be applied to most of the data on the dissemination mission. The question about the fees for the amateur community is still under discussion by our delegate bodies and a final decision has not been made yet. Please check our Web pages occasionally to follow the progress on this decision making process.

Mmmm,

If there's such a panic and they's 'hiding the truth' of a bad situation, why was Jean-Pierre spending 6+ hours trying to fix the packet system when all this was going on? If it was so bad - I'd a thought he'd be like, you know, trying to stay alive instead of fixing a troublesome packet station.

The sky ain't falling

Me thinks of more concern would be the launch freeze. No supply = no stay. Last word was '17 July' they'd have to leave if they didn't get resupply. Now THATS a real problem.

You are right, they are called Motorola connectors. They can be purchased at Radio Shack, Mouser, Newark, and Digi Key. As for the smaller connector I don't know what that's called or where it can be purchased. But you might try Pasternack. They specialize in coaxial connectors of all kinds. You might try a search for them on the Web. 73 Jim KC7ASV

>73

>Malcolm, G8NRP

What do you mean?
When your employer disciplines you for receiving pornography at work via a
hamradio mailinglist, does he do this because:

- the mail facility is not meant to be used to receive material of personal
nature, and you were not supposed to be on that mailinglist using your
work account anyway. The pornography bit only comes into play because
it somehow triggered a mailscanner and your employer found out you are
receiving that list.
-> I think it is every employers right to limit the use of facilities
that are provided for business use. Just live by the rules or find
another job.

- the employer is clueless and does not understand that the pornography is
not something you elected to receive by subscribing to a hamradio list,
but is just something an outside abuser (not you) sent to that list.
-> I think you should, for your own protection, not use the business
mail facilities for your personal purposes when you are working for
such a clueless employer, because you cannot control what you receive
and thus permanently endanger your job.

Trying to avoid the problem by asking "Please do not do this sort of thing
again" is certainly not going to work. Nobody likes these things, but
the spammers will just continue. Merely by posting this Usenet message
you will attract more junk to your mailbox at aeat.co.UK, assuming the
address is valid. When that is a problem for your employer, stay away
from Usenet and/or get a personal account and use it at home.

Source record: 11945

I really doubt anyone is panicing. Jean-Pierre had time to bring the ham rigs with him. I'm sure if there was some kind of risk or imminent danger he'd have left that 'non-essential' stuff in Priroda. Heck, while listing to him chat with folks over NA early this morning, he was even suggesting putting all the gear back in the Priroda module.

Nope - after hearing Jean-Pierre, I'm going with the idea that nothing is 'being played down again'.

Source record: 11946

The official STS-93 SAREX web page at
http://garc.gsfc.nasa.gov/~kc6rol/sts93.html is ready for use. Please
send any comments for improvements or errors detected to me.

The crew mentioned SAREX several times during their pre-flight briefing
with the media. It sounds like they will want to do lots of voice
contacts on this mission.

The packet rig is flying and we are encouraging people to try APRS as
well as connecting to the packet robot. Please read the operating
instructions on the web page before trying to work SAREX on STS-93.

Another new thing about this mission. We are publishing the times and
downlink frequencies for the school contacts so that you can listen in
to the astronaut side of the contact.

Have fun working SAREX on STS-93!

The real panic comes from the explosion of their support vehicle on the pad. Kazakhstan is not allowing any more launches for a while and Mir may have to abandon as early as muddily due to expended supplies! That would be a real shame.

Date: 1999-07-11 00:00:00 UTC
From: Garth Milne <garth@control.co.za>
Message-ID: <3787c68d.0@news1.mweb.co.za>
Source record: 11802

Hi from Garth Milne, Leader of the Sunsat programme.
See http://sunsat.ee.sun.ac.za
Sunsat was used last sunday in the USA, and will be on this Sunday.
The web site has a detailed summary of the status of Sunsat.

We don't try to be secretive. We are just very busy trying to run a satellite, teach (I do give classes!), research, and find funds for future work.

Many of our team are having their first break in many months. It is our university mid-year break at present.

Hope you can listen to Sunsat this week end.

We plan on having Sunsat on for the USA on Sundays, but will be asking forks in NA Amsat to suggest the preferred passes.

I havn't checked the time exactly but you probably heard Sunsat's first USA QSO's. Its on 145 825. See http://sunsat.ee.sun.ac.za. Check the orbital elements to verify it.

Thats not a bad thing either, Mir has surpassed all expectations and has
been an exemplary spacecraft I am sure many will be sad to see her
de-orbit..time to let her go and put all efforts into the ISS instead of
spending money on patching up what is obviously too old. The ISS has
suffered enough delays already due to money shortages etc.on the Russian
side..Coming down and letting MIR die with dignity must be the right thing
to do ?.

2243. STS-93 SAREX Concerns

Newsgroup: rec.radio.amateur.space
Date: 1999-07-11 00:00:00 UTC
From: Bob Bruninga <bruninga@nadn.navy.mil>
Message-ID: <Pine.GSO.4.05L.9907110928290.12159-100000@arctic>
Source record: 11809

SAREX Team,

Great! Having the downlink of school contacts public is the single
most important benefit to the SAREX program.

But we must begin the PR campain immediately and seriously
to make sure every single HAM on the planet understands that these
events are a NON-RANDOM-QSO mode so that we dont kill the golden goose.

Although this should come across in the strongest terms, it should
also not appear to be condescending nor high-handed. It should come
across as in-all-of-our-best-interest, and must be included in
every public mention of SAREX.

So far, I have not seen this implied in any postings....
I hope someone can come up with some good wording SOON.

But since 10% never get the "word", maybe the most important thing would
be for the Astronauts to use the phrase "SCHOOL CONTACT" in every
transmission. It is the only way to assure that at every minute, everyone
gets the message!

EXAMPLE: N0CLU this is Columbia, SCHOOL CONTACT, OVER.
yack, yack, yack... SCHOOL CONTACT, OVER
Roger, yack yack... SCHOOL CONTACT, OVER
etc...

Being able to hear the downlink will improve my ability to show off SAREX
to my students by an order of magnitude! In the past, the hit-or-miss
nature of the SAREX downlink, was actually a NEGATIVE PR value. I quit
trying to do live demos at the Naval Academy years ago because the
dissappointment of a non-event to students was worse than no event.

I hope we can make this a big success!

de Bob, WB4APR

2246. EU school contacts (was Re: STS-93 SAREX Concerns)

Newsgroup: rec.radio.amateur.space
Date: 1999-07-11 00:00:00 UTC
From: Will Marchant <kc6rol@amsat.org>
Message-ID: <3788DABB.CEEE01E6@amsat.org>
Source record: 11812

Hi Ian:
The SAREX program has done a number of school contacts with UK and other EU nation schools. We've done contacts with schools all over the world. On low inclination orbit missions like STS-93 we run most, if not all, of the school contacts through our network of volunteer ground stations. We don't have a station in Europe so you won't be able to listen in directly.

We do have a few phone lines available that allow you to listen in on both sides of the school contacts. If someone wants to arrange for a school group to listen in or to put the contact out on a local repeater system they should send me a proposal. I'll try and prioritize and pick the plans that will benefit the widest audience.

On a slightly different note, I'd love to have someone tie the phone line for monitoring school contacts up to a RealAudio server (or similar technology) so that Internet users could listen in to the contact. Any volunteers?

Thanks for that nice response, The reason I had mentioned the UK/EU Sarex thing was that with the upcoming hopes for Sarex missions/perm Ham station etc on the ISS and the fact that the UK/EU have some involvement in the ISS it would be nice to see frequent-ish direct contacts for schools in the UK/EU , I am just about to start for my license in preperation for this future ISS/Sarex possibilities as my childeren will be of the right age to start understanding a little about it by the time the ISS is fully operational been doing radio of all kinds for 21 years..about time I started talking instead of just listening :-)).

As for help now I only wish I could as I have the time spare and the enthusiasm, but sadly I have no way of setting up a live real-audio system :-(.

The only things I can offer toward this kind of thing at present is my monitoring equip/phone line/web space/time etc. (I am currently updating to better monitoring equip), and enthusiasm, if this is ever of any use for anything involving the UK then my time is yours !

thanks

ian k.

Thats not a bad thing either, Mir has surpassed all expectations and has
been an exemplary spacecraft I am sure many will be sad to see her
de-orbit..time to let her go and put all efforts into the ISS instead of
spending money on patching up what is obviously too old. The ISS has
suffered enough delays already due to money shortages etc.on the Russian
side..Coming down and letting MIR die with dignity must be the right thing
to do ?.

From: Bob Bruninga <bruninga@nadn.navy.mil>
Subject: STS-93 SAREX Concerns

SAREX Team,

Great! Having the downlink of school contacts public is the single
most important benefit to the SAREX program.

But we must begin the PR campain immediately and seriously
to make sure every single HAM on the planet understands that these
events are a NON-RANDOM-QSO mode so that we dont kill the golden goose.

Although this should come across in the strongest terms, it should
also not appear to be condescending nor high-handed. It should come
across as in-all-of-our-best-interest, and must be included in
every public mention of SAREX.

So far, I have not seen this implied in any postings....
I hope someone can come up with some good wording SOON.

But since 10% never get the "word", maybe the most important thing would
be for the Astronauts to use the phrase "SCHOOL CONTACT" in every
transmission. It is the only way to assure that at every minute, everyone
gets the message!

EXAMPLE: N0CLU this is Columbia, SCHOOL CONTACT, OVER.
yack, yack, yack... SCHOOL CONTACT, OVER
Roger, yack yack... SCHOOL CONTACT, OVER
etc...

Being able to hear the downlink will improve my ability to show off SAREX
to my students by an order of magnitude! In the past, the hit-or-miss
nature of the SAREX downlink, was actually a NEGATIVE PR value. I quit
trying to do live demos at the Naval Academy years ago because the
dissappointment of a non-event to students was worse than no event.

I hope we can make this a big success!

I will be really looking forward to the ISS and Amateur radio especially
when it allows more participation on a "local to me" level with
schools/public etc. This will then be the time when I should really be able
to give my time and help out instead of just hearing about it from afar :-).
I must admit I have only been into the space/ham scene for a few years now
but it has me very captivated and the educational possibilities aswell as
the pure "fun" of it all really makes me look forward to sharing the
experience with my children.

MIR used to move a bunch. Not sure if it is still doing that or
not. Make sure the keps are the same for both programs especially
if the other sats are where they are suspose to be.

2256. Sat tracking software confusion!

Newsgroup: rec.radio.amateur.space
Date: 1999-07-13 00:00:00 UTC
From: felixtcpip@aol.com
Message-ID: <19990712221828.17658.00000377@ng-cg1.aol.com>
Source record: 11822

Hi,
Now i am completly confused..Nasa's Jpass is totally off from my LogSat with the newest keps. But Nasa's "mir location" has the wrong time set in the program. For some reason its off by 3 hours, and the jpass is also messed up! Who do i trust?? Where can i get reliable sat tracking that is easy to use, and reliable?

Please if you know any websites or easy to use free programs..please instruct. I tried winorbit...but it always gives error, STSplus is extremely complicated, orbmaster is even more complicated. Where can i get a program that i enter the sat i wanna track, and it tells me where exactly it is??

Thanks for the help,
Felix

Hi Garth. Thanks for the response. Glad to see you're reading
this usenet newsgroup. Your website doesn't give the answer
to the question that I posted, so thanks for the reply here. I
apologize for the "secretive" comment. You must be very
busy with all the responsibilities you have. Hope the mid-year
break gives you some time to relax and have some fun.

Three more questions: Why limit USA useage to one day a week?
Is SUNSAT a daylight only satellite like AO-27? How many days
per week will SUNSAT be operational over South Africa?

You said it "seemed" to have updated. Looking at the two line elements
(TLE)
the third number (epoch) from the left on the top line should read
something like:
99148.54547635 this dates the element set. The 99148. is older than a file
with
say 99160. Check your program's element to see if it actually updated.
Also check your PCs clock, and time zone. BOBBY K4BGA

I haven't opened my 847 yet, but your description fits several connectors.
Among these are MCX from AMP (now owns Omni-spectra) often used
by Motorola, and FSC by I think Muratta. I'd try AMP first.
Good Luck, BOBBY K4BGA

I believe that the sentence containing "fees for the amateur community is
still under discussion" is somewhat misleading. As far as I am aware, a
specific decision to charge for the data has been made and is quoted on
EUMETSAT's web site. This has been the subject of much discussion on the
weather satellite forum and the EUMETSAT response was somewhat minimal; the
only question concerns the conditions under which the decryption boxes
will be issued - not whether or not there will be a charge. Whoever wrote
the above paragraph has therefore omitted significant factual points.

It is understood from EUMETSAT that only low resolution data (currently the
equivalent of wefax) will be unencrypted. Even the Chinese allow free
access to their high-res imagery!

No problem at all......A natural course of events (an aged station kept
up past its designed life) that will force Russia to turn it's attention
to the ISS, which it has so far refused to do because of a national ego
over MIR. ISS is two years behind thanks to MIR, and the Russians
unable to fund their portion because of the $250M annual budget needed
to keep MIR alive.

The "Armageddon" scenario for an end to MIR would be interesting, but I
suspect it will go out with a whimper, after 6+ months of being
unmanned, and probably out of control, reentering somewhere over asia.

Quite right Lawrence it just has that all too familiar "little guys getting screwed again" ring to it which I find so typical in UK/EU when it comes to things that are useful or have educational value, if you have not got the money you don't count !

It seems this is the way a LOT of things are going these days thanks to the corporate or a corporate way of doing things

the future looks very bleak for the likes of us all if things do go that way !

perhaps we should have our own "HAM" meteo geosat :-) with colour pictures too...now that I WOULD shell out towards with pleasure because then it belongs to everybody and not just the privelaged.

I have just completed a new introduction to APRS, explaining what it is, how it works, and raising certain issues which apply specifically to the UK.

25 pages, fully illustrated with many diagrams and screenshots.

Download it from www.netro.co.uk/whitepaper.htm

It is in PDF format, so you will need the Adobe Acrobat Reader (free from www.adobe.com) to read and print it.

Let me know what you think!

73

There are two types of Motorola connectors. The common type used on almost
every non late model GM and a much smaller one that is (as far as I have
seen) only used on the late (post 1985?) GM factory radios. MCM (not meant
as a plug) has adaptors that will go each way. Regular Motorola to GM Mini-
motorola and the opposite.
But I suspect that the micoro connector that you are referring to is not the
min-GG/motorola. It sounds like the type connector that Kenwood(an many
other Asian) use for internal RF connections. My R2000 manual does not give
them a name. You may have to contact Icom and order a jumper cable to
sacrifice one end so you can mate that to a more standard connector. When I
wanted to access the IF in my R2000 I just soldered a small coupling cap and
brought that out to a BNC. If the FT-847 is typical on more modern units,
this might not even be an option. If it is anything like my PCR1000, there
is no room on the cramped, multi-layer circuit board for "add ons" of any
sort.
Good luck

2272. Kansas City Tracker/Tuner and Yaesu FT736R CAT Connection

Newsgroup: rec.radio.amateur.space
Date: 1999-07-14 00:00:00 UTC
From: kendurham@home.com
Message-ID: <378cca1a.279794@news>
Source record: 11838

I just bought a KCT with tuner option from an individual. The 6 pin DIN connector that should attach the tuner output cable to the FT736R CAT port was missing. I started to replace it, but found that the pinout descriptions for the CAT connector from the KCT manual and the FT736R manual don't agree:

KCT Manual FT736R Manual

pin 1 (Ground) pin 1 GND
pin2 (RX Data) pin 2 S. IN
pin3 (TX Data) pin 3 BUSY
pin 4 (BUSY) pin 4 S. OUT
pin5 (Not Used) pin 5 NC
pin 6 (Not Used) pin 6 13.8V

Has anyone found this problem before and which is the right pinout? The KCT support line suggested I contact Yaesu, but they would probably tell me their manual is correct . Neither manual has a schematic that I could use to determine the correct connections.

The KCT manual is right. Yaesu's manual is wrong. I scratched
my head over it a bit myself.

would anyone out there by chance happen to have a prairie digital board
for sale
that is set up for the u110 rotors? also if you have the rotors as well i
might be interested
in them as well.
if so can you e-mail me back and let me know? thanks alan.

This program sucks !!!!!!!

I'm a rgistered user of NfW and the version 2.0q sucks !!!!!
It displays MIR at a wrong position !!!!
so it tracks with an error !!!!
Believe me there is nothing wrong wiyh my parameters!!!!!

1. Time is syncro (radio controled DCF-clock - 1 seccond wrong in 300
years).
2. The latest kepler data being used.
3. Tried Plan-13 and SGP4/SDP4 algorithm.
4. compare some other satellite tracking software.

Compare your tracking program with online orbitview !

2282. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-07-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7moqns$a4q@news.Hawaii.Edu>
Source record: 11848
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

2284. Kansas City Tracker/Tuner Problem

Newsgroup: rec.radio.amateur.space
Date: 1999-07-18 00:00:00 UTC
From: kendurham@home.com
Message-ID: <3791fd51.53328800@news>
Source record: 11850

I haven't been able to understand the sat.lst or the Time/Target
Table well enought to get the system running with more than
one satellite. The KCT manual doesn't help much. The problem:

The tuner pop-up has a few satellites that will show when
tracking these particular ones with InstanTrack, but I don't
know how to add any and only one of these will actually
tune the FT736R. (AO-10) The others have correct information,
but all just set the radio to 146.899 and leave it there.

the sat.lst file in the KCT directory has the following
information only:

Time/Target Table Save-File Generated by
DEPH.COM

object(s):
01Jan87 00:00:00 20.0 101.0 000.000000

I can't seem to find out how to add to the table or to make
the tuning operation function except with one satellite. The
rotor tracking works fine except it usually stops the clock and gets
the pass out of sync with real time.
If I try the command leph from DOS, the following message
results:
Records loaded= 0

01Jan87 00:00:00 20.0 101.0 000.000000
Invalid parameter on above line

Can someone help me to understand what I'm doing wrong?

Thanks, Ken K5MBV

-- George Kammerzell N0ZED <n0zed@rmaprs.org>

See:

http://ftp.barc.org:8080/pub/hamradio/arrl/infoserv/techmisc/diplexer.txt

(from USENET via Mirror of ARRL FTP archive). You will need to use good
quality capacitors for the 440 side (surface mount or trimmers ("Johnson"
type) intended for UHF and above) and probably want to build it on some-
thing that will act as a ground plane. You may want to find the relevant
QST article (Oct 1991) before building it.

New N.Y.P.D. Radio Plan & Frequencies
By David M Torres, New York City

the following is updated radio frequencie information for the
new york city police dept. they are in the process of re organizeing thier
complet radio network which is now in phase 2 of a 4 part phase they
expect it to be completted within 2 years
phase 1 was the re organization of all city wide and special units
phase 2 is the re organization of all division radios
phase 3 will be the frequency expansion and narrowing the band
phase 4 will be the purches of new radios and fadeing out the
motorola saber's
as for the new york city fire department E.M.S. units they are also
re organizeing thier radio system from 800 trunk back to a conventional system
they will be useing motorola ASTRO saber's with both EMS & Police frequencies
i would also like to point out the phase 2 is not fully completed yet its
a very slow process and it dose take time but it is on its way so the changes
can take place at a blink of your eye

as always happy listening and keep your ears on.....

Phase 2 NYPD Manhattan Radio Plan

2288. NOAA with NFM radio

Newsgroup: rec.radio.amateur.space
Date: 1999-07-19 00:00:00 UTC
From: felixtcpip@aol.com
Message-ID: <19990718233749.17888.00003277@ng-fi1.aol.com>
Source record: 11854

Hello,
I am really interested in getting images from NOAA, but i have an NFM radio.
Does anyone know what i can do? Are there any filters that will make a radio
WFM? I don't want to purchase a new radio for this.

Any help will be greatly appreciated.

Thanks
Felix

2289. Re: Identify this connector, please.

The connector in question could also be from Hirose, a Japanese-based
manufacturer who sells in the US, too.

Check out http://www.hirose.com/

2291. Amateur radio hardware for ISS ships to KSC.

Newsgroup: rec.radio.amateur.space
Date: 1999-07-19 00:00:00 UTC
From: Will Marchant <kc6rol@amsat.org>
Message-ID: <3793415F.F11A4C8A@amsat.org>
Source record: 11857

Amateur radio on ISS one step closer.

The first set of flight hardware for the Amateur Radio on the International Space Station (ARISS) project (http://garc.gsfc.nasa.gov/~ariss/ariss.html) has passed all its tests and is on its way to Kennedy Space Center. Pictures taken during testing are at http://garc4.gsfc.nasa.gov/~ka3zyx/ariss/ariss.html for your reference.

After a tremendous amount of work by Frank Bauer, KA3HDO, (http://garc4.gsfc.nasa.gov/~ka3zyx/ariss/ariss13.jpg) and his team of volunteers at Goddard Space Flight Center, the radios, TNC, power supplies, and harnesses for the initial transportable ARISS station are ready. The hardware was shipped to KSC on the 9th where it will be loaded into the STS-101 SpaceHab module. Launch of mission STS-101 to the ISS is contingent upon successful launch of the Russian Service Module. A picture of the hardware is at http://garc4.gsfc.nasa.gov/~ka3zyx/ariss/ariss8.jpg

Initial amateur radio operations on ISS will consist of voice and AFSK packet on both 2m and 70cm. Future upgrades will include more bands and modes.

The ARISS external antennas will be mounted on the outside of the ISS Service module during a spacewalk scheduled for STS-101. The external antennas are the responsibility of the Italian ARISS team. A picture of the prototype antenna is shown in http://garc4.gsfc.nasa.gov/~ka3zyx/ariss/ariss13.jpg on the top of the shelf to Frank's left. The pyramid shaped structure is the L/ S-band antenna mounted on its EVA hardware. Four external antennas will be flown to allow support of amateur communications on the HF, VHF, UHF, L band (including GPS receive)and S bands.

Felix i use a plain out of the box Uniden Bc860xlt to receive NOAA pix here and it works fine...no mods what so ever..sure some of the white area may be tad fuzzy at times but 99% of the pictures look fine..I use WXSAT software also. There is also information posted on various sites about modifications to certain radios to widen em out some. One little tip on receiving these satellites...the antenna is VERY important.

Not the best, but check out Fodtrack at www.amsat.com in the
softwear section. The tracking interface and program is very
inexpensive. The softwear is not very impressive, but for free. It
gets the job done very well for me. I sometims run another program
at the same time to follow where the bird is at and how long I have
before los.

While the update frequency isn't great, the only obsolete information
I've noted is that TO-31 is only available for downloads...

2304. Fresh Keps?

Date: 1999-07-20 00:00:00 UTC
From: kendurham@home.com
Message-ID: <3794ff7a.76441398@news>
Source record: 11870

Does anyone know where to get fresh keps for AO-10? The ones from Celestrak are 36 days old and yield a -567 doppler with InstanTrack when the actual is about -3800 Hz. I believe most keps sources come from this source, so where should I go to find out where to get fresh ones? Could the old ones be modified to get the correct position and doppler data?
Ken K5MBV

----- snip -----

On a slightly different note, I'd love to have someone tie the phone line for monitoring school contacts up to a RealAudio server (or similar technology) so that Internet users could listen in to the contact. Any volunteers?

----- end snip -----

Ya, right! Put it on the internet. Cut out ham radio altogether.
Great thinking!

You want a good, easy program? Try Instant Track. It's an old
DOS program. It works fast, is easy to use, and it accepts either
of the Keplerian updates in plain old text format. You can get it
at the following URL:

http://www.amsat.org/amsat/catalog/software.html#it

You got more than I did! I've been trying MIR for several days
now here in Phoenix. One pass was about 45 degrees elevation.
Didn't get a thing. I thought perhaps it wasn't working at all.

Can anybody fill us in?

Thanks very much for your info. I presume you are on voice. I
was trying to get them on packet - 145.550. I'll listen on 145.985.
They are due here an a half-hour or so.

Do you know if they are on packet?

Mir uses the same freq for packet, packet runs most of the time.
145.985 FM.

Make your contacts now, it won't be around for much longer sadly.....

Yes, you're right, it *is* great thinking. People the world over who
care about ham radio and its image are scratching their heads these days
for ways of demonstrating it in a new and exciting way, to attract
newcomers. This seems to me to be a very good example.

Kids of 10 know how to use the Internet, so why not use it to show them
some of the interesting things you can only do with ham radio?

The luddites who persist in saying that there is no room for the
Internet, or who sneer at the "landline lids", are the very people who
will bring about the demise of ham radio.

Wake up! The Internet is here. Ham radio is here. The telephone is here.
There's room for all of them, and they can/do work together.

The last I read, the plans were to "depopulate" in August. The
Russians claim they can keep it in orbit from the ground for
"some time" beyond. Of course as we know if there are any
computer or gyrodyne failures (as there have been in the past)
with no on board crew, the thing will likely become impossible
to control from the ground.

There are some visible passes in the evening coming up, at least
for the western USA... I suggest that we get a good look, it
may be the last chance.

For visible pass skeds check out

One trick that might work is to find out the IF of your scanner.
If it is 10.7MHz then you can scanvange an old FM BCB radio, kill the front end, either add a 10.7MHz tuned amp and wrap a couple of turns of wire around your scanner, or bring out the 10.7IF with a 100pF cap to the first IF of the FM BCB set. The bandwidth will be too wide, but I just checked this out, and with a good antenna, on a good 45 degree pass (or 90 degree if you have a QDH/eggbeateror crossed dipoles), but 45 degrees on the old RadioShack diskcone will give you about 7 minuters of good clean signal.
I use WXSat by Christian Bock, and used an old radioshack handheld scanner. My IC-28A does a better job, but the if is 16 mhz so I had to use a mixer to convert the 16 to 10.7...not a big problem, but more of a hasle then most are willing to endure. If you check around your local TV/Radio/Actors group, you might be able to find an old wireless microphone reciever that is either easily re-crytaled to 136.XX or to use as an outboard 10.7 IF. I used a old senheiser wireless mic rcvr and it had a 50KHz wide if. Darn near perfect.
If you find an older FM BCB that is pre-ceramic filter, you might be able to retune the IF for a narrower BW.
Good Luck
IT will be worth all the hasle the first time you see a hurrican live on your equipment!

Thanks for the response, but please look at the epoch time for AO-10.
These are *old* keps. I finally found some new ones (only 4 days old)
in the NORAD web pages.

OK then, run them through a program like FodTrack that tells you
how old they are. It said 36 days (and the doppler was way off.)
Anyway NORAD had fresh data.

You can work RS-12/13 or any other of the Mode A birds with a Technician
class license or better. You are transmitting within the 2 meter band,
and the satellite is transmitting on 10 meters. It is the transmitter
which needs the appropriate license. Likewise on a terrestrial 2 meter
repeater linked to a 10 meter repeater. One way of thinking about it is
that a 'no-code tech.' transmitting on 2 meters is third party traffic
on the 10 meter repeater.

The epoch of the keps (especially those for AO-10) does not tell you much
about their accuracy... some sources just propagate the older parameters
to a new epoch.

I'm no expert but I would think so. however I don't think it would look like the shuttle. I would be looking for a glowing dot that moves across the night sky. The same way a satelite is visible.

Check out this wed site.
http://liftoff.msfc.nasa.gov/realtime/jtrack/spacecraft.html it's a trackig program that NASA set up online.

Can't seem to get up to date keps and don't hear a peep from STS-093
on 145.800.

Do you have any current information? The URL you provided is
interesting, but doesn't tell why the keps don't agree wilth the NASA
tracking projection or why SAREX is silent on passes that should
have some activity according to the schedule.

Sure the Shuttle is visible. You just have to catch a pass in which
the skies are dark for you but in which the Shuttle is still above the
earth's shadow and is still illuminated. I've seen it many times.
MIR and Hubble Space Telescope are also easy targets. Some of the
tracking programs will alert you to visible passes.

I think there is some info about this on my Web site:

http://www.erols.com/wmeara

Good luck. 73 Bill N2CQR

>time?
>Thanks,
>Carl
>KB9UNG
Yes to both.... There are pre-arranged contacts, mostly to elementary
schools.
There are also "random" contacts, as time permits. The equipment needed
is modest. The hard part is the opportunity. The crew has their time
pretty well scheduled and only if they use their 'free' time or finish a
series of tasks early will they get on the air. And, of course, they must
be in radio range.
I must confess some surprise that there has been so little apparent
SAREX activity from the shuttle as they executed their major task (Launching
the Chandra telescope) on the first day and seem like there should be some
free time.

This is the last of the SAREX flights. There will be a "replacement" on
the ISS when it is ready.

they have prearranged times for talking with scheduled sites such as the schools. Anyone else can talk to them if they are active during other times and are calling cq, requesting that no-one try to talk to them unless they are calling cq first. this will probably only be when the tang runs out first.

2359. Announcement: WXSat Version 2.5

Newsgroup: rec.radio.amateur.space
Date: 1999-07-25 00:00:00 UTC
From: Marius Rensen <100116.2632@compuserve.com>
Message-ID: <379B6023.53F5B5D1@compuserve.com>
Source record: 11775

Comin on Wednesday the 28 July around 18:00 UTC: WXSat Version 2.5

http://ourworld.compuserve.com/homepages/HFFAX

Many thanks to the Author of WXSat, Christian Bock making such an interesting and useful program for people who are interested in Weatherfax.

What's new in version 2.5?

- Some details of the author's "easy programming style" were not compatible with these new operating systems. Adjustments were made.
- Corrections in the PLL algorithm
- Corrections in the bitmap format (now 256 colors)
- Better handling of bitmap/wave file directories
- New signal processing eliminates the distortions caused by the asynchronous sampling. It does not make too much of a difference in the pictures, but at least the sync bars and picture margins are now nice and straight.
- New synchronization algorithm will yield pixel-accurate pictures from geostationary satellites. Use your favourite animation software kit to create cloud movies.
- New colors. If not satisfied, use your own palette.
- Decoding of WEFAX digital headers
- Conditional bitmap save depending on WEFAX digital header information
- Drag and drop for wave and bitmap files
- Command line input, use your favourite scheduler program to start WXSat.
- Keyboard commands
- Flip for pictures decoded upside-down
- New parameter windows, more buttons, new initialization file format, no complicated editing actions required any more.
- A real help file. It does not contain a bit more of information than a plain text file, but it seems to better comply with today's fast pace.
- As with all new software versions: Bigger, larger, slower, uses more memory, more download time and more CPU power (sorry). It was also finally time to leave the "small memory model" behind.

Best regards Marius

Source record: 11776

Sorry, but I don't remember the source. One that has the same keps is
the NASA site at: http://38.201.67.72/realdata/tracking/

I think none of the keps are current with the actual data due to
orbital corrections and the launch problems. There must be a way to
get up to the minute keps somewhere. NASA has a plot running
at the site listed above. I found that it was off by about 10 minutes
from my tracking program using the latest keps from the same site.

There was no Ham activity at either of the two pass projections,
so I don't know what is happening unless they are too busy to
even turn on the packet robot. The passes I monitored were supposed
to have been during voice operating hours.

While the above mentioned tracking may be NASA, it is not their most
accurate data. Last I looked, it seemed about 12 minutes behind what I
calculate and what is shown on NASA select's video feed (when they show the
3 view tracking map)

I typically use WinOrbit and get an "exact match" between NASA select's map
and mine. I hear that the web version of NASA select's feed may be delayed
somewhat.

2375. Anyone Hear STS-93 last pass?

Newsgroup: rec.radio.amateur.space
Date: 1999-07-26 00:00:00 UTC
From: n5zgt@swcp.com
Message-ID: <7ngq5jlbr1@sloth.swcp.com>
Source record: 11791

Anybody hear anything from the last STS-93 pass?

I heard the following (only two transmissions) at around the middle of the pass, according to my sat-program. NASA's realtime tracking seems to be off a bit:

"...Negative, this is Jeff Ashby. We are uhhh...aboard the space shuttle...trying to reach W4HXC."

"N5SUB, it's great talking to you, too. Great contact."

Does anyone know where the shuttle was around this time? I got my current keps from the STS-93 homepage...is there a more accurate source I can plug in for the next pass?

The pass here in Albuquerque, NM was only 17 degrees above the horizon...though a bit low, I would think I'd hear more than two trasmissions from it.

Thanks es 73,
Brian, N5ZGT

> Nominal? What does that mean -- exactly? Is this some kind of
NASA-speak?

Nominal in this case meant that the antenna was sitting next to a window where it was supposed to be. The commander stated that it was next to the window and that the antenna position appeared to be nominal.

2377. Schematic wanted for ICOM IC-821

Hello all,

Due to 70 cm output problems with my IC-821h, I'm looking for the
schematics of this rig.
ICOM doesn't supply the schematics anymore with it's
Instruction Manual deliverd with this transceiver,
they are asking about $ 50,- for the Service Manual in the Netherlands

Who can help me with a copy (also via Email is O.K.), I think the
problem is on the Main Unit...

Thanks in advange, 73's de Frank PE1KNL

Email: pe1knl@nospam.amsat.org

Please remove the nospam. from my Email adress to reply...

>> Maybe I have some bad info on freq or keps. I'm at EM12 (Garland, TX).
>> Ken K5MBV

O.K. folks, try doing this to get the latest. I get several updated
keps per day:

To get UP TO DATE orbital elements do the following: 1. Send an e-mail
message to: listproc@spacelink.nasa.gov 2.The subject line should be
left blank 3.On the first line of the body of the message type:
subscribe STSTLE Firstname Lastname 4. Spacelink will send you e-mail
confirmation that you have been added to the STSTLE Mailing List. To
UNsubscribe: 1.Send an e-mail message to: listproc@spacelink.nasa.gov
2.The subject line should be left blank 3. On the first line of the
body of the message type: unsubscribe STSTLE. 4 - Spacelink will send
you e-mail confirmation that you have been removed from the STSTLE
Mailing List.

73,
Tom

From: kendurham@home.com
Message-ID: <379c7861.566224106@news>
Source record: 11796

If anyone has keps that have been tested to be accurate on the
last pass, please post them *here*. I've found dozens of keps, but
most of them are the same inaccurate or outdated ones that NASA
is publishing. The others are off from two to 12 minutes for the AOS
and LOS (worthless.) IF you have some gooduns, postum! References
to sites that are supposed to have good keps aren't any help unless
someone has found the keps to be accurate for the last pass.

I have a no code tech license. Some OSCAR systems use 2-meter uplink but downlink on HF bands. Do I need a higher license to use it?

I read in my "new ham companion" that there is a FM 2-meter/70cm bird. I am going to try and get on that first because SSB gear is hard to come by (no $$ ya know). How should I make the call? Working regular DX is easy enough but how do you call on a cross band repeater?

I have ordered the ARRL satellite book but want some imput from people that have done it.

Thanks,
Carl

Go to www.amsat.org for a start.

YOu only need to be licensed for the frequencies that you actually transmitt on. It does not mater where the sat sends your signal from there. This was ruled on by ther fcc when the first oscar went up that used 2 meters up and 10 meters down. YOu may work the sats that have a 50 mhz and highere uplink and it does not mater where the output is if you have a nocode tech or higher license. Not sure where the novice fits in now frequency wise, but if they have any frequencies that fall in the sat bands, they can use them too.

Looks like its a done deal for SAREX on STS-93. There were several
good school contacts and the MIR QSO, but it looks like the random
QSO count is gonna be low, apparently due to the shuttle's attitude
putting the window with the antenna away from earth most of the time.
I enjoyed following the mission and hearing what downlinks I could, and
trying to make contact. I thank all who made SAREX happen over the
years, and look forward to the upcoming ARISS operations. :-)

Interestilng problem: I have received several email responses for new keps for the shuttle, but they all show to have bad checksums. Keps from Celestrak, AMSAT and others all exhibit the same problem when trying to load them to InstanTrack. Older keps will load OK!
I guess they all came from the same source and became corrupted somewhere. I'm giving up on STS-93 anyway. Even when they're actually on a high pass they're silent. Hope the Space Station has their act together better.

Sorry it's to late, the Shuttle Columbia has already landed.
Better luck with MIR, I heard them on voice 7/26/99 @ 22:00hrs UTC as
it flew over New Jersey, But they said they are leaving the station on
August 28, 1999. So we have about on month left and then we will have
no one up there to talk to until the ISS is occupied some time in the
year 2000.

Message-ID: <379EF712.AB3810A6@usa.alcatel.com>
Source record: 11658

When the conditions are correct, the shuttle is easily visible to the unaided eye
as a bright, rapidly moving white point of light.

Last night however, during the landing descent to Florida, it was spectacularly
visible from Dallas, Texas.

It was an extremely bright, orange-colored blob leaving a brightly lit trail
from horizon to horizon. The trail remained visible for several minutes after the shuttle
passed over. This even though there was an almost-full moon near the path.
The shuttle passed about 100 miles south of Dallas (between Waco and Temple)
so it was about 35 degrees up on the south horizon.

All-in-all, probably the most spectacular sighting of any object I can ever remember.

No. You are only responsible for the transmissions of your station. A repeater station of any sort, including satellite, may retransmit those signals on any frequency for which *it* is licensed. That's not legally your concern. You only need be concerned that you're licensed for the uplink frequency.

>I read in my "new ham companion" that there is a FM 2-meter/70cm bird. I am
>going to try and get on that first because SSB gear is hard to come by (no
>$$ ya know). How should I make the call? Working regular DX is easy enough
>but how do you call on a cross band repeater?

Listen to the downlink first. :-)

As a beginner, you'll do best by answering other people's CQs. AO27 is almost always busy when it is available. If you don't hear it when it is above your horizon, that probably means there is something wrong with your receiving setup rather than meaning that the channel is clear for you to make a call.

It is best if you can monitor the downlink while transmitting. That way you can hear your own signals and be sure that you are hitting the bird, and that you aren't doubling with someone else. This requires either two radios, or a dualbander which can do dual simultaneous receive (not all dualbanders can).

Remember that the satellite is almost always busy, and that your access window is short, so keep your contacts brief and to the point so that others will get a chance to use it too.

Hi Paul. I use InstantTrack from AMSAT. It is suppose to be able to control you rotator. It depends on which satellites you are going to work. WiSP is a software package that is used for working the digital satillites. It controls everything. It will control your rotators and radio. It will also do the connecting to the satillites for the packets modes. It can completely automate your digital satillite contacts to bbs. You need to really go through all the information that's available at amsat.com.

Gee. I am real sorry you are so bored. You can only talk to people around the world. You can send and receive pictures from almost any where in the world. It is truly a boring hobby. You can bounce signals off the moon and talk to other hams that way. It is truly a boring hobby. You can talk to people via a satellite. You can send messages to many people all over the world that aren't even hams. You can do public service work and help people during emergencies. It is truly a boring hobby. You could talk to great people that you could not talk to in person. Many leaders of nations have ham radio licenses. There are hams that chase DX. There are other hams that do it with only 5 watts as a challenge. There are hams that are interest is in handling traffic. There are other hams interested in antenna design. There are hams that are interested in the microwave frequencies. It is a shame that there is so little to do in ham radio. I feel so sorry for you. But you might actually plug your equipment in to some power and hook a antenna to it and see what you can hear. You will never know unless you try.

Unfortunately this seems to be a bit location-dependent; here in Australia,
it's probably OK for satellite work, but for terrestrial repeaters,
the license conditions of the repeater say:

Transmission on authorised frequency bands

41. The licensee must not operate an amateur repeater station to transmit a
signal to another amateur station if the originating station is not authorised
under its licence to use the repeater output of the amateur repeater station.

Our novice limited stations for example are only allowed on 2m and 70cm;
another paragraph says you must use access control (tone burst, CTCSS
or DTMF) to prevent those stations from activating the output if it
is on another band eg some 6m/70cm and 10m/70cm gateways we have here.

Since a satellite isn't licensed by the ACA, it should be OK though.

It WAS hyped a great deal by both NASA and ARRL, and AMSAT. The result
was most disappointing. The promotion turned out to be all sizzle, and
no steak.

2408. 2 meter SSB HT???

Newsgroup: rec.radio.amateur.space
Date: 1999-07-31 00:00:00 UTC
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>
Message-ID: <37A32363.882ED2BE@gate.net>
Source record: 11674

Good day,

There has been a great deal of discussion on the AMSAT BB regarding putting together a small, transportable mode J (2 meter up, 70 cm down) satellite SSB rig.

There were comments made that at one time there were 2 meter SSB HTs made and used here in the states. I would like to hear from anybody with knowledge, or who might possess such a beast.

Also, are there any plans for a 5 - 10 watt 2 meter, 12V (or less) SSB transmitter floating around out there in anybody's notebook?

BTW, switchable sideband would be needed, as mode requires a LSB uplink.

I have the downlink taken care of with an ARR 70 cm preamp, and an AR-8000 all mode scanner. The hard part seems to be finding a small/reasonable uplink IF.

Thanks for your indulgence, and I would appreciate any and all comments.

73, Mike in Fort Myers, FL

Hello... I'm new to this newsgroup... I have a quick question.

How can I hear the Shuttle and MIR transmissions on my scanner? I'm using a Radio Shack Pro 51 handheld scanner in the New York City/Westchester Cty area.

Thanks!!!!

-John-

Here you go John:

NJ Central 7/5/92 443.400 (PL 141.3)
NJ Northern 12/12/93 146.610
NY Albany 9/6/91 146.820
NY Long Island 3/30/92 448.425

The 146.610 station is W2FCL repeater in northern Jersey, I pick
it up here in Poughkeepsie,N.Y.

Mir is quite active on: 145.985 MHz FM. You will hear the packet
radio signals on most passes. They are often on FM (voice) in the
evenings. I worked them at 21:03 UTC, last Monday.

Remember that the crew work on Moscow time. They are too
busy to play radio during the day.

Try WinOrbit www.winorbit.com satellite tracking software.
or http://www.sat-net.com/winorbit

www.celestrak.com for up to date orbital elements.
or http://www.sat-net.com/winorbit

http://liftoff.msfc.nasa.gov/RealTime/Jtrack/Spacecraft.html
for on-line tracking.

2413. MacDopplerPRO 1.0 Released

Newsgroup: rec.radio.amateur.space
Date: 1999-08-01 00:00:00 UTC
From: dogpark@interlog.com
Message-ID: <1dvut4q.1r8sxz41e76cckN@hse-tor-ppp25230.sympatico.ca>
Source record: 11679

3D Satellite tracking software for the Macintosh !

Dog Park Software is pleased to announce that version 1.0 of
MacDopplerPRO has been released and a copy can be downloaded from
<http://www.interlog.com/~dogpark>

MacDopplerPRO, will read in the Keplerian elements, calculate the
position and relative velocity of the Satellite(s) you are tracking and
automatically adjust the Doppler shift on both transmit and receive as
well as pointing your antennas.

Without registering, the application will run for 5 minutes and track
the satellite(s) you choose and display the proper Doppler corrected
frequencies that can be entered manually in any rig. When registered
with AMSAT MacDopplerPRO will connect to your radio and rotor controller
through any two serial ports and make the corrections for you once a
second.

MacDopplerPRO features:

* Full 3D projection model of earth and satellites
(PowerPC Only, QuickDraw3D required).
* Realistic Solar lighting model.
* Track up to 16 Satellites simultaneously.
* Seperate windows for Map, Controls and TrackList.
* Added 'locations.dat' for quick location changes:
can store up to 128 locations.
* Track List sorted in order of next pass.
* Ability to 'spin' the camera position about the earth
* View the earth from above site location or above Satellite.
* full predictive dead spot crossing so that a pass is
never interrupted by the beam heading passing a dead spot.

MacDopplerPRO is fully Y2K compliant, and has been thoroughly tested
with the iMac.

2418. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-08-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7o36or$gg9$1@news.hawaii.edu>
Source record: 11684
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O

IT is posible to modify some FM BCB (88-108) radios to receive the 137.X
APT freqs, but it is likely to result in poor performance.
I once took a cheaper improt and, by removing a turn from each of the coils
in the RF and LO stages moved it to where it would cover 135 to 142.
The sensitivity was way down, and while I did get an image, it was really
prety much a wasted effort.
Most BCB(broad cast band) radios just are not sensitive enough even before
you get to messing wth them. Now if you had a good older MArantz or Pioneer,
then you might be able to pull it off.
A better apporach would be to spring for a receiver made by Hamtronics that
is made to do the job. Or get an Icom PCR1000 or even an older Tandy
Pro 2004/2005/2006. But of these, (icom or tandy) only the Icom has the
"right" IF filter to allow the best APT reception.
Good Luck

It is possible, I have such a converter, however the frequency you
mention will use AM, the rx you are using is WBFM, most traffic outside
that is either AM or NBFM so the performance is going to be very poor.
You would do better getting a cheap scanner.

He is probably after receiving weather sats. They don't use AM, but
FM at a bandwidth somewhere between the usual conventions for NBFM and
WBFM. Inconvenient.

A scanner can be used, but only when it has a WBFM mode, and even then
the filters are probably too wide. (they use standard FM broadcast filters
for stereo, 200 KHz wide)

Go to amsat.org and look for a program called fodtrack. In the docs it tells where you can get an interface for about $ 100.

I got one a while back. The softwear is free and if you want to you can build the interface. Not too much to it. The softwear is not very fancey, but it will track the sats very well and work with some radios to change the frequency to follow the doppler shift. It seems to run under windows , and I have ran it with another tracking program at the same time.

It's an outboard box, it was branded "Midland" and purchased in the
early 70's. I can not remember any more details other than it was not
very good, I subsequently bought a scanner and put the other thing
away, I think I still have but am not sure where it is.

Hi William and all friends from this Nostradamus group, look at this :

Nostradamus words:

" L'an mil neuf cent nonante neuf sept mois
Du ciel viendra un grand Roy d'effrayeur
Ressusciter le grand Roy d'Angoulmois
Avant apres Mars regner par bonheur"

L'an mil neuf cent nonante neuf = 1999 => this year

sept mois = July (Nostradamus calculations may not be so accurate, the correct
month could be august) => this month, 11th

Du ciel viendra un grand Roy d'effrayeur=From the sky will come a great king
of terror => A great comet will be seen coming to Earth and this will cause terror.

Ressusciter le grand Roy d'Angoulmois = This fact will resurrect the Mongolian king
=> An asian country president will think that the comet will destroy earth and then
he will think the human race should have been more friendly .

Avant apres Mars regner par bonheur" = before and after Mars will bring prosperity
=> Before and after the comet passes very near from earth, the world will be in peace,
no wars.

I think that Nostradamus prediction was right, and it will occur soon. But it's a
positive prediction, not negative like everybody expects. A big comet will be
seen coming to Earth during the eclipse and will cause terror because it will pass near Earth, but it won't hit Earth. It will only frighten all the humans and after this great fact, people will recognize that they were lucky and that they should stop wars and be more friendly.

Guilherme.

2445. Connecting an FT-847 to a Paccomm Sprint-2 TNC?

Newsgroup: rec.radio.amateur.space
Date: 1999-08-07 00:00:00 UTC
From: Keith Bannister <k.bannister@student.unsw.edu.au>
Message-ID: <7ogf4t$rq7$1@mirv.unsw.edu.au>
Source record: 11711

Hi,

I've got a Yaesu FT-847 & just bought a Paccomm sprint-2 TNC.

The shop didn't send me any schematics, & I was wondering if anyone could tell me which pins mean what on the TNC, so I can solder on a connecter for the radio.

If the above wasn't clear, I need a cable specification for connecting the radio & TNC.

Thanking you in advance

Keith Bannister

Here is the one I use to find out where MIR is right now.

http://liftoff.msfc.nasa.gov/temp/mir_loc.html

Actually, I usually use Instant Track with the up-dated Keps; but
if you just want to do it on line, the above URL will get you there.

2451. Radio Meteor Obs. Bull. July 1999

Newsgroup: rec.radio.amateur.space
Date: 1999-08-07 00:00:00 UTC
From: Chris Steyaert <72650.3513@CompuServe.COM>
Message-ID: <7oib8q$r0f$2@ssauraab-i-1.production.compuserve.com>
Source record: 11717

Radio Meteor Observation Bulletin No. 72 August 1999

1. FORWARD SCATTER METEOR OBSERVATIONS

Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: still working to identify, possibly South German C2,
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

July 1999
```

Note:
this month I continued to adjust the system to record only the strongest overdense reflections, and at the same time to minimise the strong C 4 TVE1 noise in Barcelona.

Enric Fraile Algeciras

Observer: Michael Boschat
Location: Halifax, Canada (63 36'W, 44 39'N, 58 meters above sea level)
Listening Frequency: 83.25 MHz
Receiver: Icom R-10
Antenna : resonant dipole
Antenna Direction: Horizontally polarized with lobes in E-W plane, elev 0 deg
Listening Mode: AM
Recording method: listening by ear

July 1999

Number of meteors heard in one hour interval

```

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference.
. + = 1/2 hour observation only.

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg (= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal generator. Sensitivity: 5 muV (modulation frequency 1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good), measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz) on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution. [Time and details of all individual meteor reflections are stored on file in the University of Ghent format (Prometeos), and are available for further analysis. Reduction software for DOS and Windows available].

July 1999

Raw counts of reflections with a duration of at least 0.027 s during one hour interval starting at UT:

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.
. a lot of direct reception, mainly during the morning hours.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 2 hours

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
smallband resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. difficult month, with a lot of interference, which masks even the
normal morning hour peak activity.

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both
transmitters is processed into same 40 Hz virtual
receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, another channel is used for automatic
interference rejection. Sampling interval: one 4096
point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also
available at http://www.qsl.net/oe8fnk this includes now also Es, FAI
and fireball statistics.

The meteor counts below are corrected for a full hour observing time. If
the recording duration is 20-40 minutes, a dot is shown after the value, to
show the reduced accuracy. Results for less than 20 min. observing time are
excluded.

Counts of reflections longer than 6.5 seconds, assumed
to be overdense.

```

Notes:
. an unexpected meteor outburst occurred during daytime on July 2,
From the known active radiants only the June Bootids have been
over the horizon.
. the Pegasids showed up quite well on July 9, while not registered
in 1997 and 1998.
. the S. Delta Aquarids showed good activity for several days.
see also http://www.qsl.net/oe8fnk for the monthly graphs.
. every day from July 3 to July 28 showed sporadic-E propagation.

Werfried Kuneth

Observer: R.B. Minton
Location: Raton, NM (104 26' W, 36 54' N, 2000 m above sea level)
Frequency: 92.9 MHz
Transmitters: KTZA FM 100 kW, Artesia NM, dist 444 km, geogr azim 178 deg
KSPZ FM 53 kW, Color. Springs, dist 217 km, geogr azim 352 deg
KYBR FM ? kW, Espanola NM, dist 180 km, geogr azim 236 deg
???? FM ? kW, Juarez Mexico, dist 579 km, geogr azim 198 deg
KWFM FM 90 kW, Tucson AZ, dist 798 km, geogr azim 233 deg

Antenna: folded dipole, on 6.3 m high mast, oriented N-S
Observing method: conditioned audio input in the game port of an IBM 386 SX-50 PC, 128 samples/second, DOS/Basic software, automatic

Note:
. lightning noise on June 12, 16 and 24. Some of the other peaks during
local afternoon might be lightning noise to.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Count 1 2 5 0 8 5 3 2 4 5 2 6 3 3 6 4

July 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31
-----------------------------------------------------------
Count 3 3 4 4 2 4 2 1 2 3 6 5 12 11 12

Notes:
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
JST = UT + 9 hours

Sadao Okamoto

------------------------------------------------------------------------
Observer: Chikara Shimoda
Location: Asahi, Nagano, Japan (137 51' E, 36 07' N)
Frequency: 81.4 MHz
Transmitter Location: FM-Japan 81.3 MHz, 10 kW, distance 180 km.
Antenna: 5 element Yagi directed to the zenith.
Receiver: AM-FM Tuner (TRIO KT-1100)
Observing method: Meteor echoes output from center-tuning meter were
recorded on a pen-recorder chart.

Chikara Shimoda

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna : Comet made 50MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 860 Hz voice signal (by FFTDSP) is received
by a low frequency filter (850 Hz) and fed into the D/A converter
and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

2. ANNOUNCEMENT

Pierre Terrier communicates that METEOR v 3.0 is now available on his new Web site:

http://membres.tripod.fr/meteor_astro_elec

The problem remains the treatment of the enormous amount of data collected by METEOR.
A colleague of his writes a program for the automatic analysis of the files. Another one prepares a presentation program, similar to the one of the University of Ghent (colored bar chart).

3. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

Wow, this is an awesome site. And, how 'bout that bit about copying
SOS TO THE WHOLE WORLD on CW from a Russian spacecraft floating away
from earth. That'd give anyone a bit of a chill, I'd think.

FOUNDATION FOR AMATEUR RADIO
c/o Al Brown
8645 TOWER DRIVE
LAUREL, MD 20723-1244

-- For immediate release --

F.A.R.FEST '99 AT NEW LOCATION

The Foundation for Amateur Radio (FAR) will sponsor the 42nd annual F.A.R.Fest amateur radio hamfest on Sunday, September 26, 1999, at Prince George's Stadium 1/4 mile south of the junction of US-50 on US-301 in Bowie, Maryland between Washington, DC and Annapolis, Maryland.

This is a new location for F.A.R.Fest, with a paved area that accommodates over 700 tailgaters. Vendors and other sellers will be able to set up under the canopy of the stadium concourse. General admission tickets into F.A.R.Fest '99 are $5.00 at the gate; $10.00 for tailgating, which requires the purchase of general admission. Vendors and other exhibitors should contact Marry Morris, N4TCI at amateur_radio@hotmail.com, or at 703-971-3905 for more information.

The Special Events station W3PRL-AM will be on display.

Talk-in frequencies are 146.520 MHz and 147.105(+) MHz.

To get to F.A.R.Fest '99:

From points North:
Take I-95 south to the Baltimore Beltway (I-695) to Exit 4 (I-97 South) toward Annapolis. On I-97 South, take Exit 7 (Route 3 South - Bowie/Odenton). Take Route 3 for approximately 11 miles. After passing under the Route 50 overpass, proceed to second traffic light and turn left into Stadium Drive. NOTE: Route 3 changes to Route 301 after you pass under Route 50.

From points South:
Take I-95 North to Exit 104 (Route 301 North). Take 301 North past Upper Marlboro. Go through the traffic light at the Route 197 intersection (Rip's Country Inn will be on the right). At the next traffic light, turn right into Stadium Drive.

From points East:
Take Route 50 West to Exit 13A (Route 301 South). At the second traffic light, turn left into Stadium Drive.

From points West:
From I-70 East, follow directions coming from points North.

From Washington, D.C. or the Capital Beltway:
From D.C., take New York Avenue to Route 50 East, or the Capital Beltway, Exit 19A (Route 50 East). Take Route 50 to Exit 11 (Route 197). Go South on Route 197 for approximately 1.5 miles to Route 301. Turn left onto Route 301 and remain in the right lane. Turn right at first traffic light into Stadium Drive.

For general information on F.A.R.Fest '99, see the webpage at URL:

http://www.amateurradio-far.org/

or contact Al Brown, KZ3AB, at &#65533;amateur_radio@hotmail.com,&#65533; or at 301-490-3188.

F.A.R.FEST '99

Small technical point, we changed calanders since he wrote that, so the date is not applicable (unless he predicted that too). Kinda screws up the millenium up too. Incidentally the 3rd millenium starts 1/1/2001, not 1/1/2000.

Cheers

Well, either there WAS a year zero or there wasn't -- you can't have it
both ways! :-)

I don't think there was a year zero (only computer scientists number
things from zero). So the first millenium runs from 0001 to 1000,
the second 1001 to 2000, and the third starts in 2001. Similarly,
the 20th century runs 1901-2000 (because the first ran 0001-0100).

Hamish VK3SB (a CS student ;-)

Hi Hamish Moffatt,

You were saying......

>the 20th century runs 1901-2000

it sure did....papers from 1901 show that they celebrated the
beginning of the new century on 1 January 1901. Looks like we got
more stupid along the way....._they_ had it right!

"Millenium" and "Next century mean exactly the same thing. They are different words for the same event. It is you who are mistaken. The reason everyone (including me) will party harder on the last day of this year is basically because the year number will make such a big change.

Harro.

I believe your mistaken. It is my understanding that the millennium starts 1/1/2000 but the next century actually starts 1/1/2001.
Frederick

Hello all,
Got a quick question for ya. I'm using WXSat Version 2.4e, and was
able to get a picture from NOAA 1 time. But like a dummy I started
tinkering with the settings in it to try and make it better and lost
everything. My question is what should the settings be in order to receive
the pictures from NOAA??????

Thanks for your time

That is why we had a Woodstock 1999 in the third place!

Not to mention, the reason Jimi wasn't there to attend.

The East Coast USA 16:41 UTC pass- 3 Out the window SSTV shots. Last
picture
cut off and pactched to Voice.
JP relaying to Miles he is running behind schedule and was setting up
for
Europe Vox. Looks good for the next pass.
By the way-
The little girls voice probably was my Son Sean KC2DIJ calling
"India Juliet 11 yrs old" to JP when he first came on.

I wanted to ask..How many watts, and what kind of antenna are you using?

Also i was wondering if anyone can answer this question: What elevation is good when communicating with MIR? I heard that when its about 30 degrees its the best..Is that true? Or can you communicate at 10 degrees? or lower?

Thanks

Felix,

Thanks for the post. Sean and I received about 3-4 SSTV pictures per pass.
Most of todays passes were 13 degrees or so, one was 30 and we could receive good pictures from all. I did not call Mir as I have worked Mir many times and even managed to work JP twice over field day.
They were requesting letting others have a chance so my son who has worked an official Mir school contact as an azimuth elevation anntena operator many times on contacts but never used his call sign wanted to try to log
a voice contact himself. The station here is an FT847 into a KLM 14c & KLM 18c Circular yagi with a yaesu 5400 AZ El rotor. Antennas are basically at ground level and do quite well. SSTV decoding is from Silicon Pixels ChromaPix. Last week Sean recieved SSTV here in the schack and I received the SSTV on a handheld using an arrow antenna and a loptop on a dock along the coast. It was an over head pass and both of our shots were of equal quality.

Voice up link here is done at 50 watts (with pointed beams the eirp is probably over 1500w eirp.) Getting in can be a matter of luck the more folks calling the more gain is needed to be heard 10db over the calling noise floor.

Elevation of your antenna (assuming nothing is blocking it) is not as big a concern as when dealing with non line of sight frequencies.
Most verticals although they advertise gain (towards the horizon do not do well over 30 degrees. It is possible to work Mir
on a handheld with a small amp 35 watts. My twin brother did it. Trick was not what you are using but when and where. He was in the Desert in Nevada at 2:30 am ...had quite a nice chat. Be creative find out when they are on time off and try when every one else down here is asleep. Worked for me.

You and I live on the East Coast, try those passes that go up the coast off shore (we could hear packet this morning on the 4 degree elevation pass. Look at it this way, almost everyone west of us is out of range..Mir is over the ocean and there is not that many folks in range.

Good Luck

Hi folks...

How do the two above-mentioned antennas compare performance-wise at 435 MHz? Obviously the lobes are somewhat different, but how does this translate into ACTUAL ON-THE-AIR results?

I'm specifically interested in LEO satellites (Mode JA 435 MHz downlinks). I am seeking a pretty much omnidirectional pattern, with some gain at lower elevations.

From what I can gather, both are pretty straightforward to build and maintain. I would prefer the discone for its broadband capability, though. Of course, it doesn't mean a thing if you can't hear anything...

TIA/73...

Ditto.....
Have tried my homebrew 1/4 wire mesh discone for working some
satellites and find the same overhead effect. Also appears to have very
low (maybe negative!!) gain even in the horizontal plane. This sure
doesn't help with a weak signal such as a satellite! A 1/4 wave whip
sure beats it. BUT... all this is worth the band width you do get!!
The discone is wonderful for local repeater work... easily handles 144
/ 220 / 440 (perhaps higher but 440 is the top of my capability)in a
small package from one antenna / one feed line.
I have used crossed dipoles for the birds but only over a wire mesh
ground plane which can be bulky to install.

Discones have a radiation pattern the same as a vertical dipole so you
would get very little signal from a satellite directly overhead ;-(
I was looking at a nice military uhf discone a while back. solid brass
and _silver_plated_ !

I have a Nevada discone that I have tried to use for satellite
work. It doesn't. For terrestrial it's ok, if you don't mind
the fact that it has only slightly more gain than a dummy load :-)

I concur precisely with the description of the "observed" overhead
null, I have experienced identical behavior.

A simple antenna that works ok for satellite is a horizontal dipole,
or two dipoles fed out of phase called a Turnstile-Reflector.
The "eggbeater" works ok too, but is a little more difficult to homebrew.

Good luck and 73 de

Thanks for the reply,
I have a little H-T with a 30 watt amp, and a
mobile antenna out the window on the 16th floor. I am right next to the beach
(coney island) but my windows are facing to the east. And since my antenna
doesn't have line of sight i would not be able to get anything from MIR if i
wasn't east of me.

Tell your son i wish him luck in making a contact with JP. It's really nice
hearing some younger people on the Radio.

Depends on your antenna. For a verticle like a Ringo - horizon to
about 40 degrees for transmitting to the station. Anything above they
won't hear you. Recieving is no problem. Don't forget doppler
shift....

The diskcone is a good wideband (50 to 500 etc) antenna. But it has
serious shortcomings compared to almost any "single frequency" antenna.
There will be a bad overhead null (depending on many variables that I
have never been able to really map, the null can start from 40 to 45
degrees but will always start by 60 degrees). This overhead null can go
to near zero response, ie no signal, at all, period. I use a diskcone
and have been slightly fustrated when a military aircraft goes
"directly" over me. Because the plane just vanishes.
I have used a stock radio shack discone for NOAA APT reception (136.xxx)
and, until the bird get too high, does an "OK" job. Crossed dipoles are
much better, and a QDH antenna is the best. When you have a pass that
just crosses the horizon, a good beam can not be beaten.
Good luck

2487. August Meteor Shower??

Hi Andrew ,
Meteors from Perseids are about to peak on August 12th
13th,from what i've read in the ameatur.astronomy news group,there will be
upto 200 an hour.

They will appear in the northern sky ,north in the early hours of the
morning.

I live in Australia and that constellation will be low to the North on those
mornings but i will have a look.

I personaly have never had a meteor contact but would been keen ,have power
on 10m but not much power on 6m.

cheers from down under,,,,

>
>--
>Den Spiess W2DEN

The "ground plane" was fashoned from two 1/2" angle aluminium fastened to the
mast with muffler u-bolts. I went that route instead of the screen because
it was easy to build (cut the angle aluminium to the right length, find the
center (length wise), go 1" each driection and drill 2 holes in in piece
and mount. I used scrap RG62A/U(with the ends sealed with rtv) for the
phasing harness. Very cheap, and easy to build and use.
The QDH is a lot tougher to build at home, but the results are worth it.
The QDH (patterned after the plans in QST) is a great atellite antenna, good
for the civil aero band, and useable over the 2MTr ham band.
The main problem that I had with the crossed dipoles was the bird mess
directly under the elements. By bird mess, I am reffering to those wonderfull
white droppings they produce.....

I sometimes work AO-27 with a gain rubber ducky and my FT50 dual band HT. Never said it was easy, but I've done it numerous times. Weekday passes are less loaded, and offer better opportunity.

The hard part about working the LEOs is hearing them. Most have sensitive enough receivers, one should concentrate on the receiving end first.

The diskcone is a very poor satellite antenna. First, it is unity gain, and most satellites are considered weak signal. Secondly, it has poor coverage above the horizon.

The best antenna for LEO work is a circularly polarized antenna. Since most satellites are spin stabilized, they tend to generate a CP pattern regardless of what antenna they use. Also, as radio waves interact with the ionosphere, another spin is imparted, called Faraday rotation. This effect is most noticeable on mode J uplink, 2 meters, and mode A, both 10 meters and 2 meters.

I use a pair of homemade turnstile antennas for working RS-13 (2 meters up, 10 meters down). I also use a pair of high gain CP yagis, with switchable polarity sense with great success for working the other LEOs. If you want a station capable of working all of them, horizon to horizon, plan for a similar setup.

But, this was not the thrust of this post. Forget the diskcone. A turnstile, eggbeater type, QHA, or Lindenblad will give you better performance.

Jerry, K5OE, has spent a great deal of time developing antennas for LEO work that are cheap, stealthy, and fair performers. His web site is:

http://members.aol.com/k5oe/

You might like to peruse the http://www.amsat.org site and wade through some of the informational articles found there.

If I can be of further help, let me know.

2492. August Meteor Shower??

Newsgroup: rec.radio.amateur.space
Date: 1999-08-10 00:00:00 UTC
From: KD5CAS@iamerica.net
Message-ID: <37b08f4a.28298457@news.iamerica.net>
Source record: 11558

Source: http://www.skypub.com/sights/meteors/meteors.shtml
and http://www.skypub.com/sights/skyevents/9908skyevents.html

Perseids (Aug. 8-15). This best-known meteor shower has a broad peak, and it occurs at a pleasant time of the year for Northern Hemisphere observers. With the Moon near new and out of the sky all night, 1999 should be a great year for the Perseids. In recent years there have been two peaks about a half day apart. The morning of August 13, 1999, should be the best time to watch, but rates should remain high for a day or two on either side. A single observer may see 50 to 100 meteors per hour under dark, rural skies in the hours before dawn. Rates in the evening are much lower. Suburbanites may expect closer to 25 to 40 meteors per hour even during the peak predawn hours. Brief outbursts sometimes enhance these rates greatly.

Conditions couldnï¿½t be better for this yearï¿½s Perseid meteors, expected to be most active just before dawn on the mornings of August 12th and 13th. The Moon is nowhere to be seen, thanks to August 11th's total eclipse, and anyone at midnorthern latitudes who can escape city lights might see four or five dozen meteors each hour. Fewer Perseids are expected earlier on these nights and for a week before and after. The tracks of the Perseids, if extended backward, intersect at a radiant point between Perseus and Cassiopeia not far from the Double Cluster.

The Perseids have declined in strength since 1992, when the showerï¿½s parent comet, 109P/Swift-Tuttle, passed through perihelion. In recent years the International Meteor Organization (www.imo.net) has monitored several distinct peaks, especially one that seems related to a "new filamen" that the Earth crosses eight hours before reaching the traditional Perseid stream. From a wealth of data acquired in 1997, the IMO predicts that Earth will pass through the new filament at 23h Universal Time on August 12, 1999, when predawn observers in Europe might see 100 or more meteors per hour. The Earth will enter the less-intense traditional stream at 5h UT on the 13th, favoring observers in eastern North America.

Message-ID: <37b0e283.1919580711@192.168.0.1>
Source record: 11560

I have read the new ARRL satellite book, but it lacks complete details
on building a working station. I would appreciate advice as to the
feasibility of the following 9600 baud PacSat station:

Icom IC-207H dual band mobile (includes 9600 baud port)
(Does anyone know if this model is full duplex?)
PacComm TNC-NB96 or Spirit-2 TNC
(Any other recommendations?)
PacComm PSK-1 Satellite Modem

I will probably use Wisp for software.

Your assuming they can mount it in the window. Yes, maybe they
could have taken a few snap shots of it but remember, the crew is busy
and they were video taping it from what I understand. Ham radio is not
a primary concern of the crew. Maybe they saved a few shots for later
downlinking...

I have not seen any pictures yet, but a potential problem is that the
moon shadow is moving quite quickly compared to the scanrate of a
weather satellite's image system.

I did think of that but giving the fact that the swath of the APT picture is about ...hmmm...1500 miles or so you should have seen something even if it was blurred.

Resurs n4 was in the ideal position over me at the exact time of the eclipse, if Jvcomm32 had not been so bad at syncing on Resurses signal I might have got it as by the time the shadow would have been more or less right under resurs it would have been only JUST past me .

Never mind I will ask somebody to dig me up next century to try again :-)

Must go now...going outside to see if i can spot any of this meteor shower tonight !

WRONG!!! That is NOT the tribulation foretold by Jesus. The tribulation period doesn't begin UNTIL the AntiChrist is on earth. But by then, the Christians WILL NOT be here. The Christians will be raptured into heaven to meet the Lord BEFORE the AntiChrist starts his shit. Read the Bible and get it right if you're gonna preach. And stop with the dates. No man knows the hour of his return, not even Jesus himself, only the father. Giving exact dates and then nothing happens gives Christians a bad name. Then, people won't believe us even when we're telling the truth. I don't know the day, or the time, or anything about a meteor or any bullshit like that. I DO KNOW that Jesus is coming back, he will take us from the earth BEFORE the AntiChrist rises, then he's gonna come back again and kick some Satan ass!!

2509. Re: APT Eclipse Picture.

Newsgroup: rec.radio.amateur.space
Date: 1999-08-13 00:00:00 UTC
From: Paul Telco <paul@telco1.demon.co.uk>
Message-ID: <934505547.289.0.nnrp-09.9e984783@news.demon.co.uk>
Source record: 11575

From my home in the UK I was fairly well placed to get APT pictures of the eclipse but my results were disappointing. I did get the Resurs picture though :)

I was hoping to see more distinct shadow areas, but for those who are interested the eclipse is definitely present in the bottom left of the image.There is an unusual distortion of the image towards the end of the signal which I have never seen before on any APT pictures. Could it be a result of the eclipse itself? Maybe shading the solar panels on the satellite?

Did anyone else do better than this? I would love to see other WeSat pictures of the eclipse .

The image is at www.telco1.demon.co.uk along with another
from a while ago that shows smoke plumes from oil rigs in the north sea (ecofisk field I think).

Let me know what you think.

Paul

that would be something i suppose, and Tom I have seen shots with the camera left pointing out of the window lots of times on SSTV, so i presume it was mounted rather than hend held as it was in the same place on severeal orbits.

I doubt if they can transfer pics from another system into the sstv system ?

cheers

ian k.

Hi Mike McGuirk III,

You were saying......

>WRONG!!! That is NOT the tribulation foretold by Jesus. The tribulation
>period doesn't begin UNTIL the AntiChrist is on earth. But by then, the
>Christians WILL NOT be here. The Christians will be raptured into heaven

What does that fancy little phrase mean... 'raptured into heaven'?

>to meet the Lord

Which Lord? Is this the father? If so, why not call him that?

> BEFORE the AntiChrist starts his shit. Read the Bible
>and get it right if you're gonna preach. And stop with the dates. No man
>knows the hour of his return, not even Jesus himself, only the father.
>Giving exact dates and then nothing happens gives Christians a bad name.

Translation: giving exact dates makes it easier for non-christians to
see how full of shit some people are.

>Then, people won't believe us even when we're telling the truth.

...even when you're telling the truth? This is an admission that you
lie some of the time.... Very telling!

>I don't
>know the day, or the time, or anything about a meteor or any bullshit
>like that. I DO KNOW that Jesus is coming back, he will take us from the
>earth BEFORE the AntiChrist rises, then he's gonna come back again and
>kick some Satan ass!!

How do you 'know' this? I will accept that you believe it, but you
cannot 'know' it!

Well, I'm not sure the camera is window mountable but they do move
it around quite a bit. I did see a photo of the camera once, it's
whiteish in color, round with a flat base if I remember right.

>I doubt if they can transfer pics from another system into the sstv system ?

You can capture and save photos to send later. Like a digital camera
does.

if the sstv system can capture and store-forward then if they did capture pics like that then why not tx them live aswell ?. unless it can't capture/tx and capture/store at the same time

by the way Tom what is the OFFICIAL news on MIR's de-orbit ?, I am getting so tired of all the false leads floating about and the officiasl sites dont seem to say much ?

cheers

I really con't answer that one. Again, their sked was probably busy
at that time.

>by the way Tom what is the OFFICIAL news on MIR's de-orbit ?, I am getting
>so tired of all the false leads floating about and the officiasl sites dont

This is the info I have put on my web site News page:

Here's the latest on Mir's schedule: The crew will leave the station
around August 23rd and around February 2000 a new crew will go to the
station. The current planned retirement of Mir is for around February
2001. As of August 16th the following ham gear will be turned off; the
Safex/Marex-NA PMS and SSTV. They will be turned back on when the new
crew arrives. This is being done for safety reasons. This info is per
Miles Mann, WF1F.

thanks Tom, I know MIR has been great over the years and it will be sad to see her go in the end but why do they keep stretching out the de-orbit date as the ISS has been delayed so much already, the Russians do not have the money to do both.

Is this a "pride thing" or are they doing it for a real reason ?.

you seem to be more in the know about this than me !!

nice site, I have bookmarked it for future reference

They believe she's still has some time left in her. Maybe, maybe
not. Mir has went far beyond it's call of duty and they should be
extreamely proud of her but it's time for them to start focusing on
their part of the ISS.

>Is this a "pride thing" or are they doing it for a real reason ?.

Pride is part of it I think.

>you seem to be more in the know about this than me !!

Good day,

This is the second appeal to worldwide operators for cooperation is assembling a unified list of call book servers available via the WWW. If you have additions, deletions, or ideas for this list, please forward them to me directly.

Thanks to all those with corrections and deletions from the original post.

I see this as an evolving FAQ, and decided on these groups because of their international audience. I will repost as a FAQ if I get enough response to fill in the gaps.

If someone from Germany and the UK would send a note telling me why the old sites seem to be dead or now commercial, I will include an explanation in the FAQ.

Thanks for your help, and 73 from Mike in Fort Myers, FL

Hello AC6V...

Excellent web site! I've made it on of my favorites and have shortcuts to a couple of pages.

Your graphic link to "Know Code International" takes you know-where fast. ;-)

That will be exciting, I have a feeling if I'm around then I'll be a
very old man. It'll be your turn to experience the thrill of man
walking on another world.

Yes, the moon landings were the most exciting era of our space
program. I was glued 6 inches away from my TV at age 11 when Armstrong
went down the ladder. I remember it like it was yesterday. Got the
next day off from school like a lot of other kids. I sat there
AWESTRUCK, jaw dropped wide open.

2530. SSTV on MIR.. but picture garbled?

Newsgroup: rec.radio.amateur.space
Date: 1999-08-15 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <7p66lk$o15$1@arachne.labyrinth.net.au>
Source record: 11596

Just heard SSTV from MIR for the first time here -- kind of ironic
given that they're going to jump ship any time now. The copy was good,
but the picture I received (using Robot 36 mode, in Win95SSTV) was, well,
just a bunch of coloured pixels at random -- you wouldn't call it a picture
exactly! Anyone seen this before?

cheers
Hamish VK3SB

Hi Ian,
I just noticed that a friend I let use my account today briefly
changed my e-mail address name in the preferance settings in my
newsreader. Some joke. The bastard has been taken care of. Sorry for
the lude address in the last few prior posts I made....

2544. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-08-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7pb5maguj1@news.hawaii.edu>
Source record: 11610
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

It doesn't matter how many times you ask: the answer
remains the same,

Hubble uses TDRSS to talk to the ground, and even if you
were in the downlink footprint, it's unlikely you could
demodulate (or even hear) anything.

Why not check out the Hubble and TDRSS web pages yourself?

Right on Rick. Another person that thinks CW will die if we dont
force everyone to learn it before thay can have access to HF
frequencies. Well I got news for all of those folks:
as long as they keep using it, it will not die. Nor will lowering or
eliminating the code testing requirements allow Amateur Radio
to become any more like CB radio than it already is. especially if
ALL of the test question pools were changed, and not made public.
What has any of this to do with Shortwave? Not much except that some
SWLs listen to the Hams sometimes.

What an idiot....good idea...don't like the deal with the ARRL policy,
so you quit. That assures you of NO VOTE AT ALL. Must be another
stumper.

Gees Rick you're just finding this out now? I knew that 25 years ago by attending 2-3 ARRL local meetings. In the mid 70's if you mentioned the word "computer" to these guys, they'd laugh in your face. I never saw such a group of technologically stagnant people in one place who were stuck in one mindset. All these guys wanted to is talk about "Skywarn" and the fact that "The Russians might be coming". When certain people recognized the potential for the diminishment of Amateur Licenses, they took a "wait and see" attitude. This "wait and see" attitude lasted in excess of 20 years and now they realize they are in trouble.

Who's laughing now? The ARRL membership is down drastically from 10 years ago. They don't have the political clout they had 20 years ago and with the decrease in the total number of Hams, they cant justify the use of the current allotted bands with the FCC. There are now more Technician Class license holders than all other license classes combined. What does this tell you?

Its called Dummying Down. When the ARRL had some major political clout 10-15 years ago they could have made some drastic changes, however now like always, their actions are too little too late.

CW is dead, no "thinking CW will die" about it.
It only for nostalgia now, except in the rare event that someone's mic doesn't key up or their cell phone can't dial 911.

Especially since the mode of choice is encrypted satellite data
communications. Ever heard of the tactical internet? This is what
the U.S. military will be using in the very near future. Voice
communications will still go on, but most of the communications will
be data from PDU's to central data servers.

2567. HELP! With KPC-3 and APRS

Hello,

I have Kantronics KPC-3 Version 5 Firmware. Is it possible to configure the
TNC for APRS? Or do I need version 6, with the GPS commands?

If anyone can help me get set up I would really appreciate it.

Thanks

VA3HST
Paul.

Depends on what you are trying to do. If you just want to run APRS on a PC, it'll work fine. If you want to build a stand alone tracker, you'll need the prom upgrade. The current one is 8.2, and about $60 from Kantronics. I understand there are images of that prom available, but using them would be wrong. ;-)

You will need to upgrade to at least version 6.2 EPROM to use the GPS features. I will be upgrading 2 TNC's to the latest version if you want to buy the old EPROMS.

73,

Willie

I'm so thankful that HAM's are an odd little group of misfits with backward thinking and always
willing to make something very small and insignificant(decscribes HAM's in general)into something
supposedly universe changing like code.
I can't wait when your little code is dropped and your sad little pathetic faces frown, with tears
running from your eyes as us modern, normal people come on the bands and stomp all you old nostalgic
argumentive types a new asshole!

| On that we can agree, i.e. pretty useful for some people.
| I would hate to search for a calf in 500 wooded acres
| without a horse.

Funny how people like you are so bold and brave while nameless hiding behind your keyboard.

What are you hiding (from)??

. <@.> wrote in message news:421469E35E997330.CF9DF08F5258408D.028C7F0D43262583@lp.airnews.net...
You don't get it.
I said try to directly try to filter me using Outlook Express's filter mechanism.
Outlook Express interprets my username as a wildcard, which will filter out everyone.

The worst offenses being committed in the extra sub-bands. This could lead one to believe that higher speed morse code causes damage to the ethical centers of the brain and for that reason should be banned as an authorized mode.

CW and horses have their good features and were useful in their day, but how many of us are going to ride a horse to work tomorrow or use CW to ask the boss for a raise?

You're right Tom, but Paul wants to use the KPC-3 for a stand alone tracker without a PC hooked to it. To hook it directly to a NMEA GPS Paul needs version 6.0 or above.

Version 6.0 of the firmware adds GPS interfacing capability. Eight new commands are added and the intface command is modified. (Taken from the KPC-3 manual addendum for version 6.0)

Heck I gave up my membership about 17 or so years ago. Thought the old bunch of fuddys had their brains in their watch pocket. I think the restructureing plan is the best thing the FCC has done in years. I say the FCC, because if you had really read the FCC docket they even uttered the words and considered even two or three classes of licensing. I see that you still cling to the old and archaic means of transmission. That in itself is not bad. It is rather good that you do. I have issue with your conceptual ideas as to why license upgrades need to be tied to proficiency of a mode of transmision while no other upgrade from the present general class is? That mode of transmission being CW. Even the FCC said that the need for proficiency in CW is now questionable. The ITU only requires a minimum proficiency in CW. One thing the ITU does not spell out is how proficient, 5 WPM, 10 WPM, 20 WPM. None of those. The ITU gives no speed requirements to it's member communities. In fact WARC 2000 or 2001 may entertain the rescending of the requirement for CW for isueing licenses below 30 MHz. I wil never believe that CW go away. Heck AM on the amatuer bands has not gone away. I really think that you should go into the doctor and get a prescrption or two and calm down. The world of amatuer radio is about to make some changes. Some will like you seem to deny that change is inevitable. Some welcome it.

You might be right. I thought that the 6.2 addendum had the "new" GPS commands detailed in it. Once you have the correct EPROM it works great, I have set up 3 trackers with KPC-3's so far.

I think you guys have the wrong numbers.

'Ver 8.2' has features that allow the tnc to be connected to a gps and send the NMEA data over the air. This allowed a setup with a tnc, radio and gps to be used as a tracker for other APRS stations. The 8.2 could be a full APRS station if the computer had an additional serial port.

The '8.3' version allows a gps to be connected to the radio port of the tnc so you could have an APRS station with a computer with only one serial port.

BTW the KPC-3+ while a good tnc is not very user friendly. Get some help from the aprssig group that can be found at www.tapr.org.

I have not even seen a horse in several years except on TV, and I'm in the heart of Dallas. Also, this is not about horses, it is about an obsolete, nostalgic mode that is only useful when a microphone
or cell phone doesn't work.
BTW, I'm also an electronics engineer but I don't have any patents, though a company did steal an idea from me and
patented it.
I invented the whole concept of wavetracing.
If you don't know what that is, go to www.aureal.com and see what they stole from me and see what they illegaly patented.
As far as Intel, Intel is a ripoff, they release chips 5-10 years behind their time compared to what they could give us.
The only reason intel doesn't give us what they could, is that if they did, we wouldn't have to buy a new CPU except for every
5-10 years, thus cutting their cash flow considerably.
You agree? If not then maybe you aren not aware of military IC's and how they are 5-10 years ahead in technology compared to
the crap the public ends up with.

I realize that the above message is little more than a troll, but
for the benefit of the thoughtful, I'd like to point out that no
matter how many people foolishly "quit the ARRL," that will
have NO effect on restructuring.

Restructuring has gone through the comment and reply
comment periods, several ex parte presentations have
been made, and (from what I understand) the Report
and Order is done, or virtually so. All that's left is the
approval and issuance of the R&O. "The fat lady" is
simply rehearsing now and the concert will likely commence
quite soon.

Actually, an older KPC-3 with version 6.0 firmware does work with a GPS for stand-alone tracker purposes, with the INT set to GPS. If you have an HSP cable, then you can use a laptop at the same time with the TNC in TERMINAL mode. I used this combination for months, then got a KPC3+ with version 8.2 and continued to use the HSP, and eventually got a firmware upgrade to version 8.3 so I could get rid of the HSP cable. That way I could also leave it to run by itself as a tracker when the laptop wasn't hooked up. So if someone does find a KPC-3 with version 6.0 firmware, it will work, just not the same as a newer KPC-3+ with 8.3 firmware.

Fun is not a practical purpose and practical purpose is what I was speaking of.
My intention is not to be a killjoy but to put code where it belongs, in the category of fun and nostalgia,
not something worth even devoting a thread to as far as life saving capability in this modern age, as I would feel
much more safe calling 911, or using a mic than hoping that someone understands morse code.
That's one of the differences between normal people and HAMs.
HAMs are such backward people that if they fell and couldn't move, instead of having a cell phone on them
to dial 911, or an emergency alert transmitter, they would carry a VHF radio on them and hope that someone out
there would respond to their cry for help.
Completely backward thinking from the logical way of thinking that if someone thought enough of emergencies to know
morse code, they would be much safer and have a much better chance of surviving with a cell phone.

The problem I see with ARRL and FCC is they are ran by HAMs who inject their personal preferences and gains
into HAM tests, protocol etc. thus eliminating those who they think should be eliminated, not having anything to do
with fairness, what is right and wrong or the way things "should" be.
Therefore, instead of HAM radio being a group of people communicating on a level requiring a license in order to not
cause harm to self or others, it is more of a situation of a bunch of elitist tyrants opressing the people below them, which
is a good summary of HAM radio in general at this time.

2608. Seeking advice building ham/sat station from the ground up.

Newsgroup: rec.radio.amateur.space
Date: 1999-08-20 00:00:00 UTC
From: Mike <richo@ntplx.com>
Message-ID: <37BCEBF4.2D5DE750@berzerker.net>
Source record: 11524

Hello all. I have recently become interested in Ham and the amateur satellites and have been reading up on both topics. I don't own any ham equipment, except an old TNC I found in a drawer, which suprises me because no one in my house has ever used ham, much less packet. It is a BayPac BP-1 2400 baud "Packet Modem," and it plugs directly into a com or serial port (0 distance between the port and the device, the only cable leads from the TNC to the headphone/microphone jack on the radio.) It is made by Tigertronics Inc and I have found information on the BP-2 (sucessor to my model) at http://www.tigertronics.com.
I have a 9-foot (rough estimate) CB antenna on my roof, which I can recieve 2m/10m/70cm quite fairly(it has weaknesses, and I am looking for a way to tell which bands this antenna is useful for.), although I can not pick up the faintest blip from any passing satellite. The antenna is radio-shack purchased a few years back, a single pole pointing straight up (thats all the information i can gather from it). I would like to include this antenna in my station if possible for terrestrial RX. I was able to pick up some packet transmissions on a 2m freq. I am using Realistic UHF/VHF High-Low scanner for recieving, using freshly updated keps for tracking. Other than that, the only other radio equipment I have are three CB's. I am looking to buy entirely used equipment as it should prove to save me some dollars. I am running on a budget of 200-400. I know this isn't quite enough to build an ideal sat station so I do not plan on full sat activity until I can purchase a bit more. I want to build my antenna(s) and also anything else possible. I am especially interested in all types of packet, especially tcp/ip, as well as terrestrial 2m/10m. I want to purchase a rig that is capable of 9600 baud internally and use the 2400 baud TNC for another use. I would also like to listen to downlinks from various satellites, even if I am not capable of transmitting to them. I am extremely interested in pacsats, and recieving SSTV from weather satellites and such.
The advice I am looking for is in an inexpensive rig to be bought used. Preferably one that would allow me to TX and RX on different bands at the same time. Finding an affordable one is make-it-break-it for my station. I would like to transmit on 10m as well as 2m for satellite. As I said before, any of these components can be skimped to not drive the price into the thousands of dollars. I'm not sure which features make for a more expensive radio. Also if I could find two cheap transcievers to take the place of one full duplex radio it would be ok. To go along with these would be an ideal TNC, if not built-in. After that, comes my decision of which type of antenna to build. I want one with decent sky coverage. I don't really want to set up more than one antenna for my entire station but I'm guessing that might not be possible. It would be much less of a problem if I could keep the antennaes indoors, such as in my attic. I'm not too interested in displaying a big ugly metal

monstrosity on my roof, my neighbors swivelling VHF antenna is ugly enough. ;]

Basically in one short sentence I am looking to buy used a single full-duplex multi-mode transciever or 2 transcievers to do the same job, and an antenna that would provide well-rounded throughput for terrestrial packet, voice, and satellite operation. I am also open to suggestions for recieve antenna pre-amps and other components that may boost performance.

Oh, and btw, I'm unlicensed but I plan on acquiring my Tech before any of this goes into operation. I am 17 years old with some RF knowledge but not much operating background. I'm also a UNIX freak and would really love to see some unix-based packet servers strapped onto any ol' orbiting object ;]

Thank you for putting up with my bulky text, as you can tell I am enthusiastic about operating in the near future. Anxiously awaiting replies.

That is NOT a TNC! A TNC is a standalone computer that includes such
a modem and has an RS232 interface to the terminal or computer used to
display the text.
But it does not matter much, it is not usable for satellite packet anyway.

> I have a 9-foot (rough estimate) CB antenna on my roof, which I can

That isn't a surprise. You will even have difficulty hearing anything
with a purposely made omnidirectional HAM antenna!
(except for some relatively high powered narrowband FM repeater missions)
Remember these satellites are somewhere between 500 and 3000 km away
from you, and transmit only about 5 Watts of power! That is not going
to give a signal like your local broadcast station...

>have are three CB's. I am looking to buy entirely used equipment as it

Well, it falls probably short by a factor of 10 or so... unless you can
find someone who is really bored by the hobby and wants to sponsor an
upstart.
I think you should forget about pacsat activity for now, and concentrate
on terrestrial packet. You could try to listen to a MIR pass, if you
call that satellite packet. But the real 9600 bps packet satellites will
be out of reach for some time...

> The advice I am looking for is in an inexpensive rig to be bought

>price into the thousands of dollars.

Unfortunately, in the category you are looking for there are only the
expensive multimode multiband transceivers. Like the FT736 plus a 10m

module.
Multiband FM transceivers are generally not usable to transmit 9600 baud
packet, even when the infosheet indicates they are. There also often are
strange limitations on split-band operation that the unit does not have
when operated with voice, and problems with tuning the frequencies to
compensate for doppler.
So something like the FT736 is still the only way to go unless you go
for separate units for each band (which you may be able to get cheaper).

>with these would be an ideal TNC, if not built-in. After that, comes my

>monstrosity on my roof, my neighbors swivelling VHF antenna is ugly
>enough. ;]

Well, that is really necessary for 9600 baud. You may be able to get
a glimpse from the signal with an omni, but to really get something
downloaded and to connect to the satellite you will need a pair of
azimuth/elevation controlled beam antennas. They do not need to be
super-large (e.g. 6el on 2m, 20 el on 70cm), but simple omni's just
won't cut it (especially not when mounted indoors).
Maybe you better look at the 1200 baud PSK satellites, they require
a somewhat smaller signal (but they do require SSB capability).

> Basically in one short sentence I am looking to buy used a single
>full-duplex multi-mode transciever or 2 transcievers to do the same job,
>and an antenna that would provide well-rounded throughput for
>terrestrial packet, voice, and satellite operation. I am also open to
>suggestions for recieve antenna pre-amps and other components that may
>boost performance.

The situation also depends on the place where you live. For local packet
an omni antenna usually is better suited, so you basically want a 2-yagi
setup plus an omni. You can construct these things yourself if you
are mechanically inclined.
Preamps are usually required. In principle you should only need them when
you have long cable runs or a transceiver that does not have optimal
receiving performance, but in practice this at least one of these is
usually the case.
I used home-made preamps installed under the roof, relatively close to
the antennas, with two cables running from there to the shack. This
saves on coaxial relays. I first used a commercial preamp but it turned
out to be crap: intermodulation all over the band. When you are in a
location where strong signals are present near the amateur bands, some
consideration should be made for filtering and/or high-signal capabilities
in the preamp, while many of the then-available commercial preamps just
battled over having the lowest noise figure in the catalog...

> Oh, and btw, I'm unlicensed but I plan on acquiring my Tech before
>any of this goes into operation. I am 17 years old with some RF
>knowledge but not much operating background. I'm also a UNIX freak and
>would really love to see some unix-based packet servers strapped onto
>any ol' orbiting object ;]

There is software for Linux that supports the PACSAT protocols (which
you will need, because a basic terrestrial packet program can not be
used with them), and also software to predict the orbits and control
the antenna rotators once you have found that this is very convenient
to have. I have operated a pacsat station some years ago (from the
beginning of oscar14 operation, I think about end-1990, until I moved
in 1995 and had to take down the antennas), and I have used Linux for
it when I had my Linux system running (before that I used an Atari ST).

>Thank you for putting up with my bulky text, as you can tell I am
>enthusiastic about operating in the near future. Anxiously awaiting
>replies.

I advise you to get some experience with terrestrial packet first.
Use a BBS, communicate with nearby stations. The satellites are not
much more than flying BBSes (using another protocol), but the station
requirements to operate them are much higher. They are certainly not the
way to get started. When I first used packet satellites, I had my license
for about 12 years and was using packet for more than 3 years. I had
also been operating on Oscar10 in voice (SSB) for some time. That way,
you collect some stuff over time instead of having to make a long list of
"things still to be bought before I can receive my first file". Get a
license, visit some local swapmeets to get some inexpensive equipment,
and use terrestrial packet. Then, see if you still want to get on
pacsats and draw up a longer-term planning to achieve this.
When you do, you can first make your station usable for 9600 baud
terrestrial packet (when available in your area), then setup a better
antenna system, then setup a way to control it automatically, setup
automated tuning of the transceiver(s), etc.

Most important of all: see it as a technical challenge that you want
to meet, and be satisfied with just the result (being able to send
and receive files). Don't think that this is going to be your cheap
way to send files all over the world. It is not going to be cheap,
and it is going to be a lot of work. You are probably going to be
disappointed when seeing what is available up there, so that should
not be the goal of your mission.
When you just want to send and receive files, use Internet.

You're saying the military has access to fabs that can do stuff 1/30th
the size of what the latest PIII is done on? Because smaller and
smaller fab sizes are the variable in microprocessors. Better,faster
non-x86 architectures are commonly available but no one buys them.

What about voice operation? Do I just need the controlled antennas to provide clear enough reception with 9600 baud or for voice too? I've heard simple omnidirectional antennas with good sky cover would work exceptionally. Of course, im not putting it past me that everything I've heard so far isn't exactly truth.

Well, I've been active on the Internet since 1994, when I was 12. Ive since

worked as a UNiX administrator for a nationwide ISP. I could let my resume reach 10 pages if I wished. I am not expecting a replacement for the Internet over packet radio (although I admit it would be nice to get on some of those tcp/ip packet networks in europe) And I wouldn't think of doing many file transfers at 1200 or 9600 baud, because I remember the patience involved when using 1200/2400/9600 baud telephone BBS's before my net days came.

Thanks, Rob, for helping me get a better view on what I should aim for. Much appreciated.

Mike

In that case, make sure that anything you buy (especially anything that
will be used to transmit later, i.e. the 2M transmitter when accessing
the current lot of satellites) is really suitable for 9600 baud.
Most commercial transceivers that are marked "9600 baud ready" really
aren't. It would be a waste of money to spend a lot on such a box.
Multimode transceivers (those that include SSB) are usually OK, because
their internal block diagram is different from FM-only transceivers.

>> Well, that is really necessary for 9600 baud. You may be able to get

You can access some satellites operating in "FM repeater" mode using
omnidirectional antennas, especially when you are satisfied with only a few
seconds of communication just to exchange callsigns and reports (which is
enough to claim it as an actual contact, send QSL, etc).
When you want to hear it for the entire pass, and be able to make somewhat
longer chats, you will find that the antenna is not truely omnidirectional
and the satellite traverses through all kinds of nulls during the pass.
The yagi antennes won't have that problem, at least after you have managed
to get the direction (calculated by the tracking software) to be
automatically transferred to the rotator control box(es), and thus the

antennas are always pointing in the right direction.
The polarisation of the omni is also often not optimal (i.e. not circular) and thus you will have more or less fading when the satellite tumbles. This does not mean it can't be done, but it just won't work that well. It may be enough to give you a real thrill when making your first contact, of course...

To make longer voice contacts you need a satellite that does not orbit so fast (these low-orbit satellites stay in your view for only about 15 minutes each pass, and when you want to contact someone far away the satellite has to be in his view as well, further shortening the interval).

The Phase3 satellites are in a higher orbit, and allow long-duration DX contacts. Currently only AO-10 is available, and it requires quite a station to use it (at least you need SSB equipment, transmit on 70cm and receive on 2m, plus the signal is quite weak).
The new Phase3D satellite that will be launched "real soon now" will provide about 10dB more link margin, and it should be usable with much smaller antennas.

So, things may get better in the near future.
For now, you could listen on the downlinks of satellites that provide FM repeater service (like AO-27 on 436.792 MHz) with your scanner, but don't be surprised when you hear nothing at all. Probably you will need at least a better antenna (e.g. crossed dipoles or eggbeater) with a pre-amp mounted directly at its base.

Good luck with your experiments!

Rob

I'll be sure to ask a few packeteers about the transciever to see if its got the OK for 9600 baud.

Yes, I've been watching the tracking programs for a few days, and they're what

I've been using to find when to listen, and yes I've noticed the short passing and

I now remember hearing about omni's not catching signals when the satellite is turned away.

>It seems like getting a HAM License would be the first step.

Not necessarily. It is just one of the steps, and in some countries it is a step that should be taken before a transmitter is purchased or built. In other countries it should be taken before the transmitter is actually used.

"building a ham/sat station from the ground up" is a long and complicated process that could start with collecting and setting up the equipment for listening to other amateurs rather than getting a license first.

The other responces are mostly correct. 6.0 is the first version for
KPC3 (non plus model) to have the NMEA GPS functions.
The next and last version for a KPC3 was 8.2 which added stuff for
making your KPC3 into a digipeater. The KPC3+ latest version (8.3) as
mention in a couple replys added a software serial port so the GPS
data could come in via this, instead of the DB25 serial port. All the
settings for KPC3 6.0, 8.2 and KPC3+ 8.2, 8.3 are in this page:

http://www.theworks.com/~wa6ylb/tracker.txt

There is other APRS items at the main web page at:

Just a few minutes ago, 8/22/99 at 16:16 UTC, my 2m rig broke squelch and I heard Russian-accented voices. I heard two brief transmissions, about 30 seconds apart, and then nothing more. I am in North Carolina, Grid Square FM06.

I quickly fired up WinOrbit and it showed Mir as being out over the middle of the South Atlantic Ocean.

Squelch just broke again - 16:19 UTC - and now they are speaking Russian.

Have they altered MIR's orbit? Is my WinOrbit broken? Is some strange propogation mode carrying these signals to me?

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Dec $1.00 ea.
1994 Jan - Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.

> Whatever you say Rob.

Rob makes a good point - you have to be be to hear them
before you can work them, and *anybody* can listen, ham
license or not. Hearing them is the hard part, and can
be a lot harder to get right.

If you're only listening, you can listen to any satellite
you want; not just ham satellites. The easiest satellites
to hear tend to be the low-orbit VHF weather satellites -
those puppies are loud.

As a bonus you get neat pictures...

Hello all,

Due to 70 cm output problems with my IC-821h, I'm looking for the
schematics of this rig.
ICOM doesn't supply the schematics anymore with it's
Instruction Manual deliverd with this transceiver,
they are asking about $ 50,- for the Service Manual in the Netherlands

Who can help me with a copy (also a PART of the Service Manual via
Email is O.K.), I think the problem is on the Main Unit...

Thanks in advange, 73's de Frank PE1KNL

Email: pe1knl@nospam.amsat.org

Please remove the nospam. from my Email adress to reply...

Hello Mike,

Sounds like people are trying to discourage you from the tone of some of the responses. My advice is to get a good dual band HT, I personally like the Kenwood TH-G71. They have come way down in price since the TH-D7A showed up on the scene. Add to that a high gain rubber duck antenna. With this simple setup you CAN make QSOs on AO-27. I have seen it work. From there you might want to get an Arrow II Satellite antenna with a duplexer, http://members.aol.com/arrow146/arrowii.html#m2 . You will also need software to track the satellites, I think there are web pages to do it for you too. This will get you on the satellites. Although you will just be touching the surface, you have to start somewhere. Advanced satellite work is just that, ADVANCED.

Another great radio would be the Kenwood TH-D7A. This is a sweet radio for packet, but it and an inexpensive high gain rubber duck would stretch your budget to the end. I doubt you could find a deal on a used one. It has an integral 1200/9600 baud TNC. It is really designed for APRS, Automatic Packet Reporting System. Another really fun thing to do with amateur radio. Check out http://home.earthlink.net/~wpeloqui for more APRS information. Amateurs have been receiving 9600 baud satellite packets. I don't think you can xmit to satellites with it at 9600 baud though.

As soon as I upgraded from Novice to Tech (there was not a no code tech back then) I bought a 2m HT and had a great time with it. You can use it for normal packet work (even with the NON TNC BayPac). It is the best radio for local communications.

Find a local amateur radio club and join it. You will find many people eager to help you. Sometimes it is difficult to "break into the cliq", so assert yourself and say "I am new, I want Help, This is what I want to do." Also join AMSAT, or at least read their web page, http://www.amsat.org/ , be sure to read this article http://members.aol.com/dquagliana/beginner.html .

Well have fun and hurry up and get your license!

73,

Willie

The guy was asking for some recommendations around setting up a station
suitable for 9600 bps packet satellites, on a $200-$400 budget. This
is not a realistic possibility, and I have explained why.
Now you recommend him to get a handheld and have some quick fun on a
flying FM repeater. Sure that can be done, and it probably will be
fun, but it was not what he was asking for.

Sorry if you find it discouraging, but it was not meant that way.
I have setup a satellite station myself, and I know what I am talking
about.
It is not that simple. Your simple setup "CAN make QSOs", but not on
packet satellites.

>APRS information. Amateurs have been receiving 9600 baud satellite
>packets.

"to receive some 9600 baud satellite packets" is easy. just this week
I tried again, maybe to find something that I could recommend him to
try. I connected an omni antenna to my 70cm FM transceiver, held it
up on the balcony, tried it with and without a good preamp, and sure
I received some packets during that experiment.
There were even some data packets! (most of them were UA's and RR's
of course...)

However, such a result is not usable when you want to download something
from the satellite. You should be able to copy at least 90% of everything
the satellite sends on the downlink, yielding several hundred kilobytes
(up to about a megabyte) of data during each pass, to get anything
complete.

That is not going to happen with your HT until you add an AZ/EL steerable
yagi to it. By then it was probably wiser to get a used transceiver that
does not boast 300-900 MHz tuning range, but still has some decent input
filtering left over from the old days. It will not get blown away so
quickly when it gets some strong local pager signals besides those weak
satellite signals.

Sounds to me he wants to experiment. My advice is to start small and work his way up. I understand that a serious satellite station is not something for a newbie to attempt. I just tried to swing that in a positive direction.

My wife tells me that I am very negative! I guess I am just practicing to be positive. I hope I did not offend you, as that was not my intention. Without a doubt you are much more knowledgeable in the subject than I am.

There is a satellite tracking web page that allows you track satellites which used to be great for newcomers. It is located at: http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack However, the Keplerian elements on it are over 257 days old. I tried to contact the owner, Lou Williams (KE4ARM) using all the available email addresses on the page, QRZ, Buckmaster, etc and it appears that he is no longer with us. I even sent him a QSL card to no avail. I think it's a shame that the keps are not being kept up to date. There are many links to this site from various ham pages. If anyone can help with supplying some new keps for this web site or moving it to a location where it can be maintained, many hams would be very grateful. I used to link it to my own ham page but have since removed the link since I feel that it would only create frustration for those hams trying to get their feet wet with satellites by giving them erroneous data.

Thanks,

Lee Devlin, K0LEE

I think the point is not "where to get recent keps" but "how to get them
updated in the file that this KE4ARM site uses"...

BTW, I get my keps from that same site (via the FTP access) and got bitten
by something else: an automated script fetched a predefined set of files
every 5 days, and collected them into a single file which I distribute
locally. People get this file (via packet) and merge it with their
local keps to update the various elements.

Now, the distribution of satellites over the different files in that FTP
directory changed, and the subset that I retrieved automatically did no
longer include several interesting satellites (amateur, weather).
It took some time before someone noticed that his keps were actually
not getting updated when he retrieved the file every week.

Maybe something similar has happened at KE4ARM.

(now I just "mget *" from that directory to avoid any future surprises...)

2644. Wisconsin, Oklahoma, and Ohio ATV balloon flights Aug. 28, 29

Newsgroup: rec.radio.amateur.space
Date: 1999-08-27 00:00:00 UTC
From: cw645@cleveland.Freenet.Edu
Message-ID: <7q5j0v$63r$1@alexander.INS.CWRU.Edu>
Source record: 11360

There are three amateur radio high altitude balloons scheduled to
launch this weekend, all from the midwest US.

These are all ATV equipped to transmit live pictures all along their
flights; two will have APRS packet, and one will have a crossband
repeater onboard. With the immense height these balloons achieve,
you may hear the signals as much as 300 miles distant at their
peak altitude (80-100,000 feet).

Here's a brief summary of the events. For all the pertinent
details such as HF and VHF nets, balloon frequencies, launch site
coordinates, and more .... please see the HABLIC website which always
carries balloon launch notices from the Americas and Europe.

Those without web access may request a text file.

Saturday, August 28 1200 UTC Wisconsin near Madison, WI
Saturday, August 28 1500 UTC Oklahoma/Texas Booker, TX
Sunday, August 29 1400 UTC Ohio south of Toledo, OH

Although I haven't been able to monitor today, they were supposed to
turn the ham gear off for safety reasons. We'll have to wait and
see...

There are other sats in the meantime....

Tom, all i have haerd on the news last night was that they were NOT putting another crew up on MIR and yesterday was the
last, i noticed one of the cosmo's shedding a tear when doing a final tv bit before the off.

If there are to be no more crews surely they could leave sstv/packet on ?

Now unless things changed since WF1F's last message (and with the
Russians that's always possible) another crew is SUPPOSED to go up in
February. If they find funds we *might* see another crew but I'm not
holding my breath.

>If there are to be no more crews surely they could leave sstv/packet on ?

It could be a safety issue from what I've heard. I think it's the
fact that they want to control Mir's re-entry and fear a problem with
the electrical system could cause a problem with that. I'll try to
find out more info...

Ian,

If you name yourself "eavsdropper" could you really not find any of the
many, many news articles that explained the entire situation (including the
reason for not keeping the station switched on)?

The nine o'clock TV news is not the only source of news, you know...

got this just off the alt.astromony.solar news group !
ttyl de dave-n2rhl

```
-----------------------------------
Potential | |
High Levels of | A s t r o A l e r t | 28 August 1999

Solar Activity | | 05:40 UTC
---------------- Sun-Earth Alert
----------------

A large and active sunspot complex may be gearing up to produce
possible
major solar flares over the next several days. NOAA active Regions 8673
and
8674 are the most impressive sunspot groups currently visible on the
Sun.
They are located just southwest of the central solar meridian and
consist
together of 86 sunspots. Region 8674 is the most complex and has
developed
into what is known as a beta-gamma-delta magnetic configuration (the
most
complex magnetic configuration identified). Sunspots classed as "beta"
groups
are simple bipolar regions. "Beta-gamma" sunspot groups are more complex
and
consist of an irregular mixture of magnetic polarities. The "delta"
magnetic
configuration only occurs when two closely-spaced, opposite polarity
umbrae
appear within a single penumbra. This characteristic implies that
magnetic
field gradients are high and that respectable levels of magnetic shear
may
exist around the two opposite polarity umbral spots. Sunspot regions
that
possess the "delta" configuration are the most potentially volatile and
flare-prone active regions. Some of the most powerful solar flares in
recorded history (including the rare white-light flares) have issued
forth
from complex sunspot regions containing magnetic delta configurations.

The intermediate and trailing portions of Region 8674 are the areas
```

containing the magnetic delta configurations. Magnetic analysis of the region
shows that moderate levels of magnetic shear exists along a substantial
portion of the neutral line (the line separating opposite magnetic
polarities) in the trailer spot complex. This ingredient is often (but not
always) a precursor to major solar flare activity.

Over the last 24 hours, Region 8674 has produced a minimal major M5.5
solar x-ray flare. But this event lacked significant character and does not
appear to have been associated with a coronal mass ejection. This region has
the potential to produce much larger activity, even X-class solar flares,
particularly if growth continues. Most forecast centers are anticipating

major flare activity from this sunspot group over the next 24 to 72 hours.

Amateur solar observers are encouraged to keep a close eye on this
region, particularly the intermediate and trailer spot complexes of Region
8674. There is a fair possibility a large X-class flare could be spawned by
this region with possible sympathetic activity in Region 8673 (the spot
complex just northwest of Region 8674). These two active regions are merging,
which is making it increasingly difficult to determine which region is
which.

Observers with hydrogen-alpha filters should be able to spot very
frequent point brightenings along with occasional flare activity and
associated bright or dark surges. Observers equipped with white-light filters
will probably not observe any activity (flare activity is dominantly a
chromospheric phenomenon requiring a filter capable of resolving the
hydrogen-alpha component of sunlight:). However, the development of sunspots
and evolution of existing spot groups is best observed in white-light. There
is also a very slight chance that observers may spot rare and brief
brightenings in white-light during large solar flares. These white-light

solar flares are some of the most extraordinary and powerful classes of solar
flares and should definitely be reported. They often occur within the
penumbral or umbral regions of spot complexes.

Reports of activity can be made by amateurs to our Solar Activity
Observation Network at: http://solar.uleth.ca/www/sunobs.html. Click on the

Submission link to report your observations. All observations are made publically available within 5 minutes of the posting.

As always, the standard caveat applies to solar observing: don't observe the sun directly without adequate eye protection. Telescopic observations should only be performed with solar filters designed to cover the front end of the telescope and those filters should be securely fastened so they don't accidentally fall off during observations. Do not use solar filters that

screw into the inside of eyepieces. They can crack during observations caused by excessive heat. For those without filters, use the projection technique to telescopically project the image of the Sun onto a sheet of paper or a white metal plate behind the eyepiece. Avoid keeping telescopes pointed at the Sun for extended periods during projection. Some optical components may heat

excessively if trained on the Sun for prolonged periods. This does not apply to telescopes fitted with full-apeture filters that fully cover the front end of the telescope.

As active Regions 8673 and 8674 approach the southwest solar limb in another 5 to 6 days, observers may witness periods of interesting limb activity, including loop prominence systems following flare activity, bright limb surging and mass ejections.

Observers should keep a close eye on solar x-ray activity, particularly while performing observations to correlate observations with x-ray activity, by referring to the Space Environment Centers x-ray plots at: http://www.sec.noaa.gov/rt_plots/xray_1m.cgi. For serious observers, a sophisticated software package for Windows 95/98/NT4.0/2000 is also available to aid in monitoring solar and space weather conditions at: http://solar.uleth.ca/www/swarm.html.

You try to claim that you tried to locate info, but instead this is just
the zillionth "question" that you post on this group and that indicates
a fundamental lack of prior research.
For once, try to scan some search engines before posting.

When you need a collection of recent and reasonable space news:

2659. New Satellite Tracking program

Newsgroup: rec.radio.amateur.space
Date: 1999-08-28 00:00:00 UTC
From: scott@NOSPAMnetwork23.freeserve.co.uk
Message-ID: <7q9ijnksa1@news6.svr.pol.co.uk>
Source record: 11375

Hello All,
I've been busy writing a new program that you may be interested in.

"SATSCAPE"

Its a satellite Tracking program, but instead of an old DOS-based
program, this is a highly-graphical Windows program.

It predicts where Satellites are at the moment, and when they are
due to pass over your part of the world. You don't have to use
or have access to the satellites, as it will even predict when
the 150 'Brightest' satellites pass over, so you can SEE them.

It can currently track about 500 satellites simultaniously, with
a World view, Horizon views, or a tabular list. It also has speech
to announce satellites as they come into range.

Updating the keplerlian elements couldn't be easier, just one click
from the menu, and it will connect via your internet connection,
and update them, no more download/cut/paste/inport etc. It even
informs you when they are out of date and need updating. So throw
away that old DOS prediction program, and use this.

You require:
A 800x600 screen (minimum)
An Internet connection
A sound card (to hear the speech)
Windows 95/98/NT/2000.
486 PC or better, Pentium Req.

The current release is beta, but seems very accurate and stable.
Its also FREEWARE and will stay that way. So, if you would like
to try it out, go to http://www.network23.freeserve.co.uk
then click on the link to my SOFTWARE page.

Thanks,
Scott.

The entire basis of practicality behind ham in general, less CW is mute.
Both are outdated and pretty worthless compared to a Cell Phone.
Exactly what importance would you stupid little beeps be helpful when a microphone or cell phone would be much easier to use? In case of end of world? In case of nuclear war? I mean, really, get with the 1990's and stop trying to make yourself feel more special and needed than you are.

Looks quite nice Scott, just d/loaing it now to compare accuracy with some other comercial proggys i use.

Tell you what if you ever get the inclination to do something "special" I have often tried to find a sat proggy that
lets you have a view from the satellie (looking forward) or walk around the satellite while in orbit. In other words
you can see the horizon coming up in front of you as if you were sitting "in" the sat looking out !, I have never seen a
proggy that can do that and I would imagine it would be a LOT of work to make/run one...but what a great proggy and view
that would be :-)

ian

Source record: 11382

Just run it and it so far seems smack on compared to nova and logsat,

just a couple of ideas though scott

1) ability to state which sats you want on the maps (individually rather than by the group)

2) satellite footprints beneath satellites

3) ablity to state ftp address for kep download

4) possibly orbit view in future

but thats all being fussy really I think it is very nice bit of software for a private release.

nice one Scott, look forward to seeing the full release

ian k.

2667. Help locate antenna program

Newsgroup: rec.radio.amateur.space
Date: 1999-08-29 00:00:00 UTC
From: Bill <kg8aw@ismi.net>
Message-ID: <37C93A86.81D8A05D@ismi.net>
Source record: 11383

I need help locating a computer program. The program may have originally been on one of the early 90's Buckmaster CD's. Some of you may be interested in the program and I'm hoping you know of the program. I have lost track on it and would like to find it again. The program had several functions, but the one I used and liked did the following: Start the program, tune your receiver to a signal or beacon, rotate beam antenna from stop to stop (360 deg), at end of the rotation the program would display the antenna receive pattern. As I find the receive pattern closely matches the transmit pattern in most cases, the program was very useful. They only connection from the receiver to the computer was connecting receiver audio to the soundcard. I have no idea what the name of the program was or who wrote it. Sure hope one of you knows. Please drop me a note if you can help. Thanks, Bill, KG8AW

Ian,

So what you are saying, is that if someone drops a level, then it's perfectly fine for you to do the same? Looks like you have a bit of maturing to do. Best of luck in that endeavour.

Nuff said.

Paul.

SkyChart 2000.0 (http://www.southernstars.com/SkyChart.html/) lets you see the view from an orbiting satellite. Last time I used it (while flying the Astro-SPAS shuttle deployed telescope) you could have the planetarium software focus on a spot on the sky and you'd see the Earth come into view and block the target. This was very useful for checking the mission planning tools. I don't remember if they had a "fix the view relative to the local vertical/local horizontal" mode or not...

Ham radio will not die. It's the *only* communications medium, outside
of shouting, in which any two operators anywhere in the world, can
communicate directly without using government or commercial services.
Those same two operators don't even need to purchase commercially-built
radios -- they can build them themselves.

BTW, your prediction is older than you are: In "...1922 many radio
magazines which had catered to the transmitting amateur swung away
from him, one even so far as to run an editorial ... prophesying the
end of amateur radio." (From Fifty Years of ARRL.)

Best not type words like that, if mommy and daddy find out, they will take
your computer off you.

But, since kindergarden starts in a few weeks, you probably won't have much
time to post lame stuff in here.

Paul.

Do you think this scares me Ian? If I was scared about people finding out who I am, would I be posting using a KNOWN alias? Think about that one.

you'd also be surprised how easy it is to find information on you, but I won't play your games. I'm a HAM, and have a certain code towards the hobby, and this is mainly a HAM Newsgroup. Why not let the people in here who enjoy the group, to just enjoy it.

We don't need malicious people like you posting garbage in here. If you have relevant information that can help us, then post that. Keep the SPAM for the EMail, Since you have my email address, why not move this discussion there?

Always open for a good chat.

Paul.

2676. Aisin Seiki GPS Receivers -- NEED INFO

Newsgroup: rec.radio.amateur.space
Date: 1999-08-30 00:00:00 UTC
From: n5zgt@swcp.com
Message-ID: <7qchs1$9lh$1@sloth.swcp.com>
Source record: 11392
Cross-posted to: sci.geo.satellite-nav,rec.radio.amateur.space

Hello Everybody,

I purchased two Aisin Seiki D8132-2041 GPS receiver boards for the heck of it for $50 and am looking for information about them. They came with manuals (although they say they are for the model TE2041, D8100-2041 receivers), but they just explain how to get them to work with a computer and an optional display board, etc.

A few questions:

-- These receivers are used for aiding in the navigation of cars in Japan...I did hear that they had many auto navigation GPSs fail due to the EOW rollover. I do not know if they are referring to these particular receivers. Any info?

-- I would like to find out of they are still useable after the EOW rollover. Any info?

-- I would like to somehow use these to make a few APRS (Automatic Position Reporting System, which uses NMEA type data from the GPS...for those who don't know what it stands for) trackers, and am wondering if the GPS receiver itself can be taken off from the rest of the board and manipulated to output NMEA for APRS. The format these things output is some proprietary format, and not NMEA. According to the manual, it's data format is "Draft Communication Specification for Final System Aisin Seiki Display and GPS Receiver & IVS Navigator (97/10/23)." Not much help for me. Does anybody have any ideas or info?

Any information would be appreciated, as these receivers would be neat to experiment with APRS. Please either email me or post to the NG. Thanks!

Brian

What is this??

ARRL membership canceled, and someone is free??

Hermann is a German name, it actually stems from the word Arminius, which word means a Germanian (Germ - anian) soldier.

Oh, I'm Swedish by birth... like 30% of the Finnish population. Every traffic sign in Finland is written in two languages, 1) Finnish and 2) Swedish, for this reason.

See the American jewish author Isaac Bashevitsh Singer's book Enemies, a Love Story, the main character of the book is Herman Broder... There was one time when I wondered if the author wants to say "Hermann Cain".

cheers, Antti (Andy) Ylikoski, OH2JJR (Shakespearean call)

Fun Callsigns:

Oscar Hotel Two Juliet Juliet Romeo - Shakespearean call
Oscar Hotel Two Kilo Foxtrot Bravo - Kilo Fine Business
Oscar Hotel Two Kilo Whisky - Kilowatt
Oscar Hotel Three Mike Hotel Zulu - Megahertz

Hi all, I wonder if it is possible to work satellites (and which satellites) with a handheld tribander like my Yaesu VX-5R, and if so what kind of antenna is required for each band..?

I have max 5W output on each band.

Is there maby a dual band (70cm/2m) directional antenna or is it possible to biuld one..?

I have a prog called SOAP for mac that allows satellite view. I am sure there are others out there.

The Jtrack 3D prog allows a view from space in 3D anywhere near the Earth. You can synchronize your view with a satellite so this is similar, but it does not show the footprint.
All you need is a browser that does Java. Jtrack 3D updates in real time, you can also speed it up if you like.

http://liftoff.msfc.nasa.gov/realtime/jtrack/3d/

All the choices in
http://liftoff.msfc.nasa.gov/academy/rocket_sci/satellites/
are pretty cool!

For amateur satellite users, the footprints of visibility are
virtually a must.
(This goes back to InstaTrak, and early DOS program ... I still have
it,
but unfortunately, it doesn't behave nicely in a DOS box, due to some
issue with the S3 VIRGE video chip's character mappings ... the maps
work fine, but the text is all garbled in a goofy character set.)

Since all cell phone systems (except perhaps Iridium and Inmarsat) rely
on terrestrial, ground based wire from the local telco for
interconnecting their system, they have a nasty habit of going down
during a fire, flood, hurricane, earthquake, etc. at exactly the same
time as the fixed telephone network. For now, there is still a place
for ham radio emergency service communications. After two more
satellite communications go up....things could change again. Don't
forget the value of the manpower in back of the ham radios. Would those
people be there if their communications links were all commercial sat
phones? I think many hams do the service because it utilizes their ham
radio skills, not because they are disaster junkies.

>Just run it and it so far seems smack on compared to nova and logsat,

Cool! I only compared it with STSPLUS

>1) ability to state which sats you want on the maps (individually rather than by the group)

Already on it, it will be in the next release.

>2) satellite footprints beneath satellites

Very tricky, not just the maths, but getting the programming language Im using to do it.

>3) ablity to state ftp address for kep download

Yeah I can do that, I didn't think it would be nessasary.

>4) possibly orbit view in future

Possibly.

>but thats all being fussy really I think it is very nice bit of software for a private release.
>nice one Scott, look forward to seeing the full release

Thanks Ian,

Scott.

They might behave like my Garmin 38. I had to clear all the data,
and let it rebuild its internal database. It was rather confused
before I cleared it. I am at (nearly) N38 W84 and it was reporting
the location as N42 W180. Took about an hour to restore itself.
Turned it on in "autolocate" and just left alone for a hour or so.

Some people like CW, others do not.
Some people like horseback riding, others do not.

The fundamental question is if we should require people to
demonstrate proficiency in horseback riding before they can
earn a license to drive a car.

>info?

The "programming manual" that I have shows the data format as it comes out
of the receiver module. You may have the same. The big board that the
receiver module is mounted on is not of any real value, in my opinion. I've
tapped in to the data coming straight out of the receiver module and written
a decoder program, using the programming manual for the unit. The large
board is only serving as a voltage regulator, battery holder and RS232
converter. I've abandoned the remainder of the board. The hardware
interface to the receiver module is simplicity itself... +5 volts,
+battery, TTL serial data out, TTL serial data in. (The serial data in is
not really necessary for operation.) The receiver module/antenna connector
are removable from the main board with just a few screws.
Since neither the module's output nor the main board's data format are NMEA,
either one needs to be translated to be used as a NMEA input to another
device. The serial data comes out of the receiver, gets received by the
microprocessor and re-encoded and serialized. So, why incurr the extra
serial delay that the main board's microprocessor adds?

Hope that's helpful.
Martin Ronney, WB6YMI

You should check out OrbMaster. It displays a variety of 3D perspectives that it sounds like you're interested in. You can see a display of a ground to space view, a spacecraft to ground view, a spacecraft to spacecraft view, etc. It can also read in TLE sets from the internet, output text files for later use, and it has a bunch of neat features I haven't found anywhere else. If you couldn't tell, I'm a convert. You can download the shareware version at

http://www.pond.com/~ssp

Take a look and let me know if it's what you're interested in.

2707. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-09-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7qnivi$dp9$1@news.hawaii.edu>
Source record: 11473
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an automobile accident; the future of this newsgroup is not known. 73 Bill...

You only need the GPS commands if you intend to make it a tracker.
APRS software dosen't need anything beyond a plain TNC-2 and anything you're likely to see today will work.

Welcome to APRS!

Go here for one of the best sat programs around:

http://www.dransom.com/

>2) Any tips for the rookie here? I know not to transmit until I can hear it
>but anything
> else?

Use a telescoping whip or handheld beam like the arrow. If using a
telescoping whip hold it broadside to the sat. If you can use a
pre-amp do so but it's not absolutely needed. Weekdays are easier than
weekends because of the traffic. Keep trying and don't give up!

>3) Can someone check my doppler shift compensation calculations please?
> TX RX
> 145.845 436.805
> 145.850 436.800
> 145.855 436.790

I believe the last set should be 145.855 TX and 436.785

>Thanks.

You asked me and i will give you my honest opinion.

As soon as i started it ...straight into the bin it went, what IS the point in letting people try out software when most
of the features that people would be interested in using are blocked ?. I could not even load elsets for gawds
sake...some sat tracker :-)

and another thing that annoys me more than anything in the world is a program that has NO uninstall from control panel
or in it's own start menu..any software author that does not have the decendy to include a FULL and comprehansive
uninstall on software of this size deserves nothing in my opinion if not to be hacked/cracked.

oh well just thought i would let you know....i'm off know to carry on cleaning up the mess left behind after it ;-)..

i thank you for letting me know about it...despite my opinion it may work for others, but i would be surprised ;-).

ian

You should check out OrbMaster. It has a lot of 3D views you might be
interested in. You can see a 3D perspective from ground to space,
from spacecraft to ground, from spacecraft to spacecraft, from
spacecraft to fixed direction, etc. The shareware version is at

http://www.pond.com/~ssp

Take a look and let me know what you think
Alisa

Hi
I am trying AO 27 & SO 35 on a handheld, (no luck yet)
But I use Winorbit 3.5 from http://www.sat-net.com/winorbit/
It works well for me if I keep the database up to date.
It was always very accurate with MIR passes.
Hope to hear you on the Sats.

Sunsat SO 35 is also live tomorrow and Sunday
16:18 - 16 :35 UTC Saturday 4th
17:18 - 17:34 UTC Sunday 5th
16:37 - 16:55 UTC Saturday 11th
15:58 - 16:15 UTC Sunday 12th

Uplink 145.950 Mhz (Ignore doppler)
Downlink 436.250 Mhz (+5Khz/0Khz/-5Khz for Doppler during start/middle/end of pass)

Don't worry, the repeater is on even if no one is transmitting into the bird. If the pass is very far west, this may be a concern, but the eastern passes generally have about 5 stations trying to get into the bird at once (at least!). Just listen at the appropriate time and you'll hear it if you rotate the antenna the correct way. For more info see my web page at: http://members.aol.com/lee810/ham.html

Have fun,

Why doesn't anyone think about the history of Amateur Radio and the fact that CW goes right along with that history. I have only had my ticket for not even a year and I am a 'No Code' Tech but I look foreward to learning CW and advancing my licence class. If you don't like CW then why did you get your Amateur Radio licence in the first place? CW is one of the the things that attracted me to the hobby. Maybe those that don't like CW should go to 11m and talk there and leave the Amateur bands to those that want to keep the history alive.

The way it was put to me was this. If you just start keying up before you hear signals, you may be interrupting someone else's contact ect. I am under the understanding that AO-27 is quite popular and you should be able to hear radio traffic on the down link freq as it comes in to range.

Listen before you leap as it were.

Carl,

I believe you do not have to compensate for uplink doppler so
145.85 is fine. I set my HT (ICOM W32A) for 5KHz steps at start at
436.810 and step down to 436.70 during a pass. You basically have to
"chase" the signal as the bird passes by.

I have only moderate luck getting the bird with my HT and a Premeir
AL-800 whip antenna, but have actually had QSO's with that set up.

Nobody is trying to outlaw CW. Your strawman falls flat. The
argument is about Morse code testing, not CW. If the Morse
code requirement was dropped today, you wouldn't be able to
tell the difference tomorrow.

> If you don't like CW then why did you
> get your Amateur Radio licence in the first place?

Operating is not all there is to amateur radio and CW is a small
part of operating. What is wrong with allowing others to follow
their interests just as you have? What is wrong with live and
let live? What if all someone wants to do is experiment with
HF propagation and new modes?

> CW is one of the the
> things that attracted me to the hobby.

That's great for you. Why do you want to force your personal likes
and dislikes on others? Do you want to force them to like your
favorite flavor of ice cream?

> Maybe those that don't like CW
> should go to 11m and talk there and leave the Amateur bands to those that
> want to keep the history alive.

Funny, Part 97 doesn't say anything about "keeping history alive".
As a matter of fact, they seem to have the opposite opinion - that
advancement is good.

You are perfectly free to keep history alive, teach CW classes, and
even set up your own CW museum. Is CW so undesirable that you need
coercive force from the feds?

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you
are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

My favourite satellite tracking is one called `mtrack', for Unix
(especially Linux). You can download the source from

ftp://ftp.hes.iki.fi/pub/ham/unix/satellite

It's a great program, 100% free. There's quite a lot of free ham radio
software available for linux -- see http://radio.linux.org.au for an
online database.

Howdy from Bill K7MT in Helena, Montana. Would someone please tell me how to connect to AO-16 mailbox to leave a message for VE7AHX. I am brand new at this and copied and transmitted APRS data along with gateway for APRS off LO-19 and AO-16. Since I am new at the digital birds a very brief and simple how to connect to mailbox leave a message and disconnect. I have ordered the Satellite Handbook from ARRL but its not here yet. Help Please..

Bill K7MT

2738. MIR & Stuttle Questions

Newsgroup: rec.radio.amateur.space

MIR:
I know MIR has been abandoned by it's crew. Does anyone know if the repeaters up there are still active? or were the frequencirs just to talk to the cosmonauts?

Shuttle:
When the shuttle is on orbit and they activate the amateur gear up there, can anyone just call in or is it a pre-arranged thing?

thanks,
Carl

>repeaters up there are still active? or were the frequencirs just to talk to
>the cosmonauts?

I'll leave this one up to someone who knows for sure, but I think they
shut it all off (including other electrical devices) in case something
went wrong electrically, thus causing problems with the station
maintaining its orbit.

>Shuttle:
>When the shuttle is on orbit and they activate the amateur gear up there,
>can anyone just call in or is it a pre-arranged thing?

They do have pre-arranged school contacts to give students a chance to
ask questions and experience talking to the shuttle. Other than that,
they open it up to anyone else on the ground by calling CQ during
their free time, or they leave a packet robot on to log all packet
connects -- whichever mode they are in.

Unfortunately, all 25 SAREX missions have been completed, so there
will be no more Amateur radio aboard the space shuttle, to the best of
my knowledge.

There will be no more manned Amateur Radio operation from space until
the International Space Station has been completed and manned -- years
from now.

It is not that simple. You cannot "connect to mailbox leave a message and
disconnect". These birds don't have a mailbox, they are more like an
orbiting network fileserver. You prepare your message on your computer,
including a specially formatted header that indicates for who the message
is intended. Then you send that file to the satellite using a special
program that understands the fileserver protocol. The satellite will
send the file as UI packets, and VE7AHX will need a special program
to collect the UI packets into files again, and extract your message from
it. The special programs need to implement the PFH, FTL0 and PB protocols.
With only a packet terminal program you cannot send messages via these
satellites.

This is meant to be just a short overview of the process, to get it all
running you better read a book or the instructions for one of the special
programs written for use with the satellites. (PB, PG, NETCHL, WISP, etc)

Well... it will not be difficult to try, but it will be difficult to
to connect for sure. There aren't any amateur GEO satellites, and there
won't be any in the foreseeable future.

Unless you're Jewish, there really isn't any difference. It just means that the wine was produced by a Jewish winery. Jews aren't allowed (by their religeous law) to drink wine produced by non-Jews.

2760. PB and PG for Linux Version 1.2 released

Newsgroup: rec.radio.amateur.space
Date: 1999-09-08 00:00:00 UTC
From: Bent Bagger <bentbagger@my-deja.com>
Message-ID: <7r5540no1@nnrp1.deja.com>
Source record: 11426

I have uploaded version 1.2 of PB and PG for Linux to Sunsite.unc.edu.
The file
name is pbpg-1.2.tar.gz. I have placed the file and the accompanying
lsm-file in /pub/Incoming/linux. The target directory is
/pub/linux/apps/ham.
The updated documentation is found in pb-pg.txt.

The following errors have been corrected:
- The package will compile with glibc 2
- The display of file names in the files window of PB is now
correct
- The status line of PB has been cleaned up
- The e-counter was incorrectly incremented when TLM frames was
received
- PG will now upload more than one file per invocation
- Reception of a ER_NO_SUCH_FILE_NUMBER is handled correctly by PG

The following improvements have been made:
- The downlink efficiency is now computed for all satellites
- A download request is cancelled when (if) a NO -3 message is
received
- A new parameter MAXWAIT has been inrtroduced for PG. It allows
PG
to wait a certain time before attempting to connect to the
satellite.

The following is believed to be an incorrectness:
- Sometimes PB will send requests for directory fills when it is
not
needed. This behaviour has only been observed with AO-16.

The lsm reads as follows:

Begin3
Title: PB and PG for Linux
Version: 1.2
Entered-date: 3 SEP 99

Description: PB and PG for Linux are program used for download from
and
upload to digital satellites (Pacsats) supporting the
FTL0
protocol. This software allows you to directly
communicate
with the Microsat series of satellites. It provides a
Curses (Ncurses) based user interface. It features

automatic
directory fill requests and simple, rules based file
download requests.
This version of the programs will work with kernel
revisions 2.0.24 or higher.

Receiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference.
.

Mike Boschat

Observer: Eisse Pieter Bus
Location: Ondrejov, Czech Republic (14 47' E, 49 54' N)
Frequency: 69.92 MHz
Transmitter Location: Lublin, Poland, 10 kW, distance 570 km
Antenna: Folded Dipole, geographical azimuth 72 deg (ENE),
elevation 17 degrees.
Receiver: Bearcat UBC 860XLT Scanning Radio, sensitivity: 0.5 uV
Observation method: Listening and counting in 5-minute intervals.

Uncorrected counts of all reflections on 12/13 August 1999.

Starting at UT:

18h00m 19h00m 20h00m 21h00m 22h00m 23h00m 00h00m

37 60 79 64 103 100 48

Uncorrected counts of long-duration reflections >1 second
on 12/13 August 1999.
Between brackets the total reflection-time in minutes.

Starting at UT:

18h00m 19h00m 20h00m 21h00m 22h00m 23h00m 00h00m

20(2.7) 19(1.5) 36(3.2) 31(4.1) 52(5.2) 58(11.6) 24(2.6)

Notes:
after correction for 'dead-time', 'observability function' and 'sporadics',
the maximum of the 'new filament' is calculated on August 12 at about
23h30m UT = Solar Longitude 139.82 (J2000).
It is interesting to note that the peak of long-duration reflections observed
in 1996, 1997 and 1998 around Solar Longitude 139.70 seems almost completely
vanished.

Peter Bus

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00

66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.

. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 2 hours

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. very clear Perseids activity
. apparently no influence of the solar eclipse

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)

Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km, direction south and 2) a 30 kW TV video carrier from Sicilia, Italy, distance 900 km, south. The total echo power of both transmitters is processed into same 40 Hz virtual receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor identification, another channel is used for automatic interference rejection. Sampling interval: one 4096 point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also available at http://www.qsl.net/oe8fnk this includes now also Es, FAI and fireball statistics.

The meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value, to show the reduced accuracy. Results for less than 20 min. observing time are excluded.

Counts of reflections longer than 6.5 seconds, assumed to be overdense.

Notes:
-: lost counts because of high noise level or machine failure.
```

@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
JST = UT + 9 hours

Sadao Okamoto

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna : Comet made 50MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 880 Hz voice signal (by FFTDSP) is received
by a low frequency filter (880 Hz) and fed into the D/A converter
and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

Notes:
from June onwards scaled with a non linear scaling algorithm, due to an apparent difference in receiving system performance since the last modification (to two frequency system) in February.

Ilkka Yrjola

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment,

available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

2763. Ham Radio Station For Sale

Newsgroup: rec.radio.amateur.space
Date: 1999-09-09 00:00:00 UTC
From: "Jeffery A. Purtle" <jpurtle@home.com>
Message-ID: <37D70DB4.F324A474@home.com>
Source record: 11429
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.packet,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.amateur.swap,rec.radio.scanner

Ham Radio Station For Sale:

Yaesu FT-900AT (100 Khz - 30 Mhz Receive; 1.8 - 30 Mhz Transmit)
Astron RS-35A Power Supply (13.8 Volts/35 Amps)
Yaesu Quick Release Bracket (MMB-67 I think)
Yaesu Separation Kit YSK-900
Yaesu SP-7 mobile speaker
Yaesu FIF-232C Computer Interface
Heil Proset HC-5
Headphone Mic Adapter Cable
Bencher Chrome Iambic Paddle BY-2 with Gold Contacts
Outbacker Perth mobile antenna (80 meters - 10 meters)
B & W Low Pass Filter
80 Meter Whip

AOR AR 8000 (continuous coverage from 100 Khz to 2 Ghz; 1000 Memory
Channels)
Optoelectronics Optolink Computer Interface
Cable wired for Mac
Computer Control Software for Scanner and a MacIntosh Computer

Asking $2400. But, please make an offer if interested.

Will trade for the following package:
Yeasu FT-100
Yeasu FP-1030A (power supply)
Yeasu FTS-27 (tone board)
Yeasu FC-20 (antenna tuner)
Yeasu ATAS-100 (mobile antenna)

: Is it possible to receive images from EUMETSAT??

Do you mean from the satellites or from the organisation that puts them up?
In either case the answer is yes. Look at http://www.eumetsat.de

Since FO-29 is now in digitalker mode, I am distributing this FAQ to the space groups.

Since the previous posts on working the FO29 digitalker, I have been asked several questions on how to hear the FO-29 digitalker. What follows is sort of an evolving FAQ. Feel free to distribute this document. KF4FDJ - September 10, 1999

The Japanese satellite, Fuji Oscar 29 (JAS-2), was launched on August 17, 1996, by H-II rocket No.4, along with the earth observation platform satellite ADEOS, from Tanegashima Space Center of NASDA (National Space Development Agency of Japan).

FO-29 is a small LEO (Low Earth Orbit), Japanese owned satellite containing a digitalker, mode JA transponder, and 1200/9600 baud packet capabilities. The mode JA transponder requires a SSB, or CW uplink signal on 2 meters, and transmits a downlink SSB/CW signal on 70 centimeters. Mode JA is a full duplex mode. You WILL hear your own downlink, which is crucial, in order to compensate for doppler. The satellite is also capable of mode JD, (digital) at 1200/9600 baud.

Q Is Fuji Oscar 29 always in digitalker mode, and what is it?
A The digitalker on FO-29 is a digital loop announcement, which makes the same announcement over and over. You will hear, "Ho- ho'kke'kyo, this is JAS two." The first part is the song of a bush warbler. JARL (Japanese Amateur Radio League), plans to cycle digitalker, mode JA, and mode JD. The digitalker message is subject to change. Check announcements on the BB for a mode schedule and other details.

Q Do I need a multimode rig to hear the digitalker?
A Since FO-29 transmits in FM mode while in digitalker, any FM or multimode receiver capable of tuning the 70 cm ham band should be able to detect the signal.

Q Do I have to use a high gain antenna to hear the signal?
A Digitalker operation dedicates most of the power budget of the satellite to the FM transmitter, instead of spreading it across a mode JA transponder. It is a very strong signal! It is possible to hear the satellite with a handheld scanner or transceiver, and a stock "rubber ducky" antenna. Most 70 cm base stations, or scanner listening posts, with fixed antennas, should also be able to tune the signal.

Q I've heard that a circularly polarized antenna is necessary to hear FO-29. Is this true?
A While a circularly polarized antenna will help on mode JA, it is

not necessary with the digitalker. It REALLY is possible to copy the signal with a handheld device and a "rubber duck" antenna. We have been successful with a Yaesu FT-50R and a stock antenna. You will need to rotate the rig (and antenna) for the best orientation. Experience shows that horizontal polarization, with the axis of the antenna perpendicular to the satellite gives the best reception. Experiment!

Q Where do I tune to hear the signal?
A The transmit frequency is 435.910. Of course, you will have to compensate for doppler shift. Just remember you will tune a little higher in frequency as the satellite approaches your position, and a little lower in frequency as it recedes. You will always be tuning higher in frequency when the satellite comes over the horizon. Make sure you have your radio set to tune small increments, as increases and decreases in doppler are gradual, and linear.

Q How long will I be able to hear the satellite during each pass?
A Since FO-29 is a low earth orbit satellite, most passes will be between 6 and 18 minutes in duration. Timing is critical in working any amateur satellite.

Q What is the purpose of the digitalker?
A The digitalker presents an easy opportunity for hams and non hams to have their first taste of real time reception of signals from space. Use this opportunity to show a kid, or a terrestrial ham how easy it can be to tune a satellite. This opportunity is excellent for scout meetings, monthly ham meetings, schools, or any place where nquisitive persons congregate.

Q How will I know when the satellite is over my location?
A You will need a program to generate predictions of when the satellite is "visible" to you. An excellent place to find downloadable software for real time tracking of satellites, and other information on the amateur satellite program in general, is:

http://www.amsat.org

Be sure to download the latest keplerian coordinates if you download a tracking program. Each prediction program needs these coordinates to determine where the satellites are, and to help you determine when FO-29 will be over your horizon. Another casual approach, is to use an online prediction site, such as:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

This site will generate pass predictions for a selected satellite.

If you have any comments, additions, or modifications to this document, please contact me directly. We will attempt to post the latest version whenever the satellite is toggled to digitalker mode.

73, Mike KF4FDJ

2766. HELP STOPPINGTHE GENOCIDE IN EAST TIMOR !!!

Newsgroup: rec.radio.amateur.space
Date: 1999-09-10 00:00:00 UTC
From: ajmarc <ajmarc@mail.telepac.pt>
Message-ID: <7rbedt$488$56@duke.telepac.pt>
Source record: 11432

PETITION

Widespread death and destruction are happening in East Timor with no respect whatsoever for human rights. Even animals are not treated in such a way. At least not in the civilized world !
The world has already seen how little a human life means to an indonesian, and how much cowards and liers the indonesians are, killing innocent unarmed people !

Unless world leaders exert maximum pressure on the Indonesian
Government the results of last Monday's referendum will be followed by
a growing massacre and destruction of thousands of citizens and their entire families who braved
everything to vote, expressing overwhelmingly their wish to become
independent.

Regrettably, the Indonesian Government is not fullfiling the New York agreements nor any others and has allowed the violence to spread.

An international force is ESSENTIAL to prevent the total slaughter of the people by the anti-independence militias.

Therefore,
I call upon you to URGENTLY exert all of the available means at your disposal to make the killings stop and prevent the deportation and massacre of the people of East Timor.

======

Each minute that passes, hundreds of timorees are slaugtered or deported by the indonesians.
In the referendum promoted by the United Nations 80 % of East Timor people voted for
Independence. Since then thousands of people have been killed
JUST FOR THEIR VOTE . Almost all international journalists have been forced to leave East Timor (only four rested) .

United Nations are LEAVING East Timor on 1999-09-10 07h00
(Pacific time) , leaving the East Timor people ALONE, against those who are KILLING them.

In 3 days more than 300.000 people have been forced to move.
Indonesian policies and militaries have not been able to keep peace and have no conditions to maitain peace in East Timor.

United Nations MUST send a Peace Keeping Force to East Timor.

PLEASE, HELP EAST TIMOR, at this moment, they are being MURDERED.

Please send this petition, or write your onw, to:

Bill Clinton - president@whitehouse.gov
Al Gore - vice.president@whitehouse.gov
Hilary Clinton - first.lady@whitehouse.gov
Habibie - habibie@risknet.go.id
Kofi Anan - ecu@un.org
Mary Robinson (UN) - webadmin.hchr@unorg.ch
Angela King (UN) - daw@undp.org

Not likely, there are plenty of ham sats up there.

I think Mir was pretty much the Main event in here. I'm disapointed that she's pretty much a goner now. I have enjoyed Listening and contacting the station many times.

I think a lot of people in here share the same thoughts. But Mir is old, and outdated, and costing our Russian friends a whole whack of cash to keep a crippled station alive.

Guess we will all have to wait a few years until the HAM Station on board the ISS goes online.

Mir was a perfect ham station, you didn't need expensive hardware or skill to contact it, Just a license and the right gear, and you could hear it with a simple handheld or scanner. The two others that come to mind like Mir were DOVE (DO-17, which I understand now is still silent) and that russian bird, that came up earlier on in the year, I can't remember the exact name, but it WAS a Sputnik.

Most people don't have to resources and cash to build a fully operational Sat station, I know I don't. Not to mention that I live in an apartment, and how would I explain an AZ/EL Rotor on the balcony. That is why Mir had so much appeal. And probably why the conversation has dropped since her Death.

Paul.

2771. 70cm Mast Head Amp Problem - recommendation

Newsgroup: rec.radio.amateur.space

Source record: 11437

I am using an ICOM mast head preamp with my IC471H (on 70cm). Unfortunately my 2m signal gets in to the 70cm pre-amp and de-senses it. Any suggestions on a better pre-amp less prone to this problem?

Thanks

Paul

>Nice to hear from you again paul,

I quite agree with what you said , Mir gave me my first experience of "space comms" and has provided me with some great
opportunities to show others the hobby (albeit with a few errors from time to time).

Can't wait until the ISS is up and running for a new era in this hobby, it would be nice to think that one day we could
have things like a permanent sstv station etc, but all in good time i guess !

well...here's to waiting :-)

regards

Same here, but she lived FAR longer than originally planned.

>I think a lot of people in here share the same thoughts. But Mir is old,

Agreed.

>Guess we will all have to wait a few years until the HAM Station on board

Yup, should be fun if all goes well!

>Mir was a perfect ham station, you didn't need expensive hardware or skill

Ahhhh, I miss Dove. I miss hearing the brapping of her telemetry
and decoding it. Really a shame. Hope someone puts up another one.

>Most people don't have to resources and cash to build a fully operational

Eventually I'll get together a better sat station. I can do it now
but logically I can't spend the money on it at present. I will be
buying an all mode 2m/70cm rig, probably the IC-821H in the next 6
months or so.

Mir's appeal (one of them) was it was very easy to work by any ham and
easy to listen to for the non-hams. I'll miss Mir a lot. But won't
forget her.

Je me demande pourquoi les films de science-fiction nous pr�sentent si souvent une image n�gative des �ventuels extra-terrestres. Ils sont toujours tr�s laids, comme dans "Alien", ou bien dans "les Martiens attaquent" de Georges Well. Ceux de "X-files" avec leurs yeux globuleux ne brillent pas non plus par leur sex-appeal...Quant aux films de "stars war", on voit bien que s'ils nous montrent une infinie vari�t� de races extraterrestres, ils sont tous plus moches les uns que les autres, avec une exception toutefois pour les robots blancs des gardes imp�riaux.
Dans "V", ils nous ressemblent, mais voil� que ce n'est qu'une apparence et sous les scaphandres � notre image se cachent d'affreux reptiles.

Evidemment leurs intentions � notre �gard sont autant que je puisse en juger presque toujours des plus effrayantes. En d�finitive, on pourrait presque r�sumer en disant qu'ils ne songent jamais qu'� nous entreposer dans leur garde-mangers pour mieux ensuite nous d�vorer. "Alien" est � cet �gard des plus �vocateurs. Quant � "X-files", on y sugg�re carr�ment la possibilit� pour que les petits hommes verts nous traitent comme des cobayes. Dans "independance day" comme dans "V", le pacifisme n'est jamais qu'une fa�ade. Malheur � ceux qui se laissent abuser, car ils sont les premiers mang�s.

Quelqu'un conna�t-il un film de science-fiction, o� les extra-terrestres soient non seulement plus intelligents que nous, mais plus beaux, et o� de surcro�t leurs intentions � notre �gard soient r�ellement pacifiques voire aimantes? Je pense � un film o� la rencontre avec les extra-terrestres se serait effectivement bien pass�e, o� elle aurait effectivement d�bouch� sur une collaboration fructueuse entre les civilisations mises en pr�sence, avec � la clef des progr�s r�els pour la n�tre. J'aimerais conna�tre le titre de ce film.

tns for the notes about fo29

ao 27 is also easy to work, just came in from listening to a pass by it, worked one guy but satellite is very busy, lots of activity

using HT FT-50 with either a short whip or arrow satellite antenna, made contacts with both antennas

i was trying out my grandfathers Magellan gps300 yesterday and it was appaling, it took a long time to get three sats
let alone any more then when I had setup all the normal stuff i waited another 20 mins before it would give me bearing
and speed. It would not give me any other info than that andf when i moved the readout did not change at all...not
having my own gps yet i do not know if this is the sort or performance of most gps hand helds ?, is it ?.

If it is then the gps system really is not worth anything !.

I was in a clear location by the way on an island off the caost of south west UK. so there should be no reason for the
terrible performance based on line of sight.

Has anybody else had this terrible performance from a Magellan ?.

thanks

2779. WISP configuration for PACSAT reception on a TH-D7

Newsgroup: rec.radio.amateur.space
Date: 1999-09-11 00:00:00 UTC
From: Daniel Lavoie <LavoiedNOSPAM@iSTAR.ca>
Message-ID: <SOEC3.531$4z6.23576@cac1.rdr.news.psi.ca>
Source record: 11445

Now that I'm a proud owner of a TH-D7, I would like to listen to the PACSAT satellites K0-25 and UO-22 (and any other digital satellites that I can receive with a TH-D7). As somebody suggested earlier, I got WISP32 and installed it for the first time.

I don't understand this program very well, so I desperately need some instructions on how to configure WISP for KO-25 and UO-22. I tried to enter the information for KO-25 but when it asked for my TNC model there wasn't an entry for TASCO.

With WinOrbit I was able to track KO-25 but I didn't ear anything as it went overhead. What does 9600bps packets sound like? Actually, my squelch didn't even open. Since there are no 9600 packet bbs around here, I can't test my D7 to see if it's even able to copy 9600bps.

I would appreciate any help.

Thanks

Daniel

9k6 packets sound like noise. It takes some experience to differentiate
between the open-squelch noise and the 9k6 noise (which sounds somewhat
"lighter").
However, it should open the squelch. When it doesn't, your signal is not
strong enough. What kind of antenna are you using?

Ian,

I have a Garmin 12XL, as Tom does, it's a Fantastic Unit. I've had NO PROBLEMS at all. I had a Magellan for about 1 day and took the peice of trash back to the store, it was not user friendly, the lock time was brutal, and overall it was poorly laid out.

I would reccomend going with a Garmin. I've had my 12XL for a couple of years, and it still works like the day I got it. It's very easy to use, laid out very well, and gives you all the info you need.

As tom suggested, Joe Mehaffey is a GURU when it comes to GPS, there is a LOT of useful info at his site. And the SCI.GEO.SATELLITE-NAV newsgroup is worth it's weight in Gold for answering GPS questions.

Best of luck with yours.

Paul.

Hi Paul,
The solution is two part. First, make sure you're using double sheilded
coax like Beldon 9913.
Second, place a bandpass filter in front of the pre-amp. You can make a
fairly effective bandpass
filter using a coax stub. There is a more complicated filter design on the
AMSAT webpage, look for the
title 'A Mode J Desense Filter'.
Good Luck
Steve AI7W

2783. [Fwd: Listen to the easiest amateur satellite! (FO29)]

Newsgroup: rec.radio.amateur.space
Date: 1999-09-12 00:00:00 UTC
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>
Message-ID: <37DC1B6D.151063F@gate.net>
Source record: 11302
Cross-posted to: rec.radio.amateur.space,rec.radio.scanner

Since FO-29 is now in digitalker mode, I am distributing this FAQ to the space groups.

Since the previous posts on working the FO29 digitalker, I have been asked several questions on how to hear the FO-29 digitalker. What follows is sort of an evolving FAQ. Feel free to distribute this document. KF4FDJ - September 10, 1999

The Japanese satellite, Fuji Oscar 29 (JAS-2), was launched on August 17, 1996, by H-II rocket No.4, along with the earth observation platform satellite ADEOS, from Tanegashima Space Center of NASDA (National Space Development Agency of Japan).

FO-29 is a small LEO (Low Earth Orbit), Japanese owned satellite containing a digitalker, mode JA transponder, and 1200/9600 baud packet capabilities. The mode JA transponder requires a SSB, or CW uplink signal on 2 meters, and transmits a downlink SSB/CW signal on 70 centimeters. Mode JA is a full duplex mode. You WILL hear your own downlink, which is crucial, in order to compensate for doppler. The satellite is also capable of mode JD, (digital) at 1200/9600 baud.

Q Is Fuji Oscar 29 always in digitalker mode, and what is it?
A The digitalker on FO-29 is a digital loop announcement, which makes the same announcement over and over. You will hear, "Ho- ho'kke'kyo, this is JAS two." The first part is the song of a bush warbler. JARL (Japanese Amateur Radio League), plans to cycle digitalker, mode JA, and mode JD. The digitalker message is subject to change. Check announcements on the BB for a mode schedule and other details.

Q Do I need a multimode rig to hear the digitalker?
A Since FO-29 transmits in FM mode while in digitalker, any FM or multimode receiver capable of tuning the 70 cm ham band should be able to detect the signal.

Q Do I have to use a high gain antenna to hear the signal?
A Digitalker operation dedicates most of the power budget of the satellite to the FM transmitter, instead of spreading it across a mode JA transponder. It is a very strong signal! It is possible to hear the satellite with a handheld scanner or transceiver, and a stock "rubber ducky" antenna. Most 70 cm base stations, or scanner listening posts, with fixed antennas, should also be able to tune the signal.

Q I've heard that a circularly polarized antenna is necessary to hear FO-29. Is this true?
A While a circularly polarized antenna will help on mode JA, it is

not necessary with the digitalker. It REALLY is possible to copy the signal with a handheld device and a "rubber duck" antenna. We have been successful with a Yaesu FT-50R and a stock antenna. You will need to rotate the rig (and antenna) for the best orientation. Experience shows that horizontal polarization, with the axis of the antenna perpendicular to the satellite gives the best reception. Experiment!

Q Where do I tune to hear the signal?
A The transmit frequency is 435.910. Of course, you will have to compensate for doppler shift. Just remember you will tune a little higher in frequency as the satellite approaches your position, and a little lower in frequency as it recedes. You will always be tuning higher in frequency when the satellite comes over the horizon. Make sure you have your radio set to tune small increments, as increases and decreases in doppler are gradual, and linear.

Q How long will I be able to hear the satellite during each pass?
A Since FO-29 is a low earth orbit satellite, most passes will be between 6 and 18 minutes in duration. Timing is critical in working any amateur satellite.

Q What is the purpose of the digitalker?
A The digitalker presents an easy opportunity for hams and non hams to have their first taste of real time reception of signals from space. Use this opportunity to show a kid, or a terrestrial ham how easy it can be to tune a satellite. This opportunity is excellent for scout meetings, monthly ham meetings, schools, or any place where nquisitive persons congregate.

Q How will I know when the satellite is over my location?
A You will need a program to generate predictions of when the satellite is "visible" to you. An excellent place to find downloadable software for real time tracking of satellites, and other information on the amateur satellite program in general, is:

http://www.amsat.org

Be sure to download the latest keplerian coordinates if you download a tracking program. Each prediction program needs these coordinates to determine where the satellites are, and to help you determine when FO-29 will be over your horizon. Another casual approach, is to use an online prediction site, such as:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

This site will generate pass predictions for a selected satellite.

If you have any comments, additions, or modifications to this document, please contact me directly. We will attempt to post the latest version whenever the satellite is toggled to digitalker mode.

73, Mike KF4FDJ

Hi Ian,
Nope. Go here for TONS of GPS information:

http://joe.mehaffey.com/

>If it is then the gps system really is not worth anything !.

The system is awesome and works like a charm. I have a Garmin GPS
12XL.

>I was in a clear location by the way on an island off the caost of south west UK. so there should be no
> reason for the terrible performance based on line of sight.

>Has anybody else had this terrible performance from a Magellan ?.

Check Magellan's web site for rollover info. Your unit should of been
o.k. during the end of week rollover.

http://www.magellangps.com/

Go here for their FAQ:

http://www.magellangps.com/frames/frame5.htm

Check out the GPS newsgroup (it's FANTASTIC!):

Must be a flaw or disgn charactoristic of the Magellan.
I used a Trimble to survey some satellite dish sites, and it worked great.
My father uses a Garmin 38 to log his "secret" fishing sites. Since it
was very hot here, and the fish were not biting, I had it over the EOW
and while it was lost afterwards, I cleared the memory and forced it to
re-init and it works great.
I have just traded for a an old Tripmate and even though it is not great,
even it aquires a lock in less than 5 minutes from a cold start.
Try another GPS before writting off the whole technology.

I'm using an Arrow Satellite antenna out of a 9th floor apartment facing south. I checked AO-27 this weekend and I was very disappointed with the arrow antenna since it didn't bring in the signal as much as I was expecting. There were many deep nulls but I was able to copy almost to LOS. I found it required a fairly accurate pointing.

I still haven't been able to hear any 9600 bps satellites but I wasn't around during the overhead passes. What do you think of a 1/4 wave omni-directional antenna or would a 1/2 wave be better? What's the recommended omni-directional antenna for digital satellite? Do you guys use pre-amps?

Thanks

Daniel

Daniel,

Neither a 1/4 or 1/2 wave will be any good for the 9k6 satellites.

At last years AMSAT-NA meeting, Bob Bruninga was successfully copying the 9k6 downlinks using his TH-D7 and a hand held 3 element yagi.

Steve Bible installed WiSP for him on a Toshiba Libretto. You will need to setup Wisp for receive only.

The TH-D7 needs to be setup for packet mode, 9600 and KISS.

An omni is not going to work for 9600 bps satellites. At least that is my
experience, and I have not seen proof from people that have gotten it
working.

Ok, you may receive a couple of packets during a pass, but to actually
get something downloaded you need to receive 90-95% of all the packets
the satellite sends (including the 256-byte ones). That requires a
steady, reasonably strong signal. Most FM transceivers will at least
indicate S5 or S7 on their badly-calibrated "S-meter" with that signal.
(of course you don't need a signal that is *really* S7 to demodulate 9600)

You need a yagi that tracks the satellite in azimuth and elevation, and
preferably a pre-amp as well.

Rob

Hallo Steve

The program for this weekend is on the web at http://sunsat.ee.sun.ac.za
We know that the past weekend's pass did not give great coverage on the West coast. The schedule for the next 4 weekends was worked out to give everyone at least one chance to work the 'bird'.

You may have to set the GPS up before using it if it hasn't been used for a while or has been moved to a distant location
since last used. The Garmin has an autolocate feature and a manual feature where you set the current location to speed the
process. The Garmin 12XL autolocates in a few minutes, although it did seem a bit more sluggish after the rollover when I
first tried it.

My 12XL showed no difficulties, worked as it usually does.

Thomas Talley <talleyt@msn.com> wrote:
>Has there been thought of IP Multicast via an amateur satellite?

The amateur satellites don't use IP. They have devised their own
set of protocols (because they wanted to keep headers as short as
possible within the packets limited to 256 bytes by AX.25).

These protocols heavily rely on the multicasting nature of satellite
downlinks.

Rob, I believe he knows that the hamsat aren't using IP. He asked if anyone has given any thought to using it. (Maybe a on Microwave downlink and *not* using AX25?)

To do what? The current AX.25/FTL0 protocols work very well,
but if you can make them work better, many (inlcuding yours
truly) would be delighted to hear about it.

Forget it..

Why waste energy and resources for no real tangible gain.

They are already have more than enough victims and have processed currently available data at least 2.5 times.

I.E. Results received(2.45E+07) == Work units generated (9.5E+06) * 2.57

^^^^

See: http://setiathome.ssl.berkeley.edu/graphs.html

Until they get their act together, forget it..

Hmmm well -- here are some similar quotes:
Everything that can be invented - has been (Guy in the patent office a
while back)

Man will never reach the moon (A quote by an expert in this century)

Columbus will sail off the end of the earth - some thinking of the day!

And it may be a tangible loss rather than a gain!! Ask the Tahitians!

Nothing ventured - nothing gained, sez I.

If you like processing the exact SAME data over 2.5 times then go ahead and join.
You're not going to find ET any faster.

I would prefer that any processing that I contribute to actually have some usefulness.

Instead, I'll make my contribution to preserving the environment from excess greenhouse gas generation.

I run 'RAIN' (cpu idle program for win 95), with screen saver(5 min Ssave, 6 min low power), and save enough
energy to light a several 60watt light bulbs.

I think SETI@home will find definitive evidence of E.T. life. It has too. How long will those kids keep using their Space Ranger Secret decoding Rings if they don't get a real message?
I think the real purpose of Seti@home is not to find ET but to raise public interest and support for increased government funding of the project. That's how they can get the really big bucks. Some sort of "results" are going to be required to maintain interest.
NASA may have pulled the same ploy by announcing the findings of "life on mars".
Nobody wants their tax dollars spent on Geology but little green men are a different story. There are a lot more people reading the National Enquirer than the Astrophysical Journal.

SETI is no longer government-funded; it is entirely privately funded.

> NASA may have pulled the same ploy by announcing the findings of "life
> on mars".

It was only a report of a possibility of evidence pointing towards life.
The newspapers called it life. Unfortunately, it wasn't big news and so
wasn't reported in the papers, when it was confirmed to not be evidence of
life.

Best Regards,

2816. How About NO Electric Bills?

Newsgroup: rec.radio.amateur.space
Date: 1999-09-18 00:00:00 UTC
From: ashrugged@earthenergy.COM
Message-ID: <419.436423.21453102ashrugged@earthenergy.com>
Source record: 11332

Tired of High Electric Bills...How about NO electric bills?

****
This message can be viewed at http://www.earthenergy.com
See end of message to be removed from our list.
****
This Machine May give you FREE Electricity For the Rest Of Your Life...
visit http://www.earthenergy.com

You Are Invited To Attend One Of the FREE MEETINGS Across the U.S. ...
You are invited to attend one of the FREE MEETINGS across the United States on
our
upcoming national tour. Our Research company, Better World Technology, Inc.,
has
discovered a revolutionary way to make free electricity by capitalizing upon the
Fourth
Law of Motion (but there are only three Laws of Motion, you say...) to utilize energy
previously thrown away. In this way, twice as much power can be harnessed as
has been
realized by modern-day scientists. You will see (and measure) this new
technology called
"Counter Rotation" demonstrated and tested in operation ...LIVE! We will also
demonstrate the
incredible power of permanent magnet motors that generate far more energy than
was thought
possible by conventional wisdom. This is not a science class, so we will not be
teaching people
how to build them, but we will be testing the output in comparison to the input, and
you will be
shocked to see electric motors that are way over 200% efficient. Put it together and
what have
you got? ...FREE ELECTRICITY! IMPOSSIBLE? YOU WILL NOT LONGER THINK
SO AFTER ATTENDING ONE OF OUR DEMONSTRATIONS! Remember, less
than 100
years ago scientists, while eating goose, duck or pheasant, wer flatly stating that
heavier than air
flight was IMPOSSIBLE. (Evidently they thought geese were lighter than air!) The
truth was
alwasy there for them to see.

See Incredible Demonstration of Revolutionary Technologies...
We will prove you can burn water by making H2O gas our of it, and how it could be
used to
power your car. We ill actually run an internal combustion engine on the stage with
water. We

will show you a one horsepower electric motor that runs on a 9 volt flashlight battery. There's
also the Y2K lamp that does not go out all night long in a power failure. We will show you a
lamp that will burn forever, anywhere, but that isn't plugged into any electrical outlet or
conventional power source. We'll show you a magnet that is attracted to aluminum and copper.
We will also show you that live electricity can be harmlessly transferred through the air to the
other side of the room (or many miles away) without any wires at all! You will witness
amazing discoveries that will bring out the TRUTH about REAL science and how much of
it is being suppressed by Big Business trying to protect their markets and keep them status
quo.
Sign Up For A Free Electricity Machine For Your Own Home!...
Imagine never paying another electric bill as long as you live! It is true. You will be able to sign
up for a cooperative program that could make that happen. All it will cost you is a one time
contribution to the program of $275 to sign up to possibly get a free electricity machine installed
on your home that will give you up to 15 kilowatts per hour absolutely free of any costs for as
long as we can sell excess electricity to the power companies. The average all-electric home
uses an average of only 2 kilowatts per hour. You cannot lose more than a $75 registration fee,
because $200 is held by a third party fiduciary until we deliver the hardware. We will explain
the entire program after we prove with live demonstrations that we have the technology. You
will be offered the chance to NEVER PAY ANOTHER ELECTRIC BILL AGAIN....EVER!

Come to America's "Declaration Of Energy Independence" at a show nearest you. Bring
your own test meters and measure the devices for yourself! Do not let skepticism keep you from
having the most enLIGHTening experience of you life, and witness on of the greatest scientific
breakthroughs of the 20th century! You will be invited to join the "unhooked" generation and
sign up to get free electricity for the rest of your life! You absolutely cannot afford to miss the
FREE seminar! If you just cannot make any of the dates, or you don't want to wait, you can see
it on video. We will send all inquiries an information kit and a two week "Free Look"

of the
seminar on video. You do not have to buy it , but we will want it back in two weeks. If the kit is
not returned, you will forfeit a security deposit of $50 and then you can keep the kit. It consists
of a book written by Dennis Lee, a video of the show, audiocassette, CD-ROM, color catalogue
of products and other written materials. To order it, call us at 800-628-5233 or write EarthEnergy, P.O. Box 631126, Houston, Texas 77263...or visit our website at http://www.earthenergy.com. GET MART AND GET FREE!

All Shows Start At 7PM. Show list follows.

Question that maybe someone can answer for me:

What was the fate of Sputnik IV, I now it orbited for nearly
two years. Then what ? Crashed to the earth ? Spiraled
out to the great beyond ?

Thanks !

Satellites don't spiral out unless they are constantly propelled.
Without propulsion (which they normally don't have) can only
"spiral in" towards the earth.

How fast that happens depends on the height of the orbit: below a
certain height the drag of the upper atmosphere will let them come
down pretty quickly, above that height the orbit decays only very
slowly.

When the satellite comes down it will burn up in the atmosphere, unless
it has very massive parts that survive that. Only those heavy parts
will crash into the earth (or more likely: into an ocean).

I have no details about Sputnik IV. Most likely it has burned up
or is still in orbit (when that orbit was sufficiently high).

2820. FS: QST BACK ISSUES $1.00

Newsgroup: rec.radio.amateur.space
Date: 1999-09-18 00:00:00 UTC
From: Andrew <xandrew@tropicom.net>
Message-ID: <37E3D16F.62E6AEED@tropicom.net>
Source record: 11336
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.space

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you
are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea. (May issue is missing page 73)
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

There was no Sputnik IV.

The original Sputnik series flew in 1957/1958.

Sputnik 1 the sphere with antennas (85 kg)
Sputnik 2 with Laika (500 kg)
Sputnik 3 the geophysical observatory (1300 kg)

There was a Korabl Sputnik (1-5) series in 1960/1961, which were
Vostok prototypes (4500 kg). Korabl Sputnik 4 was up just one day.

Source record: 11338

I guess I'm looking to see what happened to Sputnik 3 then.

The quote here is from a web page : "The last Sputnik
installment was intended to be a space laboratory for study
of Earth's magnetic field and
radiation belt. After its launch on May 15, 1958, it
remained in orbit for nearly two years."....then what ?

Earlier in the page it states that the Sputnik program was
made up of four sattelites, they mention the first two, then
say "The last....", I assumed it was number four.

So, what do we figure happened ?

Thanks,

Paul

Yes I do know the current protocol usage. Although we (amateur's) are using
IP over AX.25 on earth.

I was just wondering.... commercial satellite systems are using IP Multicast
as a broadcast method (connectionless IP). Could be used for telemetry,
images, etc.

Anyway... as I said, I was just wondering.

Yes, this is definitely Sputnik 3 (the geophysical observatory), which decayed on April 6, 1960. Since the original orbit was 226 km by 1881 km (inclination 65 degrees), due to the low perigee, the drag put the perigee lower and lower and apparently decayed when the perigee had dropped below about 150 km. Due to the relatively light construction, it apparently burned up completely, without anything hitting the ground.

Why would you need such a program? Any graphics program (heck, even
many word processing programs) would have enough desktop publishing
capabilities to handle a simple QSL card.

Of course, I use a Macintosh. Perhaps such simple things are more
difficult on a PC. (flame suit on)

Since it was in a rather low orbit, atmospheric drag will have reduced its velocity, thereby lowering the height. It will have re-entered the denser parts of the atmosphere after the time mentioned in the report, and most probably, it will have burned up by the heat because it had no heat shield. Only parts of very large objects (like space stations) will fall to the ground (that's why they control their re-entry and direct them towards the open sea).

I think the idea behind SETI@home is more of a pooling of resources. Using the processing power of the worlds computers to crunch numbers that, up until now, have been uncrunchable in our life-time simply speeds the process to it's final goal. Are the numbers crunched more that once using the same algorithm or search patterns? This does seem like a waste if so. If they are being analyzed from different angles and perspectives I don't have a problem with that. Until the data is analyzed at least once we are unable to step back and develop new and inventive ways to search for what we are looking for instead of just plodding along with an endless amount of work in front of us.

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

Hello,

WB8RCR has recently posted a new version of his program, 'QSL Maker' - check it out at http://hfradio.org/wb8rcr/

This is a Windows 95 program, It will not work under Win 3.1. The program has also been used on Windows 98 and Windows NT Workstation 4.0.

- When you first bring up the program, you are shown a dummy QSL design.

- Simply enter your call and address and you have a useable, if somewhat dull, QSL.

- Your call, name and address are remembered for future launches.

- You can adjust the position, color, and font for all the elements of the card.

- You can use a Windows bitmap as a background for your card.

- Once you have the design you like, you can save it for future use. In fact, you can save any number of designs for special purposes, events, etc.

- There are 2, free-form lines for your QRP-L #, FISTS #, 10-10 #, grid square, awards, etc.

- The info block can be removed for those who would like to write this information on the back.

- Dockable toolbars, put them where you want.

- There is a full-blown installation program, and complete deinstall.

- There is extensive help.

- If you use custom colors, they are remembered across launches.

Again, this is software by WB8RCR. Come check it out.

Source record: 11101

After months on RS-12/13 I made my first QSO thru FO-20 over the weekend (thanks to K0BLT for his patience). Its amazing how strong the downlink signals are and how easy they are to receive. I have only a 35 cm long dipole with a Hamtronics recieving converter mounted up on the mast. (Cost me a total of $55).

This bird works great but there are not that many operators on it. Its passes over the US right now are almost twice the altitude of RS13, with a much larger footprint. It has a 100 KHz wide passband so if more operators got on it there would still be less QRM than RS13. Give it a try.

QSL Maker does not make QSL cards. It extracts data from logging
programs -- date, time, and freq of contact; call of station contacted;
etc -- and prints that data onto labels, which you then stick onto QSL
cards.

This Machine May give you FREE Electricity For the Rest Of Your Life...
visit http://www.earthenergy.com to see picture

You Are Invited To Attend One Of the FREE MEETINGS Across the U.S. ...
You are invited to attend one of the FREE MEETINGS across the United States on
our
upcoming national tour. Our Research company, Better World Technology, Inc.,
has
discovered a revolutionary way to make free electricity by capitalizing upon the
Fourth
Law of Motion (but there are only three Laws of Motion, you say...) to utilize energy
previously thrown away. In this way, twice as much power can be harnessed as
has been
realized by modern-day scientists. You will see (and measure) this new
technology called
"Counter Rotation" demonstrated and tested in operation ...LIVE! We will also
demonstrate the
incredible power of permanent magnet motors that generate far more energy than
was thought
possible by conventional wisdom. This is not a science class, so we will not be
teaching people
how to build them, but we will be testing the output in comparison to the input, and
you will be
shocked to see electric motors that are way over 200% efficient. Put it together and
what have
you got? ...FREE ELECTRICITY! IMPOSSIBLE? YOU WILL NO LONGER THINK
SO AFTER ATTENDING ONE OF OUR DEMONSTRATIONS! Remember, less
than 100
years ago scientists, while eating goose, duck or pheasant, were flatly stating that
heavier than air
flight was IMPOSSIBLE. (Evidently they thought geese were lighter than air!) The
truth was
alwasy there for them to see.

See Incredible Demonstration of Revolutionary Technologies...
We will prove you can burn water by making H2O gas our of it, and how it could be used to
power your car. We will actually run an internal combustion engine on the stage with water. We
will show you a one horsepower electric motor that runs on a 9 volt flashlight battery. There's
also the Y2K lamp that does not go out all night long in a power failure. We will show you a
lamp that will burn forever, anywhere, but that isn't plugged into any electrical outlet or
conventional power source. We'll show you a magnet that is attracted to aluminum and copper.
We will also show you that live electricity can be harmlessly transferred through the air to the
other side of the room (or many miles away) without any wires at all! You will witness
amazing discoveries that will bring out the TRUTH about REAL science and how much of
it is being suppressed by Big Business trying to protect their markets and keep them status
quo.
Sign Up For A Free Electricity Machine For Your Own Home!...
Imagine never paying another electric bill as long as you live! It is true. You will be able to sign
up for a cooperative program that could make that happen. All it will cost you is a one time
contribution to the program of $275 to sign up to possibly get a free electricity machine installed
on your home that will give you up to 15 kilowatts per hour absolutely free of any costs for as
long as we can sell excess electricity to the power companies. The average all-electric home
uses an average of only 2 kilowatts per hour. You cannot lose more than a $75 registration fee,
because $200 is held by a third party fiduciary until we deliver the hardware. We will explain
the entire program after we prove with live demonstrations that we have the technology. You
will be offered the chance to NEVER PAY ANOTHER ELECTRIC BILL AGAIN....EVER!

Come to America's "Declaration Of Energy Independence" at a show nearest you. Bring
your own test meters and measure the devices for yourself! Do not let skepticism keep you from
having the most enLIGHTening experience of you life, and witness one of the greatest scientific
breakthroughs of the 20th century! You will be invited to join the "unhooked" generation and
sign up to get free electricity for the rest of your life! You absolutely cannot afford to

miss this
FREE seminar! If you just cannot make any of the dates, or you don't want to wait, you can see
it on video. We will send all inquiries an information kit and a two week "Free Look" of the
seminar on video. You do not have to buy it , but we will want it back in two weeks. If the kit is
not returned, you will forfeit a security deposit of $50 and then you can keep the kit. It consists
of a book written by Dennis Lee, a video of the show, audiocassette, CD-ROM, color catalogue
of products and other written materials. To order it, call us at 800-628-5233 or write
EarthEnergy, P.O. Box 631126, Houston, Texas 77263...or visit our website at
http://www.earthenergy.com. GET SMART AND GET FREE!

All Shows Start At 7PM. Show list follows.

Show locations in date order:

SATURDAY, SEPT 18TH HARTFORD, CONNECTICUT
University of Hartford, Lincoln Theater
200 Bloomfield Ave., West Hartford, CT

MONDAY, SEPT 20TH BOSTON, MASSACHUSETTS
Sturbridge Host Hotel & Conference Center
366 Main St. (Rt. 20) , Sturbridge
Directions: Rt. 90 Mass Pike & Rte 84

TUESDAY, SEPT 21ST ROCHESTER, NEW YORK
The Dome Center at the Monroe County Fairgrounds
2695 E. Henrietta Rd., Henrietta, NY
Directions: Take I-390N to Exit 12. Take a right on Lehigh Station Rd. Go north on 15a. Look for the large white dome on the left.

WED., SEPT 22ND AKRON, OHIO
Akron Convention Center
Exhibit Hall #1
77 E. Mill St., Akron

THURS. SEPT 23RD MANSFIELD, OHIO
Renaissance Theatre
138 Park Ave. West, Mansfield

FRIDAY, SEPT 24TH COLUMBUS, OHIO
Watkins Memorial H.S.
8868 Watkins Rd. SW
Pataskala, OH

SATURDAY, SEPT. 25TH INDIANAPOLIS, INDIANA
Indiana State Fairgrounds
West Pavilion

MONDAY, SEPT 27TH NASHVILLE, TENNESSEE
Expo Center, Exhibit Hall B
Exit 66A on I-24

TUESDAY, SEPT 28TH MEMPHIS, TENNESSEE
Sheraton Four Points Hotel
@ Memphis Int'l Airport
2240 Democrat Rd.
Directions:

WED., SEPT 29th ST. LOUIS, MISSOURI
Orlando's Center
2050 Dorsett Village (corner of Dorsett & McKelvey)
Maryland Heights, MO
Directions: Highway 70 West to Highway 270. Turn South approx. 1 mile to Dorsett Rd. Turn right (going west) about 2 blocks to McKelvey Rd. Turn right. Orlando Center is on the left. Plenty of parking.

THURSDAY, SEPT 30TH KANSAS CITY, KANSAS
Memorial Hall
600 N. 7th St., Kansas City

FRIDAY, OCTOBER 1ST SPRINGFIELD, MISSOURI
Gateway Theater
2558 N. Glenstone
Directions: From I-44, Exit South on Glenstone. Go Approximately ¼ of a mile and turn left(east) into drive immediately adjacent to Total Gas Station. Continue straight ahead. This takes you behind the North Town Mall (north side). Continue toward the east end of the mall property and the GATEWAY THEATER will be on your left.

SATURDAY, OCTOBER 2ND TULSA, OKLAHOMA
Union Performing Arts Center
Union High School, 6636 South Mingo Rd.

MONDAY, OCTOBER 4TH - WICHITA, KANSAS
Century II Concert Hall
225 W. Douglas, Wichita

TUESDAY, OCTOBER 5TH GRAND ISLAND, NEBRASKA
College Park near Center Community College
3180 W. Highway 34, Grand Island
Directions: Take I-80 North to Exit 312, which is Highway #281. Go about 5 miles north to the stop light, which is Highway #34. Turn right (going east). Go ¼ mile and turn left (north) into College Park. It is the building on the left.

WEDNESDAY, OCTOBER 6TH OMAHA, NEBRASKA
American Legion Club
4618 So. 139th St., Millard, NE

THURSDAY, OCTOBER 7TH DES MOINES, IOWA
The Marriott
700 Grand Ave., Des Moines

FRIDAY, OCTOBER 8TH MINNEAPOLIS, MINNESOTA
Edina Community Center - Auditorium
5701 Normandale Blvd., Edina

SATURDAY, OCTOBER 9TH SIOUX FALLS, SOUTH DAKOTA
Washington Pavilion of Arts & Sciences
301 South Main, Sioux Falls

MONDAY, OCTOBER 11TH DENVER, COLORADO
THE DOUBLETREE HOTEL
3203 Quebec St., Denver

TUESDAY, OCTOBER 12th CHEYENNE, WYOMING
Best Western Hitching Post
1700 W. Lincoln way, Cheyenne

WEDNESDAY, OCTOBER 13th BILLINGS, MONTANA
The Holiday Inn Trade Center
5500 Midland Rd., Billings
Directions: Exit 446 off I-90

THURSDAY, OCTOBER 14TH IDAHO FALLS, ID
O'Callahan's at The Shilo Inn
780 Lindsay Blvd, Idaho Falls

FRIDAY, OCTOBER 15TH BOISE, IDAHO
Nampa Civic Center

SATURDAY, OCTOBER 16TH YAKIMA, WASHINGTON
Capital Theater
19 South 3rd St., Yakima, WA

MONDAY, OCTOBER 18TH TACOMA, WASHINGTON
Tacoma's Landmark Convention Center
Temple Theatre
47 St. Helens Ave., Tacoma
Directions: Take I-5 to the City Center Exit near the Tacoma Dome. Going North, stay to the right and take the Schuster Parkway Exit. Travel mile and take the Stadium Way Exit. At the Exit, go right on Stadium Way. Take your first left at 4th street. Travel two blocksuntil you come to St. Helens Ave. Go right two blocks. Bldg is on right.

TUESDAY, OCTOBER 19TH PORTLAND, OREGON
Madison High School
2735 Northeast 82nd, Portland
Directions:: I-84 (North to Portland Int'l Airport; South from Airport) Exit 82 Ave. Go North about 8 blocks. Madison High School is on the right.

WEDNESDAY, OCTOBER 20TH EUGENE, OREGON
So. Eugene High School - Auditorium
400 East 19th Ave., Eugene
Directions: From Interstate 5 (North or South) Take 30th Avenue/ Lane Community College Exit (#189) Follow 30th Ave. to the west past College (on the left) to a stop light at Hilyard St. Turn right on Hilyard St. Turn left on 19th Ave. High School is on your left. Parking is available in lots on the east and west side of the school, or on the street.

THURSDAY, OCTOBER 21 RENO, NEVADA
Best Western McCarran House
55 East Nugget Ave., Sparks, NV
Directions: From Interstate 80 East, Exit at Pyramid Way. Take a left on Pyramid, then turn left at Nugget Avenue. Take mile to the MC CARRAN HOUSE.
From Interstate 80 West, Exit at Pyramid Way. Turn right on Pyramid Way, then left at Nugget Blvd. Take mile to McCarran House.

FRIDAY, OCTOBER 22 SAN FRANCISCO, CALIFORNIA
Marin Center,
Veteran's Memorial Auditorium
Avenue of the Flags, San Rafael

2838. SO 35 pass Saturday Sept 18 1999

Newsgroup: rec.radio.amateur.space
Date: 1999-09-21 00:00:00 UTC
From: Peter Hodgson <va3pkh@rac.ca>
Message-ID: <37E77064.AEE74ABC@rac.ca>
Source record: 11104

Hi
Can anyone help me identify a call?
On the Saturday pass I had my first satellite QSO
I was not expecting to succeed after over a year of AO 27 failures.
My first contact I think was N0XCR but I wrote it on a scrap of paper
and it could be N0XLR. Do any of you know if either of these two were on
SO 35?
I was hoping for real audio on Houston Amsat to play back the pass but
there is
no file for this week.
Thanks for reading this hope someone can help.

A N N O U N C I N G

The Worlds Most Advanced
Solar Activity and Space Weather
Early Warning System

SWARM - Solar Warning and Realtime Monitor

Version 2.0

We are proud to announce the long awaited release of Version 2.0 of

our Solar Warning and Real-time Monitoring (SWARM) software, just in time
for the maximum phase of the solar cycle!

The following are just a few of the possible applications:

- Receive notification of when to look outside for auroral
activity (also known as the northern lights, the Aurora
Borealis, or the Aurora Australis). SWARM doesn't miss an
event.

- Determine periods when errors may increase in navigational
equipment such as with Global Positioning System (GPS)
equipment.

- Educational supplement (high-school or University) for
providing
hands-on experience for curriculum dealing with Astronomy, our

Sun, or the Earth's space environment.

- Professional-grade data for space physics, solar physics and
geophysical research.

- Monitor and predict solar activity and its effects on the
Earth.

- Monitor space environment conditions to help protect
satellites.

- Monitor geomagnetic activity to help protect electrical power
grids from geomagnetically induced currents during storm
periods.

- Monitor ionospheric conditions to help determine the
performance

of high frequency radio propagation conditions.

Version 2.0 has some major new enhancements over older versions. A few of the more important enhancements include:

- The ability to produce fully-contoured maps of the Sun's photospheric magnetic fields and the modelled heliospheric current sheet at 3.25 solar radii.

- Intelligently dial out to your Internet Service Provider (ISP)

AND hang up when done, if you connect by phone to the Internet.

- Communicate with other copies of SWARM running on local area networks (LANs) or Wide Area Networks (WANs). Extremely efficient intranetworking can result in signifcantly improved performance.

- SWARM now supports 28 magnetic observatories providing near-realtime (HOURLY) geomagnetic activity information.

- Five new alerts and warnings bringing the total number of settable alerts and warnings supported by SWARM to 68! The new

warnings include Middle and Low Latitude Auroral Activity Watches and Warnings that are based on near real-time solar wind
conditions. You won't miss a single aurora display with these new warnings active!

- A solid Internet Data Aquisition System provides SWARM with much
improved reliability and stability in obtaining data over the Internet. Although the improvements are most notable on Windows
NT 4.0 systems, which now run exceptionally stable, Windows 95

and 98 systems will also benefit from the changes through increased reliability for long-term unattended operation.

- Secure operation for users located behind firewalls.

- Restoration of all data that may have been lost to older versions of SWARM due to unannounced changes by the Space Environment Center in some of their data formats.

- Interactive mouse support on most graphical plots.

- Software shipped on CD includes our Master SWARM Database, a complete, very detailed and contiguous database of SWARM data from 1996 to the present (over 470 megabytes of data). Installation of this database from the CD to your hard-disk is

optional.

- Comes with a detailed electronic Users Guide in Adobe Acrobat Reader format as well as a revamped internal help system, so you can view, search and print out the information you need quickly.

- Compatibility with Windows 95, Windows 98, Windows NT 4.0 as well as the new Windows 2000 operating system.

- Year 2000 Compliance.

For complete details and pricing information, please refer to the SWARM web-page at: http://solar.uleth.ca/swarm. Pricing and upgrade information and forms are available there.

If you purchased a copy of SWARM after April 1999, please contact COler@Solar.Stanford.Edu for pricing information. Otherwise, refer to the pricing table at: http://solar.uleth.ca/swarm

I agree! FO-20 is a great bird. I used a similar setup onboard ship, and
it worked great. Check out http://www.qsl.net/va3rr/cghl/cghl.html

wrote:

Thomas, looks like some people here don't even want to talk about
anything other than the techniques they accept as "right". If these
same people were using oil lamps for lighting today, they would ask
"why" if someone mentioned using electricity to produce light by
heating a filament in a vacuum.

You would get an explanation of how well the oil lamps worked and even
how combustion produced the light (technical description) and how it
was the standard way to to do the job.

If it's the QSL maker program that *I* downloaded, it DOES make QSL cards. It's a nice simple program, easier to use than a graphics program because it's tailored for QSL cards specifically. The only big downfall to the whole thing is that it only allows you to use BMP files for the background, not JPG, but I've been playing with the program and it's pretty nice.

I could not resist. It seems everytime the Macintosh is mentioned in
these newsgroups, an argument soon develops. I fugured I would get the
first shot in this time.

However, having said that, I was rather surprised to see no heated
response in the messages so far. Perhaps ham operators are more
civilized than some of the people in the other newsgroups.

It was a silly comment. I'm glad others recognized it as such.

Best bet is to get as close to the G3RUH standard as possible as he wrote it and the birds use his boards too. Interesting enough, probably the cheapest method (MFJ) gets you there....

The Paccom Spirit II (http://www.paccomm.com/)

Best kept secret around - The MFJ (http://www.mfjenterprises.com/) 9600 Baud TurboPlus® TNC - because, they use boards (someone correct me if I'm out of date) made by Paccomm that are licensed by G3RUH himself - which are the same as on the birds. Paccomm and MJF are the only commercial vendors who use these actual boards. Have used this myself with excellent results. Pick up any MFJ 1270 series TNC (about $75-100) and just add the G3RUH board for about another $100). I do not think the performance of that set-up can be exceeded.

The venerable AEA (now Timewave but discontinued) DSP2232/1232 - I use the 2232 now - fantastic does everything, including the 1200bd sat modes. (actually want to sell mine as I don't do pacsats anymore..)

Timewave PK900 w/ their 9600 bd option board - good set-up - but I never used the Timewave board - the PK900, like their PK232 variants have a TAPR header inside that allows a G3RUH board to be connected pretty easily.

Non-commercial G3RUH boards are still available from TAPR I believe. These can go into any TNC with a TAPR header (MFJ, PK232, PK900, etc).

Kantronics - have not used them for Sat work but reports I've heard rate them fine - 9600 is emulated G3RUH.

I had the DSP-93 from Tapr - 9600 performance was great but it was software emulation of G3RUH.

2851. Re: WISP configuration for PACSAT reception on a TH-D7

Newsgroup: rec.radio.amateur.space
Date: 1999-09-22 00:00:00 UTC
From: Bob Smith <user@msn.com>
Message-ID: <eyI3jMRB$GA.361@cpmsnbbsa05>
Source record: 11117

I had this performance on the following unattended set-up:

Icom 820H w/ CIV
AEA DSP2232
WISP/FODTrack
440: Cushcraft dual band / AG-35 preamp / 50' 9913 Coax / In attic
144: Cushcraft ringo ranger / 50' RG-58 coax / In attic

Average pass 200K - best pass 700K worth of data.

Optimum orientation or equipment? - no way but it does prove that a modest set-up can show results. I live in an antenna restricted subdivision and I just wanted to try it all out. It all met my expectations.

/rant on

Unfortunately, this happens a lot with me in Radio - I want to try different things and once I get them working and a taste of what they can do I move on... (Sats, APRS, TCP/IP, QRP, etc.) I guess the only thing I have stuck with consitently is Navy MARS because of the ongoing public benefit but that is even dying now. Never been a contestor nor DXer because I like to chat and meet other folks - not a lot of that going on either. My most enjoyable HAM experience ever was a 1 hour QSO with a guy from Montana - gave me a real flavor for what it was like to live there.

/rant off

2856. Listen to the easiest amateur satellite - FO29

Newsgroup: rec.radio.amateur.space
Date: 1999-09-22 00:00:00 UTC
From: "KF4FDJ (Mike in Fort Myers)" <seven77@gate.net>
Message-ID: <37E99AC1.BDEEDD3F@gate.net>
Source record: 11122
Cross-posted to: rec.radio.amateur.space,rec.radio.scanner

Since FO-29 is now (BACK) in digitalker mode, I am distributing this FAQ to the space groups.

Since the previous posts on working the FO29 digitalker, I have been asked several questions on how to hear the FO-29 digitalker. What follows is sort of an evolving FAQ. Feel free to distribute this document. KF4FDJ - September 22, 1999

The Japanese satellite, Fuji Oscar 29 (JAS-2), was launched on August 17, 1996, by H-II rocket No.4, along with the earth observation platform satellite ADEOS, from Tanegashima
Space Center of NASDA (National Space Development Agency of Japan). FO-29 is a small LEO (Low Earth Orbit), Japanese owned satellite containing a digitalker, mode JA transponder, and 1200/9600 baud packet capabilities. The mode JA transponder requires a SSB, or CW uplink signal on 2 meters, and transmits a downlink SSB/CW signal on 70 centimeters. Mode JA is a full duplex mode. You WILL hear your own downlink, which is crucial, in order to compensate for doppler. The satellite is also capable of mode JD, (digital) at 1200/9600 baud.

Q Is Fuji Oscar 29 always in digitalker mode, and what is it?
A The digitalker on FO-29 is a digital loop announcement, which makes the same announcement over and over. You will hear, "Ho- ho'kke'kyo, this is JAS two." The first part is the song of a bush warbler. JARL (Japanese Amateur Radio League), plans to cycle digitalker, mode JA, and mode JD. The digitalker message is subject to change. Check announcements on the BB for a mode schedule and other details.

Q Do I need a multimode rig to hear the digitalker?
A Since FO-29 transmits in FM mode while in digitalker, any FM or multimode receiver capable of tuning the 70 cm ham band should be able to detect the signal.

Q Do I have to use a high gain antenna to hear the signal?
A Digitalker operation dedicates most of the power budget of the satellite to the FM transmitter, instead of spreading it across a mode JA transponder. It is a very strong signal! It is possible to hear the satellite with a handheld scanner or transceiver, and a stock "rubber ducky" antenna. Most 70 cm base stations, or scanner listening posts, with fixed antennas, should also be able to tune the signal.

Q I've heard that a circularly polarized antenna is necessary to hear FO-29. Is this true?
A While a circularly polarized antenna will help on mode JA, it is not necessary with the digitalker. It REALLY is possible to copy the

signal with a handheld device and a "rubber duck" antenna. We have been successful with a Yaesu FT-50R and a stock antenna. You will need to rotate the rig (and antenna) for the best orientation. Experience shows that horizontal polarization, with the axis of the antenna perpendicular to the satellite gives the best reception. Experiment!

Q Where do I tune to hear the signal?
A The transmit frequency is 435.910. Of course, you will have to compensate for doppler shift. Just remember you will tune a little higher in frequency as the satellite approaches your position, and a little lower in frequency as it recedes. You will always be tuning higher in frequency when the satellite comes over the horizon. Make sure you have your radio set to tune small increments, as increases and decreases in doppler are gradual.

Q How long will I be able to hear the satellite during each pass?
A Since FO-29 is a low earth orbit satellite, most passes will be between 6 and 18 minutes in duration. Timing is critical in working any amateur satellite.

Q What is the purpose of the digitalker?
A The digitalker presents an easy opportunity for hams and non hams to have their first taste of real time reception of signals from space. Use this opportunity to show a kid, or a terrestrial ham how easy it can be to tune a satellite. This opportunity is excellent for scout meetings, monthly ham meetings, schools, or any place where inquisitive persons congregate.

Q How will I know when the satellite is over my location?
A You will need a program to generate predictions of when the satellite is "visible" to you. An excellent place to find downloadable software for real time tracking of satellites, and other information on the amateur satellite program in general, is:

http://www.amsat.org

Be sure to download the latest keplerian coordinates if you download a tracking program. Each prediction program needs these coordinates to determine where the satellites are, and to help you determine when FO-29 will be over your horizon. Another casual approach, is to use an online prediction site, such as:

http://acsprod1.acs.ncsu.edu/scripts/HamRadio/sattrack

This site will generate pass predictions for a selected satellite.

If you have any comments, additions, or modifications to this document, please contact me directly. We will attempt to post the latest version whenever the satellite is toggled to digitalker mode.

73, Mike KF4FDJ

You might want to add the Motorola 56002 EVM board that has software available for it for both the 9600 and 1200 baud satelites (and other modes) and provides a KISS interface at the serial port.

There is also a alpha version of a 38k4 modem for it.

Howdy,

New content is being added this week. Check out the SWL links, the DX news, or the Propagation Center.

I've moved the QSL and Callbook section off of the main page and onto a page dedicated to just this information. And I've added a lot more to this section.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you
are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have remaining:

QST

[1992 through 1998 issues are $1.00 each - 1999 issues are $2.50 each]

1992 Jan Feb Mar April
1993 Jan Feb Apr May June July Aug Sept Oct Nov Dec
1994 Jan Feb Mar Apr May June July Aug Sept Oct Dec
1995 Jan - Dec
1996 Jan - Dec
1997 Jan - Dec
1998 Jan - Dec (May issue is missing page 73)
1999 Jan Feb Mar Apr May June July Sept Oct $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

2876. Telemetry Beacon for RS satellites. What frequency?

Newsgroup: rec.radio.amateur.space
Date: 1999-09-26 00:00:00 UTC
From: Bob Sikes <rwsikes@mediaone.net>
Message-ID: <OYgH3.2770$ZK5.57087@ndnws01.ne.mediaone.net>
Source record: 11142

I'm just getting into satellites and seems to have confused myself. I was listening to the RS-15 satellite as it passed over New England today. I heard the 20.3525 beacon signal develop and grow in intensity right on schedule. But I was expecting that the beacon would send down the telemetry on the satellites' status. Instead, it was a steady CW tone. Soon I was able to pick up a few signals on the downlink frequency range. They seemed pretty weak compared to what I heard from RS12/13 yesterday.

Is that what the beacon should sound like? If so, what is the frequency is the telemetry data on?

Thanks for help for this rookie

2877. Any Tips on Hiding Antennas?

Newsgroup: rec.radio.amateur.space
Date: 1999-09-27 00:00:00 UTC
From: miamibaker@aol.com
Message-ID: <19990926200003.20844.00002510@ng-fh1.aol.com>
Source record: 11143

I'm looking for ways to hide or disguise antennas. Any suggestions on how to camouflage antennas? How about building antennas that are inconspicuous and not apparent in our ever increasingly home-owner-association controlled world? Have already done the loading up rain gutters, et al, with tuners, so don't need to follow that path. I appreciate any help you can provide in this area.

Thanks very much.

Hello,
I just went to a hamfest north of Denver, Co and was very impressed
with
I a
demo done working AO-27 (and another one I can't remember)

With a handheld (2m/70cm) and a portable ant. (arrow)

I was wondered if there is a place on the net to figure out where the
sat
should be
with the keplerian data. I relize there is tracking software out there
but
I am courious
how I can take that data and figure out the pass of a sat over where
ever I
am
at. btw I think I will be buying one of these arrow ant's come nov
(another ham fest
here in denver) It looked like a blast.

I have a Yaesu FT-470 and Kenwood th-215a that should get me working
the
sat's
correct? thanks

Thomas, it was a spoof strawman organization set up in order to thwart discussion of the NPRM. It never
really existed except in the mind of Eric June, the founder. Once Cecil declared that he was pro-code, the
"org" fell apart - absolutely no reason for being at that point.

73,
Brian

A digitalker is a pre-recorded message, usually changeable by the
sats control operator. You probably know what a repeater is and does.

A repeater is a machine that has an input and an output frequency. You
transmit on the input and listen on the output. The "machine" is
usually in a very high location so as to extent range of
communications. The output is generally higher in power than your
typical HT as well. so your range is extended do to the repeater's
height and power output.

Hi,
do you know about
what could you hear if you had a FM/AM receiver in Alpha Centarury, with

a big antenna targeted Earth? (Earth rotates, revolves etc)
is that true that radio astronomy nowadays could only work in the
farside of Moon where the moon is a good shield against Earths radio
signals?
what will be the effect of transition from analogue to digital? Is it
good for radio astonomers or even worse?
How about SETI? I have heard that some military signals were thought to
be UFO data... Can we do anything to filter earth signals here?
and anyway:how doest Earth sounds from space in the electromagnetic
spectrum?

Can you receive normal domestic radio/TV from the spacestation?

Thanks
Henrik Hargitai

2891. Electromagnetic pullution? (!)

Hi, is there anyone who knows something about:
- how many watts planet Earth trasmit signals to deep space
- if you would be in alpha centaury (or anywhere) what would you hear if you had a big antenna targeted Earth and could receive AM/FM signals (note: Earth rotates, revolves, FM trasmitters are doing it so with it)
- what is the fact about Earth having a ever expanding AM/FM sphere now 70/40 light years big
- how can you be shielded against earth's electromagnetic pollution? Is there total silence on the far side of the Moon? Is it a real problem for radioastronomers???
- in the space station can you receive normal AM/FM transmissions?
- now changing from analogue to digital (in broadcasting) from space the sound of Earth will change?
- I have heard that Earth as planet with magneto and ionosphere has its own electromagnetic radioation. What is that? Freq?

And anyway: is there an electromagnetic polllution?

Bye

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

I once read that the reason we've never been contacted by extraterrestrial civilizations (a point I won't argue with the Roswellians among us) is that at the very leading edge of the sphere of television emissions are the Howdy Doody Show and the McCarthy hearings. Seems like more than adequate reason to avoid us.

Hello,

I like to make a list about all available AMIGA software that is useble for
radio amateur purposes.
So if you now some name, a link on the net, a address where to buy or other?
Please let me now by mailing me.

I'll make the list vieweble for everyone at my homepage.

All information is welcome!

Thanks in advance.

2896. Re: Bearcat Scanner Info

Newsgroup: rec.radio.amateur.space
Date: 1999-10-02 00:00:00 UTC
From: Mark Robinson <fabinfo@fabral.com>
Message-ID: <3PdJ3.3588$JM3.142940@nnrp1.ptd.net>
Source record: 11262

I don't know about the Bearcat III, but an old Bearcat 210 can be modified for WEFAX reception. It is certainly not as good as a dedicated receiver. I did a side-by-side comparison with a Hamtronics WEFAX receiver which did much better but the Bearcat copied a strong signal and is definitely cheaper. The 210's are quite inexpensive on the used market and the mod is floating around the Internet.

2897. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7t478r$n4j$1@news.hawaii.edu>
Source record: 11263
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an automobile accident; the future of this newsgroup is not known. 73 Bill...

>Hi,
>do you know about
>what could you hear if you had a FM/AM receiver in Alpha Centarury, with
>a big antenna targeted Earth? (Earth rotates, revolves etc)

In the bandwidth of an ordinary broadcast AM/FM radio, you'd hear nothing
from Earth at that distance using any antenna that would fit on a planetary
surface. The ERP of broadcast stations simply isn't high enough to yield
a signal with a positive SNR at that distance using any practical receive
antenna.

If the putative Alpha Centurians had a dish the size of their solar system,
it would be a different matter. That would give enough antenna aperture to
receive signals from broadcast stations on Earth with a positive SNR. *We*
can't erect an antenna even a fraction that size, but it is conceivable that a
very advanced civilization might be able to do so (though *why* they'd go to
so much effort is another question, our programming isn't all that good).

That's not to say that we couldn't send a signal which *could* be heard
at that distance with a practical antenna size. We could, and we have.
But it wasn't a broadcast station signal. It was a very narrowband
transmission using the 1,000 foot Arecibo radio astronomy dish, and a
very high power transmitter. If I recall correctly, it was calculated that
the signal would be detectable at a distance of 16 light years by a recieving
dish of similar size.

>is that true that radio astronomy nowadays could only work in the
>farside of Moon where the moon is a good shield against Earths radio
>signals?

No it isn't true. There are a large number of active radio astronomy sites
in use on Earth. At the frequencies where most of these operate, radio
signals don't propagate well beyond the horizon. So terrestrial stations
further from the site than about 50-100 miles simply aren't an issue.
The Earth itself blocks their signals.

>what will be the effect of transition from analogue to digital? Is it
>good for radio astonomers or even worse?

Probably irrelevant other than that digital radio may make new demands
on spectrum to carry all of the new services being offered. That would make
it harder for radio astonomers to find a locally quiet frequency on which to
listen.

>How about SETI? I have heard that some military signals were thought to
>be UFO data... Can we do anything to filter earth signals here?

The simplest way to separate extraterrestrial signals from terrestrial signals is that the ET signal will have a characteristic doppler shift correlated to the Earth's rotation. Terrestrial signals, and low orbit satellite signals, will have a different doppler shift signature. The SETI@home project makes use of this fact as a method of identifying candidate signals.

As to UFOs, assuming they exist, they could be using any sort of radio communications system, or none at all, ie they may not even use radio. There's no way to characterize what they might emit.

>and anyway:how doest Earth sounds from space in the electromagnetic
>spectrum?

About the way it sounds when listening here on the surface, except that most of the signals below the upper HF region don't make it out past the ionosphere.

>Can you receive normal domestic radio/TV from the spacestation?

TV, yes, FM broadcast, yes, AM broadcast, almost certainly not.
But you'd only get any particular station for a short time, while it is above your horizon, and you'd get interference from all the other stations on the same frequency which are also above your horizon at the same time. So unless it is a clear channel station (there aren't any clear channel TV or FM broadcast stations in the US), all you'd get is a mass of interference during the few minutes it, and its fellows, are above your horizon on each orbit.

Your horizon is a lot larger in orbit than it is when you're on the surface of the Earth, so stations you wouldn't hear on the Earth's surface, because they're over your horizon, would be booming in on the space station and interfering with each other.

2900. Clamps for Yaesu Satellite Rotors?

Newsgroup: rec.radio.amateur.space
Date: 1999-10-02 00:00:00 UTC
From: bshort@speedchoice.com
Message-ID: <MPG.1260a8afe441099897bd@news.speedchoice.com>
Source record: 11266

Clamps for Yaesu Satellite Rotors?

I recently purchased a set of Yaesu G-5600 satellite rotators used.
The price was right and I'm quite pleased in that regard, however I
do, now, find myself in need of a couple parts for them:

1. A mast clamp to allow the az and el rotators to be separated.

2. The long threaded rods and clamps for mounting the el rotator
to a mast instead of directly on top of the az rotator as presently.

I am fairly certain Yaesu sells #1 above through their dealer network,
but I'd buy used ones if available.

#2 I have never seen sold... If you have these extra, I'd buy them, but
otherwise I suppose I would have to order these through Yaesu parts?

I am putting these on a short "roof tower" with thrust bearing mounted
to a wooden platform (built by me) sitting on top of the flat patio.

Any help or suggestions welcome.

Thanks, Brian

Source record: 11267

Assuming you have all the normal hardware and clamps to mount the entire rotor AZ and EL assembly atop a mast, I think all you need a "separation kit" to accomplish both of these. I have a G-5400 AZ portion mounted in my tower with the EL portion on a mast above the tower thrust bearing. When you install the seperation kit, the mast clamp which normally mounts (under) the AZ portion atop a mast now goes on top of the AZ rotor and drives the mast holding the EL rotor. The AZ rotor now bolts to your tower rotator plate. Most of the separation kit hardware is for the purpose of mounting the EL rotor to a mast. Call AES and buy the kit, about $26. If you are using a pushpole instead of a tower with rotator plate, you will need to get another cast aluminum mast clamp, not included in the kit.

On the other hand, I have seen complaints from radio astronomers about
transmissions from satellites... e.g. the "Astra" satellite company has so
many satellites at the same orbital position that it has been "extending"
the satellite 11 GHz band downwards towards a frequency where astronomers
like to listen. Their band now starts just above our 3cm band.

The Yaesu G-5400 and G-5600 rotors are not very expensive, but they
are bound to fail when put in a wet climate (especially the elevation
rotor).
Alternatives are much more expensive...

A nice antenna for 2m/70cm is the MASPRO pair.

>2. What freq. would be heard in the Chicago Area?

The frequency is not dependent on the area. Amateur satellites orbit
around the earth. That is why you need the tracking.
The location only determines which satellites you can never hear. You will
not hear a satellite that is in a low-earth orbit with an inclination less
than your latitude minus about 25 degrees.
Most satellites have enough inclination, but those launched in a 28 degrees
inclination orbit (typically from a shuttle) cannot be received when you
are further north than about 50 degrees.

Source record: 11274

Can't tell you where to find the info, but you are correct about
bouncing the signals off the moon. On 144 mhz it usually takes 2
stations running near the legal limit transmitter output and 4 antennas
with about a 20 foot booms and a very low noise preamp.

There are a few stations that have very large antenna systems and they
can work stations running around 100 watts to a single yagi antenna.
The frequency in use is usually just above 144,000,000. The mode is CW
sent at slow speed.

Not sure what bands have been used, but sure that 6 meters and above
have been used, maybe 10 meters also.

I'll let the more experienced answer that one...

>2. What freq. would be heard in the Chicago Area?

It isn't that simple. Start at these URLs for more info. You need
to get a sat tracking program and keep it updated with current orbital
data. Start by getting STSORBIT Plus (My favorite for the past 8-9
years):

http://www.dransom.com/

Orbital data in 2-line format (used by most programs) here:

http://celestrak.com/NORAD/elements/index.html

Check out AMSAT:

www.amsat.org

Some other sat pages:

http://www.cnnet.com/public/ve6bpr/page2.htm

http://members.aol.com/greg6fzh/satcom.htm

http://www.njin.net/~magliaco/

http://www1.mhv.net/~trandall/welcome.html

http://www.newwave.net/~jharmon/

http://www.newwave.net/~jharmon/satlist.htm

That should be a good start for you!

73,
Tom

From: Clifford Buttschardt <cbuttsch@slonet.org>
Message-ID: <Pine.GSO.3.95.991005165430.18765D-100000@oso.slonet.org>
Source record: 11280

Hi all. I will be giving a paper at the AMSAT convention this next weekend on just that type of antenna! The trick of course, with most ham LEO antennas is to use circular polarization. With a patch, this becomes most difficult! There are two programs that work well. One by Roger Cox, WB0DGF is called patch16.exe and is easy to use. The circular program is by W1GE and is rather difficult to understand but dimensions will be given at the AMSAT convention. Do build a linear patch first until we can prove the circular design a bit more. I send patch16.exe to you as an attachment in a message direct to you rather than include it on the newsgroup. Indeed it works very well for higher elevations and can be tilted for expected low angles also. Often it is used in skylight openings in limited access situations where outside antennas are not possible.

Greetings..

If I'm not mistaken, doesn't this constitute advertising? Didn't I
read somewhere that (ultimately) businesses weren't supposed to use
newsgroups for their own advertising..?

Perhaps not...

Cheers,
Gary

It's called Earth Moon Earth (EME). The ARRL has material on this and you
can find some stuff on the net. There are also contests for EME. Some day
I will try it. Right now I want to try satellite communication.

If you have more questions, drop me a line and I will see what is in the
books I have.

Good Luck,

2922. Re: Conic Section Question

Newsgroup: rec.radio.amateur.space
Date: 1999-10-06 00:00:00 UTC
From: "W. BENNETT" <popper41@earthlink.net>
Message-ID: <7thftm$9dc$1@birch.prod.itd.earthlink.net>
Source record: 11288
Cross-posted to: alt.astronomy,sci.alt.astro,gac.physics.astronomy,nctu.club.astronomy,rec.radio.amateur.space,sci.astro,sci.astro.amateur,sci.astro.satellites.visual-observe,sci.geo.satellite-nav,sci.space.shuttle

Well, a vector is an n-tuple, and in R2, a vector V1 is (x1,y1) so

for an ellipse / hyperbola of the form Ax^2 + By^2 + Cx + Dy + E = 0
we need four duples V1, V2, V3 and V4 to form the following determinant.
(x^2 y^2 x y 1
(
det (x^2 y^2 x y 1) = 0
(1 1 1 1

(x^2 y^2 x y 1
(2 2 2 2
(
(x^2 y^2 x y 1
(3 3 3 3
(
(x^2 y^2 x y 1
(4 4 4 4

For a circle of the form Ax^2 + Ay^2 + Bx + Cy + D = 0
we need three duples in R2, namely V1, V2, & V3 to form the
following determinant
((x^2 + y^2) x y 1
(
(x^2 + y^2 x y 1
(1 1 1 1
det (x^2 + y^2 x y 1) = 0
(2 2 2 2
(x^2 + y^2 x y 1
(3 3 3 3
(

A line of the form Ax + By + C = 0
would need two duples, V1 & V2 so

(x y 1
det ( ) = 0
(x y 1
(1 1
(
(x y 1
(2 2

This is a linear algebra applications approach.
It also works in R3.

Calculus III also threats this topic in R3 with
Vi = (x , y , z), a triple.
i i i

Did you need a vector conversion from "magnitude at an angle"
to an r-tuple?

2924. Conic Section Question

Newsgroup: rec.radio.amateur.space
Date: 1999-10-07 00:00:00 UTC
From: askensey@earthlink.net
Message-ID: <37fc276a.1762065@news.earthlink.net>
Source record: 11290
Cross-posted to: alt.astronomy,sci.alt.astro,gac.physics.astronomy,nctu.club.astronomy,rec.radio.amateur.space,sci.astro,sci.astro.amateur,sci.astro.satellites.visual-observe,sci.geo.satellite-nav,sci.space.shuttle

I'm studying a modified Lambert problem, and I'm stumped. Here's the question:

Given: Ri - Initial position vector
Rf - Final position vector
V - Arbitrary unit vector in the plane of Ri and Rf

Can I determine the conic section that passes through Ri and Rf, whose tangent at Ri is given by V? Any information about the conic section would be helpful. For example, if I could just determine the size, but not orientation, that would be extremely helpful.

The only other piece of information is that the focus of the conic section is at the origin. I do not know apriori if the conic section is an ellipse, parabola, or hyperbola.

I have no other knowledge about the conic section (i.e., semi major axis, semi minor axis, orientation with respect to the coordinate system that defines Ri, Rf, and V).

I realize that you can devise an iterative method, but I am looking for a direct (analytic) solution.

Can anyone out there offer a suggestion (or a solution)?

Alisa

There's a lot of resources out there. The following pages have a
bunch of links (and I'm sure you can find a lot more):

http://www.celestrak.com
http://www.fc.net:80/~mikem/

As far as a recommendation, I personally use OrbMaster. You can get
a lot text output of orbital information. You can also plot several
3D perspectives (ground to spacecraft, spacecraft to ground,
spacecraft to spacecraft, sun to earth, etc). It has a bunch of other
neat features that I haven't found in a lot of other programs. I
don't think you can use it to drive your antenna, though, so it might
not be exactly what you're looking for. You can get the shareware
version at

http://www.pond.com/~ssp

Take a look and let me know what you think.
Alisa

Hi
Glad you asked!

I have used the 2 meter Eggbeater for about 4 years now. I find it to
be an excellent performer. Interestingly enough, it is also superb on
the weather satellites on 137 Mhz. I have used it for wxsats more than
hamsats. It has an almost perfectly symetrical pattern, which is ideal
for any LEO's. On wxsats, its really great as it eliminates the
annoying dropouts in received images common to many other omni
antennas. On hamsats, it can'tbe beat.
Its a bit pricy, but its been up on the roof through all kinds of
weather now and still performs like new. By the way, I have also used
it on terrestrial SSB with fine results.
Buy one!

I have successfully used the Eggbeaters to access the FO birds, operating from my apartment balcony.
Found I needed to use a preamp on 70cm (I use the ARR GasFET), & a Teletec amp on the uplink.

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Listening Mode: AM
Recording method: listening by ear

September 1999

Number of meteors heard in one hour interval

```
| UT
Sep | 09h 10 11 12 13 14 15 16 17 18 19 20 21 22 23 00
----+------------------------------------------------------------
12 | - - - - - 2 18 9 4 - - - - - - -
```

Notes:
. no corrections for radiant position made to the counts.
. (-) means no observations made.
. * = Interference.
. virtually no reflections heard, probably because of an offset of the
filter or other hardware problems.

Mike Boschat

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs

66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
BObserving method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and
Windows available].

September 1999

Raw counts of reflections with a duration of at least 0.027 s
during one hour interval starting at UT:

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,

an indication for potential stream activity.
. local time = UT + 2 hours
. thunderstorms on Sep 23-25

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:
dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. rather quiet month regarding sporadic E
. a distinct increase towards the end of the month during the morning hours, probably due to the Sextantids (radiant: R.A. = 152 deg, Decl. = 0 deg, rises at 5h UT, sets 15h30 UT)

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km, direction south and 2) a 30 kW TV video carrier from Sicilia, Italy, distance 900 km, south. The total echo power of both transmitters is processed into same 40 Hz virtual receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record the audio signal. 20 channels of 2 Hz width are used for meteor B identification, another channel is used for automatic interference rejection. Sampling interval: one 4096 point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also available at http://www.qsl.net/oe8fnk this includes now also Es, FAI and fireball statistics.

The meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value, to show the reduced accuracy. Results for less than 20 min. observing time are excluded.

Counts of reflections longer than 6.5 seconds, assumed to be overdense.

| Sep 1999

Propagation overview for September 1999

E : sporadic-E or E-layer propagation
F : FAI (field aligned irregularity)
- : propagation only via meteor echoes.
(blank) : no data available

| Sep 1999
```

Note:
. good activity on September 28-30, seems to be from the Sextantids.

Werfried Kuneth

Observer: R.B. Minton
Location: Raton, NM (104 26' W, 36 54' N, 2000 m above sea level)
Frequency: 92.9 MHz
Transmitters: KTZA FM 100 kW, Artesia NM, dist 444 km, geogr azim 178 deg
KSPZ FM 53 kW, Color. Springs, dist 217 km, geogr azim 352 deg
KYBR FM ? kW, Espanola NM, dist 180 km, geogr azim 236 deg
???? FM ? kW, Juarez Mexico, dist 579 km, geogr azim 198 deg
KWFM FM 90 kW, Tucson AZ, dist 798 km, geogr azim 233 deg
Antenna: folded dipole, on 6.3 m high mast, oriented N-S
Receiver: Subaru 12 V DC car radio with digital tuning
Observing method: conditioned audio input in the game port of an IBM 386 SX-50 PC, 128 samples/second, DOS/Basic software, automatic

Note:
B . lightning noise (&) on August 7 and 20.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)

Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.
B

Hourly echoes over 10 dB SNR

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

SB SPACE @ ARL $ARLS007
ARLS007 Phase 3D Accepted for "First Suitable" Ariane 5 Launch

ZCZC AS07
QST de W1AW
Space Bulletin 007 ARLS007
From ARRL Headquarters
Newington, CT October 8, 1999
To all radio amateurs

SB SPACE ARL ARLS007
ARLS007 Phase 3D Accepted for ''First Suitable'' Ariane 5 Launch

AMSAT-NA says the Phase 3 Amateur Radio satellite has been accepted as a payload for the ''first suitable'' Arianespace Ariane 5 vehicle launch. The announcement came today from Phase 3D Project Leader and AMSAT-Germany President Karl Meinzer, DJ4ZC, who said a launch opportunity could come during the first half of next year.

''As the primary agency responsible for securing a launch opportunity for Phase 3D, I am pleased to announce that AMSAT-Germany and Arianespace have now come to an agreement calling for the launch of P3D as a secondary payload aboard the 'first suitable' Ariane 5 flight,'' Meinzer said in a statement from Marburg, Germany. ''From the very beginning of the Phase 3D project, we considered the Ariane 5 series our primary launch vehicle. Our long history of success and mutual cooperation with both the European Space Agency and Arianespace, coupled with our need to lift P3D into a high geostationary transfer orbit, made the Ariane 5 the unanimous choice by AMSAT.''

Specific details of the launch agreement were not released.

AMSAT-NA President Keith Baker, KB1SF, was elated with the latest news. ''I'm very pleased to see that AMSAT-DL's negotiations with Arianespace have resulted in a launch contract for Phase 3D, and I'm delighted we are again slated to fly on an Ariane vehicle,'' he said. ''Following the resounding success of Ariane Flight 503, the Ariane 5 has now proven itself to be a very capable launcher.''

Baker said that given past successes with ESA and Ariane, ''I believe we now have an unbeatable combination.'' Once in orbit, Baker said, ''the Phase 3D satellite will not only help us usher in the new Millennium, it will also signal the dawn of a brand new era for Amateur Radio.''

While both AMSAT presidents expressed optimism for an early launch of the satellite, Meinzer expressed caution that the wait for the ''first suitable'' flight could still turn out to be a long one. ''While the launch of Phase 3D could come as early as the first half of the year 2000, we must remember that Ariane's launch manifests are continually being updated to accommodate market changes as well as the availability of other payloads,'' he explained. Meinzer said ''one or more changes'' to P3D's anticipated launch date as well as its specific Ariane 5 mission number ''are a very real possibility before our satellite actually flies.''

ARRL Executive Vice President David Sumner, K1ZZ, welcomed the AMSAT announcement. ''Congratulations to AMSAT's Phase 3D team on moving another important step closer to launch,'' Sumner said. ''For those who have been putting off getting their stations ready for Phase 3D, the time for procrastination is just about over.'' The League has been a major contributor to the Phase 3D project.

Based on its new 'standby' launch status, Phase 3D is slated to be delivered to the Guiana Space Center in Kourou, French Guiana, later this month to be ready once a specific Ariane 5 launch is identified.

The Phase 3D project has been an international effort that has worked with donated resources. In addition to AMSAT-DL and AMSAT-NA teams, AMSAT groups from Austria, Great Britain, Japan, Canada, Finland, Russia, Belgium, the Czech Republic, Slovenia, France, New Zealand and Hungary also have participated.

AMSAT says that while Phase 3D's primary focus is on improved worldwide satellite communication, the satellite also will have a very positive influence on the future of Amateur Radio. ''Phase 3D will be Amateur Radio's premier vehicle to continue the quest for new communications technologies for generations yet unborn,'' the AMSAT announcement said.

Oh yea! Good news indeed!!

SPECIAL NEWS RELEASE FROM AMSAT NEWS SERVICE

SB SAT @ AMSAT $ANS-281.01
PHASE 3-D TO BE LAUNCHED ABOARD AN ARIANE 5

AMSAT NEWS SERVICE BULLETIN 281.01 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 08, 1999
TO ALL RADIO AMATEURS
BID: $ANS-281.01

MARBURG, GERMANY (October 8, 1999) AMSAT's most ambitious project to date... the International Phase 3-D communications satellite... has now been accepted for launch aboard an Arianespace Ariane 5 launch vehicle.

Dr. Karl Meinzer, DJ4ZC, AMSAT-Germany's President and Phase 3-D Project Leader released the following statement:

"As the primary agency responsible for securing a launch opportunity for Phase 3-D, I am pleased to announce that AMSAT-Germany and Arianespace have now come to an agreement calling for the launch of P3-D as a secondary payload aboard the "first suitable" Ariane 5 flight.

Dr. Meinzer went on to comment that, "From the very beginning of the Phase 3-D project, we considered the Ariane 5 series our primary launch vehicle. Our long history of success and mutual cooperation with both the European Space Agency (ESA) and Arianespace, coupled with our need to lift P3-D into a high geostationary transfer orbit, made the Ariane 5 the unanimous choice by AMSAT."

Following standard protocol, specific details of the launch agreement were not released.

AMSAT-NA President Keith Baker, KB1SF, was elated with the latest news. "I'm very pleased to see that AMSAT-DL's negotiations with Arianespace have resulted in a launch contract for Phase 3-D, and I'm delighted we are again slated to fly on an Ariane vehicle," he said. "Following the resounding success of Ariane flight 503, the Ariane 5 has now proven itself to be a very capable launcher. When coupled with our many past successes with ESA and Ariane, I believe we now have an unbeatable combination. Once it is in orbit, the Phase 3-D satellite will not only help us usher in the new Millennium, it will also signal the dawn of a brand new era for Amateur Radio," he concluded.

While both AMSAT presidents expressed optimism for an early launch of the satellite, Dr. Meinzer expressed caution that the wait for the "first suitable" flight could still turn out to be a long one. "While the launch of Phase 3-D could come as early as the first half of the year 2000, we must remember that Ariane's launch manifests are continually being updated to accommodate market changes as well as the availability of other payloads. Thus, one or more changes to P3-D's anticipated launch date, along with its specific Ariane 5 mission number, are a very real possibility before our satellite actually flies," he said.

Nevertheless, based on its new 'standby' launch status, Phase 3-D is slated to be delivered to the Guiana Space Center in Kourou, French Guiana later this month so as to be ready for quick integration once Arianespace identifies a specific Ariane 5 launch vehicle for P3-D's ride to orbit.

While its primary focus is on improved worldwide satellite communications, the Phase 3-D satellite will also have a very positive influence on the very future of Amateur Radio. Built primarily from donated resources, the International Phase 3-D team includes participating AMSAT groups from Austria, Great Britain, Japan, Canada, Finland, Russia, Belgium, the Czech Republic, Slovenia, France, New Zealand and Hungary - in addition to the groups from AMSAT-Germany and AMSAT-North America.

AMSAT is very proud of its long tradition of excellence and the contributions it has made to the advancement of space communications, space education and the space sciences. Phase 3-D will be Amateur Radio's premier vehicle to continue the quest for new communications technologies for generations yet unborn.

[ANS thanks AMSAT President's Dr. Karl Meinzer, DJ4ZC and Keith Baker, KB1SF, and congratulates the entire Phase 3-D team on this exciting announcement]

SB SPACE ARL ARLS007
ARLS007 Phase 3D Accepted for ''First Suitable'' Ariane 5 Launch

AMSAT-NA says the Phase 3 Amateur Radio satellite has been accepted
as a payload for the ''first suitable'' Arianespace Ariane 5 vehicle
launch. The announcement came today from Phase 3D Project Leader and
AMSAT-Germany President Karl Meinzer, DJ4ZC, who said a launch
opportunity could come during the first half of next year.

''As the primary agency responsible for securing a launch opportunity
for Phase 3D, I am pleased to announce that AMSAT-Germany and
Arianespace have now come to an agreement calling for the launch of
P3D as a secondary payload aboard the 'first suitable' Ariane 5
flight,'' Meinzer said in a statement from Marburg, Germany. ''From
the very beginning of the Phase 3D project, we considered the Ariane
5 series our primary launch vehicle. Our long history of success and
mutual cooperation with both the European Space Agency and
Arianespace, coupled with our need to lift P3D into a high
geostationary transfer orbit, made the Ariane 5 the unanimous choice
by AMSAT.''

Specific details of the launch agreement were not released.

AMSAT-NA President Keith Baker, KB1SF, was elated with the latest
news. ''I'm very pleased to see that AMSAT-DL's negotiations with
Arianespace have resulted in a launch contract for Phase 3D, and I'm
delighted we are again slated to fly on an Ariane vehicle,'' he said.
''Following the resounding success of Ariane Flight 503, the Ariane 5
has now proven itself to be a very capable launcher.''

Baker said that given past successes with ESA and Ariane, ''I believe we now have an unbeatable combination.'' Once in orbit, Baker said, ''the Phase 3D satellite will not only help us usher in the new Millennium, it will also signal the dawn of a brand new era for Amateur Radio.''

While both AMSAT presidents expressed optimism for an early launch of the satellite, Meinzer expressed caution that the wait for the ''first suitable'' flight could still turn out to be a long one. ''While the launch of Phase 3D could come as early as the first half of the year 2000, we must remember that Ariane's launch manifests are continually being updated to accommodate market changes as well as the availability of other payloads,'' he explained. Meinzer said ''one or more changes'' to P3D's anticipated launch date as well as its specific Ariane 5 mission number ''are a very real possibility before our satellite actually flies.''

ARRL Executive Vice President David Sumner, K1ZZ, welcomed the AMSAT announcement. ''Congratulations to AMSAT's Phase 3D team on moving another important step closer to launch,'' Sumner said. ''For those who have been putting off getting their stations ready for Phase 3D, the time for procrastination is just about over.'' The League has been a major contributor to the Phase 3D project.

Based on its new 'standby' launch status, Phase 3D is slated to be delivered to the Guiana Space Center in Kourou, French Guiana, later this month to be ready once a specific Ariane 5 launch is identified.

The Phase 3D project has been an international effort that has worked with donated resources. In addition to AMSAT-DL and AMSAT-NA teams, AMSAT groups from Austria, Great Britain, Japan, Canada, Finland, Russia, Belgium, the Czech Republic, Slovenia, France, New Zealand and Hungary also have participated.

AMSAT says that while Phase 3D's primary focus is on improved worldwide satellite communication, the satellite also will have a very positive influence on the future of Amateur Radio. ''Phase 3D will be Amateur Radio's premier vehicle to continue the quest for new communications technologies for generations yet unborn,'' the AMSAT announcement said.

Hams have done that for alomst 40 years. Not sure of the exect date
when this was done between two stations. It has been done on
50,144,220,440 ,1296 MHz and probalby several other bands.
That is CW between two ham sations.

There are lots of hams your age and younger. If you study "Now You're Talking" or any of the other text books on gettting a license, you will find a lot of basic material about types of radios and antennas.

>
>
> Thank you for putting up with my bulky text, as you can tell I am
> enthusiastic about operating in the near future. Anxiously awaiting
> replies.

As you have seen from the other replies, most hams are more than willing to help others. You just happen to have picked one of the more difficult aspects of ham radio. Don't let that stop you. Just recognize that you have set yourself a worthwhile challenge and don't get discouraged if it takes some effort.

One last comment. Beauty is in the eye of the beholder. Many hams appreciate a well made antenna as a work of engineering achievement. But you are welcome to have your own opinion. :-)

73 & hope to hear you on the radio

This is called EME and Hams do it on a regular basis try this link to see when the next activity is occurring. Follow the EME links:

http://raven.cybercomm.net/~slapshot/dxing/dxprop.html

I have actually received EME CW with my 2m oscar sattellite downlink antenna. The frequencies used are in the lower portion of 144 MHz.

DO YOU need the hardware to convert TTL to RS-232 or the
software ? I use Mac doppler Pro for the software
and a MAX-232 or MAX-233 chip to get RS-232,
I guess a line driver and hex inverter would work too.

QST has a CAT hardware artical some years ago

Go to www.amsat.org for more info. One in particular is AO-27.
145.850 Fm uplink, 436.790 FM downlink. Remember to compensate for
doppler shift on the downlink. You can hear the FO-29 digitaker on
435.910. The message sent is "This is JAS 2" and is repeated over and
over again. The voice is female. There is a "beep boop" sound as well
after the message, use this sound to zero in on the signal.

73,
Tom

2961. Moonbounce Experiment Collaboration?

Newsgroup: rec.radio.amateur.space
Date: 1999-10-12 00:00:00 UTC
From: ralph sansbury <sansbury@bestweb.net>
Message-ID: <FIPM3.3174$QI5.169060@monger.newsread.com>
Source record: 11177

I would like some help in bouncing a signal off the moon and receiving
the amplified pulse and doing the same thing but blocking the receiver
during the time of reflection from the moon say from 1 to 1.5 seconds after
the emitted pulse of say .1sec duration every 5 seconds.
Another question or two: If the surface in the radar equation is given
by pi times the square of 1086miles and the fourth power of the distance by
240,000 then the power at the receiver is proportional to
10^6/10^21 or 10^-15.
Then the other factors in the numerator the product of the emitted
power, the gain of the antenna and the area of the receiving antenna are
reduced by the atmospheric losses in the denominator.
All of this must give a number which is not below a certain level of
wattage, milliwatts? picowatts? that with amplification can be observed as
something above noise on an oscilloscope etc. and there should be some
measure of the propagation delay between the received signal and the
sufficiently amplified signal.?
Since the amplitude of the signal is proportional to the square of the
frequency, Would it be cheaper to use a very high frequency in the
transmitter etc.?

>sufficiently amplified signal.?

The total receiver noise depends of the bandwidth used and of the
noise generated in the receiver (mainly in the first preamplifier),
the thermal noise from the Moon, the solar noise from the Sun
reflected from the Moon and the galactic background noise from the
Milky Way, the spillower noise from the ground close to the receiving
antenna etc. This varies both with frequency and the position of the
Sun and Moon relative to the receiving station and relative to the
stars.

The effective antenna system temperature might be 30 K .. 3000 K, but
assuming it is close to 300 K (room temperature), the noise power
density would be -174 dBm/Hz (0 dBm = 1 mW), so from this you can
calculate the receiver noise power when the bandwidth and total
antenna system noise temperature is known. In order to be detectable,
your signal must be stronger than this noise power.

> Since the amplitude of the signal is proportional to the square of the
>frequency, Would it be cheaper to use a very high frequency in the
>transmitter etc.?

The path loss increases by 6 dB/octave, but on the other hand the gain
of a parabolic reflector increases with 6 dB/octave and if the same
antenna is used for both Tx and Rx, a net improvement of 6 dB/octave
would be expected. However, it becomes increasingly difficult to
generate high powers in the microwaves at reasonable prices. However,
EME has been done on 10 GHz with 6.4 m dish and with a 13 W solid
state transmitter. Check out:

http://personal.eunet.fi/pp/oh2aue/

and select the microwave EME subpages.

No. The commercial satellite stuff works around 12 GHz, which means
you can often adapt it to 10 GHz without too much difficulty. Depends
on exactly what gear you've got. I have a couple of Ku-band LNBs
(old Astra stuff, bought from a supplier in England) converted to
10 GHz and they work very nicely...

Terrestrial MMDS works on 2.5 GHz and is (relatively) straight-
forward to convert to our 13 cm band.

Unfortunately not because I am asking for something which is not
routinely done in obtaining
reflected signals from the moon.

2971. Talking Pyramids- making a galctic statement

Newsgroup: rec.radio.amateur.space
Date: 1999-10-14 00:00:00 UTC
From: Duncan Falconer <falconer@indigo.ie>
Message-ID: <_8fN3.2728$r46.1582@news.indigo.ie>
Source record: 11187

I'm sure that many people have tried to understand the reason why the ancient pyramids of Egypt were built so long ago, with such great accuracy, such that they were made to mimic the position of the Orion's belt. Well one theory which is worth adding to your own is the one I came up with last Sunday evening.

This pyramid, shown on the documentary, could have been used as a unique communication device. The Discovery Channel (UK) showed a program discussing ancient pyramids, one of which included the Queens chamber inside Khufu. In it there is shaft leading to it from the outside world. The dimensions of the shaft looked to be about the size of a regular clay brick which one uses in the masonry trade. How ever when the shaft was found, the person doing the excavation discovered that it actually stopped a few inches short of the chamber. The shaft it self is linear and if one could see along it, one would see that points directly up at a particular constellation of stars which used to be held in high regard at the time by the Egyptians of the time. So now, that questions were why were the designers of the pyramid so meticulous in their planning and construction. Well here is my answer (Below is a URL address which will take you to a web site which has a 360 degree video of the Queens chamber).

The Queens chamber appears to be located in the centre of the pyramid. Many people believe that pyramids have strange powers etc, so the centre of the pyramid is also know to be the focal point for this strange energy force. Remember there was a craze when people started re-sharpening their razor blades with replica pyramids- well this is the same force. Well this centre chamber can be likened to the LMB on a satellite dish. An LMB is a device with many small antennae wires inside it used to pick up very high radio frequencies in the gigahertz range. Well if a radio source could have been generated by some one with technical know how at the time of the pyramid construction, he would have been half way to making his transmitter.

Now, the design and sheer density of the pyramid may have had a role in amplifying the radio source within the Queens chamber. The signal could have been very weak and very rough, covering a wide spectrum of wavelengths- sounding like noise. The builder had to use what ever natural materials and resources he could find. Then in order to select a specific wavelength to transmit his message or place a radio beacon, he use a small shaft- pointed to a specific constellation in the sky. The length and dimensions of the shaft would be used as his hard wired wavelength selector. The sheer density of the stone around the shaft would absorb just about all wave lengths, leaving just a few selected ones to pass through, to carry on toward their destination.

I can only think that this type of communication would have been based on line of sight- that which is used for satellite and microwave transmitters. In any case. There's a prize for the person/people who prove this theory right. They would prove it. Just imagine if on of the seven wonders of the world was also one of the oldest known energy transmitters. That would make it the discovery of the millennium. Otherwise this is all just interesting reading.

Best regards
Duncan G. Falconer

PS great 360 degree images of the Queens chamber, showing the shafts which I am talking about above can be found on this webiste: http://www.pbs.org/wgbh/nova/pyramid/ Just follow the guide to enter the pyramid.

the emitted pulse of say .1sec duration every 5 seconds."

Well. Maybe you need to re-phrase your question. It is clear as mud to
me what you want to do and how it is different from radio amateurs keying a
CW "hi" and listening to the echo 2.5 seconds later...

But do you block the antenna during the time of reflection for 1 to 1.5
seconds after each emitted pulse and then unblock the antenna after this etc
for many repetitions?

Whatever do you expect to find by "blocking the receiver" that
you would not find without blocking anything? Perhaps the
answer to this query will shed some light on exactly what it
is you are trying to do...

So, what does this program supply that isn't already part of just about every word processor (let alone page layout programs) that's in existance today?

Granted, MS Word is a pain to do some things in, but it usually can be done.

That's what I used to do the W4CRC QSL cards..scanned in the pictures of the equipment and tower site, and then K0SVX, K7MLE and I probably spent an hour moving stuff around until we got something we liked. Print 'em 4 up on a color printer with pre-perf postcard stock.

I wonder if Avery sells a postcard sheet. If they do, it
probably comes with all the formating info needed to
generate anything you want using their postcard
sheets (assuming such may be available).

>for many repetitions?

Sorry Ralph, I still have no idea what you want.
Blocking the antenna? With a metal dome or something? That will be
difficult I guess, but not very much on topic here.

Blocking the signal between 1 an 1.5 seconds? No influence, I guess, there
is nothing being received in that interval. No problem to do, either.

So, unless you come up with a clear question, I guess you will get no
answer.

Hello,

Check out http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

QSL Maker is a nice program. _Very_ simple to use without any experience on it. I made color QSLs with a photo in about a half an hour - and it didn't take three guys to do it. :-) Only thing I would like it to do is allow editing of the text in the block. But I suspect one might be able to edit one of the files in order to accomplish that. I've never been fond of the amount of effort required to do these sorts of things with a word processor, so I'm glad somebody finally did this.

Yes with a metal dome or an aluminum venetian blind or something.
It would be nice to know what would be the best other elements to use.
small dishes I guess and maybe there are dishes that have covers that can be opened and
closed with some added motor or something.

>Blocking the signal between 1 an 1.5 seconds? No influence, I guess, there

Hi all,
I bought a Yaesu G-5400 Azimuth/Elevation Rotator at Belton a couple of weeks ago with one problem.
It's missing the azimuth rotator.
I'm told that its the same as the G-500 (correct me if I'm wrong) so I'm looking to find one (a repairable one will do) without the control box.

Any help would be appreciated.

Thanks,
Jim McGhee N5FZT

When this 7percent factor is taken into account and the other gain factors what is the power at the receiver?What is a typically emitted pulse duration and duty cycle or pattern and what as a result of "fades" and "multipath" is a typical received pulse duration and duty cylcle or pattern? Is multipath used to explain pulses which dont come at the expected time or interference from out of phase pulses partially or wholly cancelling expected pulses? How bad and avoidable or minimizable is this problem?

No, it is the same as the G-400.
When the azimuth rotator is the G-600 the combo is called G-5600.

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Ralph:

You really, really need to do some serious homework before asking these kinds of questions. A good place to start would be to go to your local university library and look up the book "Radar Astronomy" by Evans and Hagfors (1968). It has a chapter on radar studies of the moon. Another reference is the ARRL book "Beyond Line of Sight" by Emil Pocock (1992) which has a chapter on EME. There are also numerous articles on EME in QST and other amateur magazines. While you're at it you should also study "Introduction to Radar Systems" by Skolnik which has an excellent treatment of basic radar theory. These are things you have to do yourself as people in this newsgroup cannot do them for you. As you will soon learn, moonbounce is not a trivial undertaking.

For What It's Worth (FWIW):

Yaesu's 3-page glossy double-sided product promo for its FT-847
"Earth Station" implicitly says it's P3 ready. In the orange
outlined box you'll find: "Now with the impending launch of the
Phase 3D amateur satellite, the FT-847 continues Yaesu's position
at the forefront of the satellite market."

So much for the bragging, but I must admit is does have numerous
features for being such a small box (with the usual HF + 6m rig
built in as well).

Overview of the orange box specs:

* Crossband full duplex operation:
Mode A (TX 2m, RX 10m)
Mode B (TX 70cm, RX 2m)
Mode J (TX 2m, RX 70cm)
Mode T (TX 20m, RX 2m)
* Dual VFOs, Receive and Transmit simultaneously displayed.
* Inverted VFO mode
* data/packet jacks for:
9600 bps GMSK, 1200 bps PSK or 1200 bps AX.25 AFSK

>I'm confused. What exactly would a 'p3d-ready' radio be/do?

What is the difference between a 'satellite ready' and 'P3D ready' radio ?

One thing I would like to see is some sort of doppler compensation, since the P3D has a mid-transponder beacon, so a secondary receiver locked to this beacon could be used to make a doppler correction for the entire received passband. While there is not much need for doppler-tracking near the apogeum on a Molnya type orbit on the lower bands, but e.g. on 10 GHz, the doppler changes quite rapidly outside exact apogeum. Such feature would also be quite useful for tracking the CW beacon for LEO satellites, with quite severe doppler even on UHF.

While it would probably be impossible to include a satellite tracker program into an 8 bit embedded processor with 128 byte RAM 4 kB ROM (as used in many radios), any 16 bit embedded processor (even without floating point instructions) to calculate the satellite orbit from 2 line orbital elements and calculate the azimuth, elevation and doppler (and use it for doppler correction) for the station, I wonder why these features are not included into 'satellite ready' rigs. Even some GPS receivers contain some orbit prediction routines, which uses the almanac for all satellites broadcasted by all satellites to calculate the first fix after _initial_ switch on (which otherwise may take quite a long time).

While some may argue, that simultaneously fiddling both the transmit and receive frequency settings is part of the fun, the downside is that stations wander around and even upon each other in the satellite transponder passband. This will reduce the number of QSOs that will fit into a transponder at one time due to the larger guard zones between stations. If more stations were equipped with transmitters correctly compensating for the doppler shift (e.g. by locking to the downlink beacon and doing the frequency transformation), more stations could use the transponder.

How "p3d ready" that is will have to be seen after the different
transponders have been tested in real operation, and a transponder schedule
has been decided upon.

Here are some additional sources of information. (Note: The amateur nets may not be active for all launches.)

Joint Pacific Area Scheduling Office
http://mocc.vafb.af.mil/launchsched.asp

This is the official Vandenberg AFB launch schedule and is usually only updated during normal working hours Monday through Friday.

Vandenberg Launch Update Line
30th Space Wing Public Affairs Office
805-606-1857

A tape recorded message regarding the status of the next scheduled launch. It isn't usually updated during the countdown or in the event of a hold.

Vandenberg Launch Net (VHF)
WB6OBB Repeater
147.000 MHz, +600 KHz Offset, 131.8 Hz PL

Countdown updates for ham radio operators and scanner listeners by way of the WB6OBB ham radio repeater west of Santa Barbara. This repeater's signal reaches from Thousand Oaks to San Luis Obispo.

Vandenberg Launch Net (HF)
3,815.5 KHz LSB

For the benefit of hams in outlying areas, a second launch net will be conducted on HF (shortwave) in the 80-meter ham band. Hams who are within range of the Santa Barbara repeater and can operate on 80-meters will pass information from the local VHF net over to this net.

No, Tom, you did NOT answer Nev's question.

He wants to know, as I do, what *schedule* of transponder operation the AM is going to commit to. The frequencies have been know for a couple of years. However, the AM either has not worked on an operational schedule, or is unwilling to release it to our membership. Thus, very few people will be ready to utilize the satellite when it is launched.

How much of the orbit is going to be dedicated to which mode? Which modes are going to be on one day or another? This makes investment beforehand (or at least planning) in the expensive equipment needed to work the satellite impossible.

So, "...Go to www.amsat.org..." gets you very, very little in terms of planning information. I hope this one does not go into another subcarribean orbit on Ariane 5.

See you on the satellite (after I have to build the equipment after I find out what modes it will be in). 73

How can anybody know until the satellite is actually in
orbit? How can AMSAT - or anybody else, for that matter -
commit to a schedule until we know that the satellite has
survived the launch and know what works and what doesn't?
And how well - remember AO-13 Mode L?

The published link budgets look really good, and the hot
ticket appears to be 1270/2400 MHz (this is what I'm planning
for, initially). But nobody can confirm that until the
satellite is actually in orbit.

There is no conspiracy here. It's just life.

Amateur satellites are not intended to be a planned service that you can
rely on, but a testbed for experiments. Furthermore, the functioning of
the different modes may not be really known until the satellite is tested
in orbit.

Look at what happened with earlier P3 sats: mode S was announced but could
not be made available until a bug was found in the software that made it
malfunction, mode L was a nice mode but the transponder failed early in the
mission, etc.

The operators also need to find out by trial-and-error how many stations
are really able to work the satellite in each mode. Of course there is
the chicken-and-egg problem that nobody will make or buy 13 or 3cm
equipment until it is clear that the transponder will be available, but
it also makes no sense to put the transponder on 3cm when there is nobody
there to use it.

So, I think you will have to expect shifting schedules, depending on the
availability of the equipment in the satellite and the availability of
stations using it. It may well be that it is on 2-70-23 in the early days,
then shifts to higher bands when more people get the feel of it.

And of course, then there will be people that bought commercial 2-70-23
equipment, don't want to upgrade, and feel "left in the cold". That is
hard to avoid, I guess...

: availability of the equipment in the satellite and the availability of
: stations using it. It may well be that it is on 2-70-23 in the early days,
: then shifts to higher bands when more people get the feel of it.

That's a safe assumption, noting that the shift to higher bands
must very slowly phase out 2-.70, if at all.

My view of the future (assuming the launch doesn't blow up) is:

In the beginning, a large number of folks will use 2-.70 SSB/CW
with something like an Arrow (with receive amp) on a camera tripod.
The alleged "all-band, all mode, 'satellite ready'" rigs could do
this today along with other older LEO satellite equipment that's
been available for years.

Questions: Exactly how much antanna gain will be needed? Will
an existing Arrow work, or will we need something significantly
longer?

The first wave of the fancier modes will come (as always) from
the the true dedicated satellite enthuisiasts. They're the only
ones with the expertise to figure out the details. But this is
no problem since they will write it up and publish it in QST, CQ
and the web.

This feeds the second wave of the true tinkerers. They know
little about satellites, but start with the early articles and
do their usual simplification and optimization engineering skills
which results in much easier to use COMPLETE (since they started
from ground zero) templates which are published in QST, CQ and
the web... A few more people build this stuff based on these
articles, but not too many until...

The third wave of ham entrepreneurs package the simplified
complete templates into kits enabling...

The fourth wave of tinkerer-wannabees who will buy the kits.
Congestion/large antennas on 2-.70 provides initial incentive.
But the floodgates will be opened as positive articles on the
best of the kits show how easiy it is to join in on the fun.

: And of course, then there will be people that bought commercial 2-70-23
: equipment, don't want to upgrade, and feel "left in the cold". That is

: hard to avoid, I guess...

Those left in the cold will be the "pure appliance operators"
choosing to wait years for big vendor equipment when inexpensive
kits are available. :-)

But it would be complete folly to completely phase out 2-.70
until cheap converter boxes are readily available to plug into
the large number of VHF/UHF rigs floating around.

It's in the interests of the future of Amateur Radio to make it
as simple and inexpensive as possible to use the satellite. We
could get alot of new hams just wanting to say "I worked the
satellite".

This is gonna be really cool :-)

Date: 1999-10-22 00:00:00 UTC
From: Gerard van Antwerpen <design@cuddon.co.nz>
Message-ID: <380F64CE.B9756659@cuddon.co.nz>
Source record: 11221

I've got given a sat. receiver and a lnb. The dish was too big to get in my suitcase :-) So now I'm looking at building a dish myself, something about 2 - 3 meters dia. Has anyone got information , or knows a site where to start looking?

Thanks for any replies,
Gerard

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Greetings Fulton..

Looks like you've got a nice unit!! However, I think at the price quoted it may be competing with Time Step's PROscan receiver:

Reference:
Scroll down until you see PROscan APT Receiver, also click on the pictures
http://www.time-step.com/apt/apt.htm

In the USA it's sold by Swagur Enterprises Inc. (joint cooperation) as illustrated at the following:
http://www.swagur.com/
On the left hand side of the screen click on APT Satellite. At the new window, scroll down and find Swagur-TimeStep PROscan Receiver. Notice the USA price.

No doubt that your receiver does indeed offer some features that this receiver doesn't. One thing that is nice about the Time-Step PROscan Receiver is there's no squelch. The scanning portion of the receiver locks up once the 2400 Hz carrier of the click-click-click sound is heard as the satellite comes over the horizon. Yours may be designed the same way..

Cheers,
Gary

After the QST article regarding the inexpensive R139 over here in the states, many folks are going this route only due to the price. Ref.: http://www.hamtronics.com/ and the receiver at: http://www.hamtronics.com/r139.html . However, this is *certainly* not to be compared to what you've got!

..SNIP..

I would think that the big 3 should consider coming out with radios that are ready for the higher download speeds expected with P3D and current sats... i.e. 38.4K ... it took forever to get radios that were 9.6K ready and now that they make those ... the Sats have progressed again... let's hear a vote for radios with changable filter bandwidths and true high baud rate input and output capability...

73,

Art

3017. Radio Astronomy Techniques

Newsgroup: rec.radio.amateur.space
Date: 1999-10-26 00:00:00 UTC
From: joseph.buch@dol.net
Message-ID: <3815b4f8.8233971@news.dol.net>
Source record: 11233

I have a copy of the Proceedings of The IRE (Institute of radio Engineers) from January 1958. This is a special issue devoted entirely to Radio Astronomy. It contains over 350 pages of technical articles reflecting the state of the radio astronomy art in 1958. There are an additional 142 pages of advertisements for such exotic things as germanium transistors which also make interesting reading.

This monster issue contains papers by such world famous radio astronomers as C. M. Jansky, Grote Reber, and John Kraus.

There are articles about early lunar RADAR experiments with speculations on the character of the lunar surface deduced from the smearing of the echos; HF radioastronomy of Jupiter; construction of interferometers and polarimeters; sky maps and radiation brightness measurements of various radio sources; using lunar thermal noise to estimate the temperature of the moon; and using radio stars to study irregular ionospheric refraction and scintillation effects..

The January 1958 issue of the IRE Proceedings is not only an important historical reference, it is a short course on the science and engineering principles which amateur radio astronomers will still find useful today.

I have no idea what this tome is worth. I would like to see it go to some young person who will learn from it, preserve it, and pass it on to the next generation when the time comes to fold your antennas. Make me an offer by e-mail and describe your intended use for the document. I will consider both the price and your intended application in deciding who gets it. If no offers are received, it will go to ebay.

3018. Help needed in designing a Trifilar Balun

Newsgroup: rec.radio.amateur.space
Date: 1999-10-26 00:00:00 UTC
From: Paul Telco <paul@telco1.demon.co.uk>
Message-ID: <940964597.10399.0.nnrp-06.9e984783@news.demon.co.uk>
Source record: 11234

Hi,

I'm using Trifilar Baluns to match QFH aerials into 50 ohm cable. Up to now I've used the dimensions used for a RIG project, both for the QFH and the Balun to go with it. However I have now built a new QFH from different materials and it has a slightly different impedance.

My question is:

Can anyone point me to details of how to calculate the wire diameter, number of turns, former material and diameter of coil for the new Balun?

The design impedance of the new aerial is 50 ohms and I'm using 50 ohm (RG58) cable. The previous baluns have had to balance and match impedance but this one will obviously only have to balance the signal.

Any help would be greatly appreciated,

Paul Telco

Since you are in New Zealand this reffernce might not be much us, but one of
the mid 1980s ARRL Satellite Handbooks had an section on building your
own TVRO/METsat dish. The TVROS would have been for 3.7 to 4.8Ghz and the
METsat about 1.6GHZ, much
lower than the 12Ghz (or so) that DBS operates on. I do remember just a
bit about the maximum errors you could have and if I am rembering correct
you must keep the errors smaller than 1/8 wavelength. These dishes where
prime focus, where the feedhorn is in to the midle of the dish, all of the
DBS dishes that I have seen have been offset and I suspect that that
requieres yet another set of magic spells. You might hunt around and see if
there is a comercial dish small enough to meet your needs, or even chop off
some of the edges of the dish you already have.
Good luck

Has anyone had good experiences with the hamtronics mini preamp LNY-450? It costs $29 and uses a low noise dual-gate MOSFET.

Supposedly it has .8 dB noise with 18 dB gain. Looks promising for better quieting when listening in to AO27.

Is there a better choice out there? This looks pretty good for the cost.

I have not used one of those, but I think it uses a MRF966 gasfet. I have built several preamps using this device an they work very well in the 2 meter and 440 mhz bands. The ARRL handbook has diagrams of them. The Hamtronics price is way too much to pay for a 3 dollar transistor and a couple of other components. If you don;t care about that money, then it should be a ok preamp.

Well, unless ham are new to the ham sats or are having problems
there's really no reason for them posting then.
There are other sats of coarse like AO-27 and FO-29's digitalker to
listen to or work. Then there's the pac-sats, the RS birds,etc.
Hang in there Ian!

Sound waves require a medium like air to propagate. Sound will not
travel through a vacuum. Deep space is as close to a perfect vacuum
as we get in the real world. Back to the drawing board.

What about the solar wind? In theory, it should be possible to modulate
the solar wind with longitudinal "audio" waves. All you need is a big
enough amplifier and a loudspeaker in space. Just a thought.

Any chance you can scan it and make it available on the web?
You might need the IRE (or whoever they've evolved to be) to
give permission. And 350 pages is no small task of course.
I might be interested in doing the scanning, over a few months.

Well, it was the easiest satellite to work that I've seen.
All my operations were done with a 2m handheld, a little brick
amp, and a groundplane antenna.. pretty simple stuff.

I don't have 70cm (even FM) to get on most of the satellites,
and haven't found anyone to talk to on RS-12/RS-15 here in VK yet.. :-(
Not for lack of trying either.

cheers

It wouldn't be sound as we understand it. The solar wind is, by
terrestrial standards, still a very hard vacuum...

It's probably also not what the original poster had in mind.
I wouldn't mind going to a school that had the facilities to
contemplate such a project. :-)

Thanks for the feedback.

It makes sense that the least cost amp is one built from the
ARRL handbook. The big advantage is that you know exactly what
you are getting. The disadvantage is that assumes you can make
a nice PC board :-)

Someone else e-mailed me an alternative to check out. Ramsey
Electronics has a kit for a similar device for $17.95. It's at
http://www.ramseyelectronics.com/cgi-bin/SoftCart.exe/scstore/hprod/pr10.htm?L+scstore+zkp
s7989+941139184

The Hamtronics product is at http://www.hamtronics.com/lny.html

It's tough to compare them because neither lists a true description
of their amplifier.

The ramsey web page says:
"Don't be misled by GaAs FET claims! The cheap dual-gate FETs
(manufactured for TV tuner usage!) used by others just don't
come close to the performance of these preamps designed with
NEC microwave transistor devices."

The hamtronics web page says:
"Unlike other FET preamps on the market, this one uses one of
the new-generation, very-low-noise, dual-gate MOS FET's which
are designed exclusively for use in the vhf & uhf bands. ...
Note that there is a recent trend to use silicon rather than
galium arsenide at vhf and uhf frequencies. New techniques
provide better noise figure than we got with comparable GaAs
FET's only a few years ago.

Some units you may see on the market use triode fet's designed
for microwave, and they are not always stable when operating at
vhf and uhf frequencies. ...

The Ramsey preamp is a PC board kit with 9 components. The
hamtronics preamp is a finished surface mount module with 18
components.

Is it RF bypassed for up to 5 watts? If not, it would be pretty
inconvenient for most HT's.

According to AMSAT, the "plan" is to operate the satellite in at least
two simultaneous modes. They announced that they expect the most
popular modes at the beginning to probably be what we currently call
mode JA (U/V) or B (V/U), and 1296/2300 MHz (L/S). Of course the best
laid plans of mice and men aft gaang awry. Any transponder failure
could drastically change this operating plan.

audio waves are physical waves in a medium such as air, not what I think
you are talking about, I think you are talking about transmitting voice
via radio waves.
This is easily done, with the appropriate transmitter, at the
appropriate frequency and the appropriate mode, ie fm, ssb, am. However,
dont think you are serious about contacting aliens via radio as any
energy source that could put out a signal that would reach another star
with detectable information would have to be on the order of the power
output of the sun. The fcc has only licensed one of these in our area.

To do the preamps it is not really necessary to do a very good pc layout. I used a small hand held grinder to cut out the copper in narrow segments. That leaves more copper on the board. It might not look very good but it works very well. If the Ramsey kit uses the same device, That is not a very bad buy especially for a one time thing.

3044. AO-10 in LEO mode [was: Blimey the effect MIR had had here !!]

Newsgroup: rec.radio.amateur.space
Date: 1999-10-28 00:00:00 UTC
From: John Mock <kd6pag@qsl-nojunk.net>
Message-ID: <87wvs629t5.fsf_-_@mongrel.kd6pag.ampr.org>
Source record: 11060

Well, unless ham are new to the ham sats or are having problems
there's really no reason for them posting then.
There are other sats of coarse like AO-27 and FO-29's digitalker to
listen to or work. Then there's the pac-sats, the RS birds,etc.
Hang in there Ian!

Well, i've been trying to work AO-10 as if it were a LEO, e.g. working
those part of its orbit where it's about as far away as FO-20, which i
have been able work fairly reliably. If you're going to do that, be
aware that it doesn't function during eclipse (such during the gap below
in Orbit 9532 for New York) and has deep fades from time to time. Unlike
FO-20, it does have a beacon, of sorts, so you can at least tell when
it's transmitting and in range for your own antenna setup. Below are
some times to try.

3045. Contract Engineer Position in Denver Area

Newsgroup: rec.radio.amateur.space
Date: 1999-10-28 00:00:00 UTC
From: "Ronald F. Bauer" <rbauer3@mindspring.com>
Message-ID: <38188F76.82AE3322@mindspring.com>
Source record: 11061

I apologize if this is not the proper forum for this, but I am looking for 3-4 skilled Engineers with 2+ years experience performing hardware/software test & integration using C/C++ and Ada. Experience with satellite or communications systems a plus. This is a long term contract position in the Denver area. Anyone interested may either contact me directly or visit our web site at http://www.ess-us.com to learn more. Thank you for your time.

Best Regards,
Ron Bauer

3046. Re: 70 cm preamp for Arrow hand-held beam

Newsgroup: rec.radio.amateur.space
Date: 1999-10-29 00:00:00 UTC
From: nomail@pe1chl.demon.nl
Message-ID: <slrn81io0t.ear.nomail@linux.pe1chl.ampr.org>
Source record: 11062

Note that there are different reasons for having a preamp at all:

1. your transceiver has poor sensitivity (a high noise level), either
because of a bad design or because it was designed very long ago and
does not use modern low-noise devices.

2. your feedline is long, and the losses in it are therefore too high.
this can be compensated by putting a preamp near the antenna.

As you are talking about a hand-held beam, I would first check if your
receiver is really so deaf that a preamp is of any use. The standard "use
a preamp" recommendation is geared towards the fixed station, that
generally has a long feedline and can have benefit from an outdoor preamp.

You mean the amateur SAREX frequencies? Unfortunately, there are no more SAREX missions. Nor Mirex. (See ISS for future space communications possibilities.....I believe AMSAT has all the frequencies on its website)

Rick T.

Here you go:
(From the Unofficial Space Shuttle Launch Guide)

Shuttle Frequencies
==========
The Space Shuttle transmits on three frequency bands: UHF, S-Band, and
Ku-Band. The UHF frequencies are simple AM voice and are very easy to
copy. These frequencies are used for launch and landing operations,
EVA operations, and as an additional voice downlink when other
channels are in use for the current ground station has no S-Band
capability.

The frequencies in use are:
296.800 MHz : Air-to-ground, or Orbiter to suit
259.700 MHz : Air-to-ground, or suit to Orbiter
279.000 MHz : Suit-to-Orbiter, or suit-to-suit
243.000 MHz : Standard military aircraft emergency frequency

The S-Band system is one of the primary Orbiter downlink bands. The
voice
channels are digital slope delta modulated and are multiplexed in with
the rest
of the Orbiter telemetry and is very difficult to copy. Much of the
downlink
TV is on S-Band also, but is wideband FM and should be easy to copy.
The
frequencies are:

2287.500 MHz - Primary digital downlink
2250.000 MHz - Wideband FM with either main engine analog telemetry
during
launch, or TV during orbit operations.

The Ku-Band system is used in conjunction with the tracking and data
relay
satellites and is used much more heavily in Spacelab flights than in
others.
The data rate is very high (50 Mbit/s). These transmissions are
directed

to TDRS satellites in geostationary orbit on a frequency of 15.003 GHz.

(Information via WA3NAN, and WA4SIR)

Ed Sileo (edsileo@qnet.com) says that Shuttle audio can be heard on 169.4
MHz at Edwards Air Force Base (EAFB). The transmitter site is on Lehman Ridge
on the east side of Edwards near the Astronautics Lab. This can be heard during
all flights since you never know when the shuttle may land at EAFB.

Shuttle Audio Retransmissions
==========
Excerpt from the Goddard Amateur Radio Club (GARC) Shuttle Retransmission Fact
Sheet (from Jim Blackwell, N3KWU, HRSBLACKWELL@deblur.gsfc.nasa.gov)

Retransmission of Shuttle air-to-ground audio from the GARC (WA3NAN) may be
heard on the following frequencies:

Frequency (MHz)	Mode	Antennas
3.860	SSB LSB	N-S/E-W Dipoles
7.185	SSB LSB	N-S/E-W Dipoles
14.295	SSB USB	3-element Yagi
21.395	SSB USB	5-element Yagi
28.650	SSB USB	4-element Yagi
147.45	FM Simplex	Phased vertical

Where SSB is Single-Side-Band and LSB, USB indicate either Lower and Upper Side
Band. A short-wave receiver possessing a Beat Frequency Oscillator (BFO) is
needed to receive these transmissions.

GARC maintains a Bulletin Board System (BBS) which is accessible by way of the
Internet, modem and packet radio. The BBS contains areas with information on
the club, mail distributed by the Amateur Satellite Corporation BB (AMSAT-BB)
listserver, SAREX bulletins and Space Shuttle mission information. During
Shuttle missions, users can also access Keplerian Orbital Elements (Keps) which
are generated by the club based on information generated by NASCOM at GSFC
(these orbital elements are read over-the-air by our volunteer operators). The

BBS is accessible by the following means:

1. Internet: telnet to wa3nan.gsfc.nasa.gov (128.183.105.17)
2. Telephone: (301) 286-4137 (up to 14.4 kbaud supported)
3. Packet Radio: WA3NAN on 145.090 MHz in DC area.

Just follow the login instructions. Note: Full access to the BBS is limited
to members of the club.

GARC also maintains a WWW Server containing a wide variety of information about
the club, its activities, as well as links to other Amateur Radio resources.
The URL address is:

http://garc.gsfc.nasa.gov/www/garc-home-page.html

Excerpt from rec.radio.amateur.misc FAQ Part 3 (modified):

Shuttle audio is re-tranmitted by the following Amature Radio stations.

Station Centre VHF 10m 15m 20m 40m 80m

K6MF ARC 145.585 7.165 3.840
W1AW ARRL 147.555 28.0675 21.0675 18.0975 14.0475 7.0475 3.5815 1.818

Source record: 11070

Greetings folks..

Along these same lines are there any folks here that have modified any of the later (inexpensive) scanners for APT reception? I'm thinking of a few of the scanners that some of the small companies are offering as 'their' receiver for APT reception. Examples include some the lower cost Radio Shack table top scanners such as the #20-419 (PRO-2049) or the #20-421 (PRO-2015). Perhaps some of the older crystal bound scanners like the old Regencies may be an option here (??).

Apparently the ceramic IF at approx. 40 kHz isn't exactly easy to come by, which would be the ultimate in the scheme of modification. Therefore, many folks are attempting to bypass the existing IF filter with simply carefully choosing a capacitor. Whether this is generally recommended or not is up in the air...

Comments & trials and tribulations regarding scanner modification for APT reception SURE welcome!

Cheers,
Gary

Anyone running the Hamtronics R139 and pleased with it as an alternative to the above?

WTD: Satellite Tracking Interface

I am presently looking for a tracking interface to
control Yaesu az/el rotators and FT-847 with Nova.

I have used the KCT/T in years past, but I would
prefer something utilizing the serial or parallel
ports rather than an ISA plug-in board.

While I do not have the Hamtronics APT receiver, a friend does. It produces mych better pictures than the capacitor for an IF filter. The capacitor coupled IF strips produce an image similar to that produced by a Pro2004/5/6 in the WFM mode. Way too wide, but it will work. And with a good enough signal (read good MOSFET preamp and a real sat antenna like a QDH)will produce pretty good pictures. The PCR1000 does a slightly better job than the Hamtonics on the same antenna and the same pass(we used a homebrew active antenna splitter that did not seam to degrade the signal.One thing to keep in mind is that a lot of the el-cheapo wireless microphones use 50KHz IFs and some can be tuned down to 137. Coupled with a decent antenna, such a setup can produce first rate images at a low cost. You can roll your own QDH antenna, and even build cheap good preamps.
The most important part of any NOAA APT satellite receive station (IMO) is the antenna/preamp/feedline.

3067. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-11-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7vki6v$p2l$1@news.hawaii.edu>
Source record: 11083
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O

Date: 1999-11-01 00:00:00 UTC
From: ds0007@medtronic.COM
Message-ID: <7vklqm$m17$1@gazette.corp.medtronic.com>
Source record: 11084

Wow, lots of constructive feedback on this newsgroup.
Much better than some of the other rec.radio.* flamefests.

Ramsey sells another kit, RFS-1, their RF actuated relay
for $14.95 which can be used to bypass up to 100 watts.

However, I use the Arrow duplexer on the antenna, so
that will offer some protection. There were no detailed
specs on the Arrow duplexer, so I guess it's time to
get out the dummy loads and watt meters to see how
much RF makes it to the 70 cm line when 5 watts is
transmitted on 2 meters.

3071. Transmissions in 137MHz band

Newsgroup: rec.radio.amateur.space
Date: 1999-11-01 00:00:00 UTC
From: Lawrence Harris <lawrence@itchycoo-park.freeserve.co.uk>
Message-ID: <KwEeOEmtytlRSMSWwU9y7fH3T2U3@4ax.com>
Source record: 11087

Anyone monitoring the 137 - 138MHz band will hear the following
transmissions:

NOAA-14 137.62MHz transmitting telemetry from polar orbit.
NOAA-15 137.50MHz as above.
OKEAN-4 (a.k.a. 1-7) transmitting occasional short bursts on 137.40MHz
SICH-1 and OKEAN-O as for Okean-4.

These signals can be decoded into pictures using hobbyist equipment.

HI again Ian,
The Apollo landing sites can't be photographed from the Earth or
even by Hubble, they don't have the resolution to do it. Clemintine
couldn't even shoot the sites well enough. The orbiting Command
modules couldn't photograph the sites either with the cameras they
had.

It really happened, every so often a nut case comes along and says it
was faked. Tell that to the THOUSANDS upon THOUSANDS of people who
worked on the missions, my uncle included.

Check out this site:

Yes, ham sat activity is pretty low right now. A working P3d, and
manned ISS should liven things up considerably, at least for awhile.

I can only say that sometimes I hear splater from overhead high altitude
aircraft responding to questions from either the fround or other,
distant aircraft. About 1 pass out of 20 or so is effected. I have
never bothered to check to see what the exact frequencies are, or which
airports /flight service centers use them. I will hunt around and see
if any local air scanner types have a bandplan that includes 136+ air
comms.
And an addtional thought, the other evening as we walked home from a
friends I was amazed to count 11 aircraft in about as many minutes.

These craft where all above 75 degrees so are farily close in well in the pattern of my QDH. I did not realize that this area of central Kentucky had that much air traffic.

The project is called 'GalaxyProbe'. We have a small team of software developers and web site designers and a little bit of funding. We want to create a theme based entertainment web site with the following functionality: Web Site visitors will have the option of sending some sort of message to a distant Galaxy through a web site interface. We will write the software to interface with the transmitting hardware. Once the user has submitted the message, it will be quede for transmission. The user can watch the count down to transmission on the web site and then track it at a later date. The purpose of the web site is to create an educational, family fun event for all ages. If you can participate in any way, please let me know.

Kind Regards.

Greetings..

Appreciate all the comments folks! The comments are sure welcome. I had heard that the ICOM PRC-1000 could be used for APT images however, until I downloaded the specifications I didn't realize that there is a FM mode with a selectivity of 50 kHz. I have come across a radio that is specifically designed for APT reception without the possibility of synthesizer phase noise sense it's crystal bound. Time-Step in conjunction with the USA connection Swagur Enterprises Inc. has got what appears as quite a scanner for APT reception shown at http://www.time-step.com/apt/apt.htm . Scroll about 3/4 down the page to see the PROscan receiver whose images can be expanded rather nicely. Still, at the price of this guy I think I may opt for the Hamtronics kit as a lower cost alternative.

Cheers,
Gary

Notice no squelch on the PROscan. Once it detects the 2400 Hz 'ping-ping-ping' from the satellite, it stops scanning and holds channel while your software paints an image.

Since this isn't really a serious communication project the transmitter
power and antenna gain can be anything you want within you're budget.
Maybe 100 mW at 27 MHz might be a good starting point. :-)

Cheers,
Lee, WA8YBT/6

It is probably just a problem in your receiver... dynamic range too
limited to receive a weak satellite on 137 while an aircraft transmits on
135.xxx directly overhead.

Here in Ottawa,Canada there is also some minor interference from ATC but
that is may be because my IF is 60 kHz wide.
What made me give up on APT is a very pesistent interference with NOAA 14
and less so with Meteor 3-5.
This shows as bursts 100 - 150 msecond long repeating at EXACTLY the APT
scanning frequency and lasting 5 -10 minutes thus rendering the picture
almost useless.
Two things are funny about this.It happens most of the time say 9 out of
10 passes.Also as I recall this started some 2 years ago; before that it
just never happened.
I know this does not help much, but since you asked...
Regards,Herb.

Maybe it is ORBCOMM? They are transmitting data from a large number
of LEO satellites in the same band.

It happens with every receiver I that I have tried including a military surplus tube unit. For a long time I thought my mosfet preamp was producing mix products, but after borrowing a spectrum analyzer and monitoring the 136 to 138 range in memeory mode, on a small rubber ducky I found that yes there are some aircraft coms there and they are almost on top of both NOAA APT freqs. More of an irritation that a real problem.

Actually, in the book I read, it was done first in 1949 by the Army,
using 400 MHz and a massive collinear array. I don't remember the
actual ERP used. No intelligence was sent, just a cw pulse that was
monitored on a scope for the return path.

Hello,

I was wondering, what equipment is nessecery to communicate with a lander on the moon? All the radio equip can not be more than 200 lbs, and there can be no parabolic dishes (on the lander). It has to be able to receive commands clearly and transmit video clearly. The equip. back on earth can be whatever size it needs to be. If you are going to ask what for, it is a long story and you wouldn't beleive me :-). Thanks!!!

When you need to ask here, we are not even going to ask you what for.

We have experienced a recent influx of people asking how to do things
that are only useful as a thought experiment, so your posting really
doesn't stand out.

Greetings Glenn..

Appreciate the reply! I suspect that if you get this receiver tuned, it should be a hot little performer if it's providing this kind of service without even being entirely tuned up! I'm curious what your using for software - possibly WxSAT ? Do you find that the satellites break the squelch and keep it broken long enough to provide a consistent image? The important last question is what antenna have you settled with that provides you with a good clean image overhead at 137 MHz?

Cheers,
Gary

Gary, I am using WxSat. My antenna is a homebuilt quadrafiler (sp) built with a length of 4" drain pipe for shape, six lengths of dowel, some rg58 coax and hot glue. This antenna is great! There are plenty of websites with plans and once you get the twist and the wiring figured out the rest is easy.

3100. moonbounce collaboration wanted

Newsgroup: rec.radio.amateur.space
Date: 1999-11-05 00:00:00 UTC
From: ralph sansbury <sansbury@bestweb.net>
Message-ID: <WmJU3.2608$J55.148617@monger.newsread.com>
Source record: 11016

I posted this here before and got some replies and links I could
partially understand but
not a clear answer.
Let me try again. Is there someone out there with the necessary equipment
to bounce a signal of length .2 seconds long say off the moon and to receive
it x out of y times and such that a shutter could be put over the antenna
that could be rapidly closed 1.75 seconds after emission so that it would be
completely closed say 2.3 seconds after emission. If a 9 foot diameter dish
antenna or less is feasible then it may be possible to construct a simple 2
door cover for the dish that could slide closed in half a second.
The point of doing this would be to see if the receiving antenna having
been exposed to the reflection of the signal from the moon but blocked
before the signal supposedly reached the antenna would actually respond to
the signal to the same degree.
I found that this sort of thing occurred with 20ns pulses of laser light
which traveled 34 feet to a photodiode which was exposed to the photodiode
during the 20ns time interval of emission of the pulse but then blocked for
the 14ns left of the 34ns travel time(a foot per nanosecond) after the
beginning of the emission of the pulse.
So if there is some moonbouncer out there who has been successful with a
9 foot diameter dish or less that would like to try something different, let
me know by email only.

Greetings Larry, others..

I trust that you realize that the narrow band FM reception of the typical scanner is far too narrow for APT reception. Ultimately your going to need a 40 kHz IF bandwidth for optimum APT imaging. While modifying a scanner is certainly being done, coming up with a 40 kHz ceramic IF filter is easier said than done. Many folks are removing the existing IF and trying to bypass it with a disc capacitor. While this is certainly not recommended for most cases, it has been used successfully. If you do a Search with your favorite browser on APT reception or just APT you should be able to find some sites that detail this. A couple of sites that I can refer you to are:

http://www.time-step.com/apt/apt.htm

And the USA representative
http://www.swagur.com/
Click on APT Satellites on left side of screen.
Also notice Weather Satellite Overview on left side of screen.

Another comprehensive site that is quite large is http://ourworld.compuserve.com/homepages/HFFAX/ . Don't be discouraged by occasional dead links. Although the web master should keep up with them the site is extensive enough that you can usually find another link that will provide the same information you were originally seeking. Notice on the left side a section named WX Satellite.

If you haven't downloaded the program WxSAT yet, you may want to try this program out once the RF situation is straightened out. This program allows you to patch audio from your receiver into your computers sound card. The WxSAT program does the rest. It decodes and displays both the USA NOAA birds and the Russian Meteor and others such as Okean/Sich birds too. A good explanation and demonstration can be found at http://ourworld.compuserve.com/homepages/HFFAX/toc20.htm which is the same root URL that was given above. The price is right, it's absolutely free.

It should be stated that it's nearly impossible to put too much attention into the antenna system. I've been told from a couple of different sources that IF you really want good images, a preamp IS a must. This combined either with a turnstile or a quadrafilar helix antenna should provide some good APT images.

Have fun! It's neat to see images from space!

Cheers,
Gary

I'm looking at the PROscan receiver (Time-Step - above) or possibly the Hamtronics R139 as an alternative for those that like to build their own http://www.hamtronics.com/r139.html . Haven't made up my mind yet.

Greetings John..

Hopefully you don't put an apostrophe 's' behind 73 while on CW.
Most amateurs don't do this. A quick review of the history of
seven-three will verify that this makes no sense.

Cheers,
Gary

Slight correction..

Hey!

While mobiling around, and working those rare DX stations, I have found it rather frustrating to scramble for paper and pen. I don't have an easy way to install a laptop in the car, either.

So, I thought, "I can use my Palm Pilot" and create a memo. But that was a bit of a pain. What to do?

Create a log program! That's what I did. It is now version 0.1 -- and works ok.

You have a Palm Pilot? Wanna use this logger? Come download the free Application at:

http://hfradio.org/softdown.html#hflog

I have been using it during my jaunts. Helps. It is very simple, and very basic.

Send comments to: hflog AT hfradio DOT org (you can figure out the address)

In other news: The NW ARRL (Northwest Section of the ARRL) website is now hosted at http://hfradio.org/nwarrl/ - and I have been appointed as new Webmaster. If you are in the NW, and have updates, etc., please let me know. If you are interested in the NW Activity, etc., come check it out.

Also, I am still offering free websites for HAM and SWL sites. Want to make your own page? Come and fill out the form.

Don't forget: http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you

are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Greetings Glenn..

Have you had a chance to compare the quadrafilar helix antenna to the less costly turnstile antenna? I've been suggested to go with a preamp in either case for truly good images. There seems to be quite a divided camp amongst people who prefer one over the other. One individual in the alt.talk.weather group stated that he has had MUCH better results from turnstiles than with *any* other type of antenna. He proceeded to mention that he had tried the quadrafilar too.. Don't know what to make of this..(??). In any event, I'm considering either the Hamtronics kit or going hog-wild with the Time-Step PROscan receiver from England (not cheap). One individual out on the west coast replied to a post I made in alt.binaries.pictures.weather with an image that absolutely are the best images that I've ever seen from a home based APT station. What was he using? The Time-Step PROscan receiver and the Quorum TS-137 which, is now longer made despite the web site still showing it.

If you'd like to see one of the images I'm referring to, advise and I will upload it here..

Cheers,
Gary

Radio Meteor Observation Bulletin No. 75 November 1999

1. FORWARD SCATTER METEOR OBSERVATIONS
B
Observer: Enric Fraile Algeciras
Location: Paseo Bonanova, 8 Barcelona (02 07'E, 41 24' N)
Frequency: 48.24715 MHz.
Transmitter Location: still working to identify, possibly South German C2,
100 kW, horizontal polarisation)
Antenna: 6-element Yagi 617-6B, 14 dBd gain.
astronomical azimuth 215 deg (=NE), elevation 0 deg.
Antenna: Six element Yagi 617-6B, 14 dBi gain, horizontal polariz.
Azimuth 200 deg (NE), elevation 20 deg
BReceiver: home made converter 20 dB gain, 1 dB noise and Kenwood TS-830S.
10 dB attenuator in the receiver to reduce direct reception
Sensitivity: 0.25 uV for 10 dB S/N
Observing method: the audio signal of the video carrier is received using
a narrow CW filter (500 Hz) and fed into the PC in real time.
Data sampling system: using a super 14 bits A/D card to PC/XT
and "Data Capture" software with 1 second/18 sampling interval
to store all the > 0.5 s reflections.

BUncorrected hour rates of long-lasting reflections > 1 second on
October 8 per 30-minute intervals.

Hour rates starting at UT:

16h00m 16h30m 17h00m 17h30m 18h00m 18h30m 19h00m 19h30m 20h00m 20h30m

---

12 20 14 16 22 22 16 14 16 12

Notes:
it seems plausible that low-level activity of the Giacobinids/Draconids
is observed by forward scattering of radio waves in the period 16h-21h UT
on October 8, 1999.
the total number of reflections gives no indication of any shower activity.
Only the long-lasting reflections > 1 second on October 8 in the period
16h-21h UT rose significantly above back-ground level.
the duration of the long-lasting reflections was in the order of 1-3 second,
almost equal to the outburst in 1998. Reflections lasting longer than 7
seconds were very rare.
maximum activity of the long-lasting reflections occurred at approximately
19h UT around Solar Longitude 1950.06 (J2000) almost at the
same solar longitude as observed for the outburst in 1998 (1950.075).
B

Peter Bus

Observer: Maurice De Meyere
Location: Deurle, Belgium (3 37' E, 51 00' N)
Frequency: 66.51 MHz
Transmitter locations (all stations of more than 10 kW):
66.35 MHz, Klaipeda, Lithuania 12 kW, 05h00-22h00
66.47 Viesintos Lithuania 12 05h00-22h00
66.62 Budapest Hungary 100 24hrs
66.68 Valmiera Latvia 20 04h30-22h00
Antenna: crossed Yagi (x form), 4 elements, astronomical azimuth 270 deg
(= E), elevation 27 deg.
Antenna amplifier: 25 dB max level 90 dBmuV
Receiver: commercial, Progresson 447A, TESLA (Bratislava)
The receiver was calibrated with a Marconi TF2008 signal
generator. Sensitivity: 5 muV (modulation frequency
1000 Hz, frequency sweep 38 kHz) at (S+N)/N = 20 dB.
SWR of antenna alone at 66.5 MHz: 1.4/1 (good to very good),
measured with MFJ/259P SWR analyzer (HF-VHF 1.8 MHz to 170 MHz)
on Sep 28, 1998.
Observing method: automated setup, 150 samples/second, 8 bit resolution.
[Time and details of all individual meteor reflections are stored
on file in the University of Ghent format (Prometeos), and are
available for further analysis. Reduction software for DOS and

Windows available].

Oct | UT
```

Notes:
. ? probably affected by sporadic-E, tropo, direct reception.
. * warning for relative high number of long duration reflections,
an indication for potential stream activity.
. local time = UT + 2 hours
. change to winter hour on Oct 31, 2h UT (local time = UT + 1 hour)

Maurice De Meyere

Location: Astronomical Observatory, University of Ghent, Belgium
(ED50 coordinates: 3 42' 32" E, 51 01' 25" N)
Antenna (2x): 4 elements horizontal Yagi, pointed East, elevation= 20 deg
Antenna amplifier: 10 dB gain
narrow band resonance lambda/4 antenna filter
Frequency: (1)=66.29 MHz (signal) and (2)=65.3 MHz (interference control)
Receiver (2x): modified commercial FM receiver
Data acquisition: 12 bits PC-based A/D convertor, 250 Hz sampling rate
Interference rejection:

B dual setup: receiver (1) tuned at distant transmitter, receiver (2)
tuned at empty frequency. Anti-coincidence measurement rejects
registration of broadbanded spurious signals (lightning, computers,
ignition motors, etc).
Further information:
see WWW page (additional info + observational data)
http://allserv.rug.ac.be/~hdejongh/astro/meteor/meteor.html
Data format:
results are shown as total reflection time, expressed as
a percentage. The actual number shows 10 times this value.
When no figure is shown, the equipment was either out of service,
or results could have been affected by interference, sporadic-E.

Notes:
. rather quiet month regarding regarding interference
. good Orionids activity between Oct 23-25

Pierre De Groote

Observer: Werfried Kuneth
Location: Ferndorf, Austria (13 37' E, 46 45' N)
Antenna: 2 element Yagi, direction southeast, no elevation at 1 m height.
Receiver: IC-706 at 53.76065 MHz, CW-R mode, 500 Hz CW filter, fast AGC.
Transmitters: 1) 30 kW TV video carrier from Bari, Italy, distance 700 km,
B direction south and 2) a 30 kW TV video carrier from Sicilia,
Italy, distance 900 km, south. The total echo power of both
transmitters is processed into same 40 Hz virtual
receiver channel.
Observing method: automatic setup using FFTDSP42t software by AF9Y to record
the audio signal. 20 channels of 2 Hz width are used for meteor
identification, another channel is used for automatic
interference rejection. Sampling interval: one 4096
point FFT every 0.5 seconds.

The monthly results showing the total reflective time are now also
available at http://www.qsl.net/oe8fnk this includes now also Es, FAI
and fireball statistics.

The meteor counts below are corrected for a full hour observing time. If the recording duration is 20-40 minutes, a dot is shown after the value, to show the reduced accuracy. Results for less than 20 min. observing time are excluded.

Counts of reflections longer than 6.5 seconds, assumed to be overdense.

Note:
. lightning noise (&) on September 2, 9, 13, 14, 15, 16, 17.

R.B. Minton

Observer: Sadao Okamoto
Location: Damine Meteor Observatory, Japan (137.53 E, 35.07 N)
Transmitter: HAM beacon (JA9YDB) for RMO (50 W CW, 53.7500 MHz) by
JA9BOH Kimio Maegawa. No modulation except for identification.
Antenna: 2 element Cross Yagi 4 dBi aiming to Zenith. Omni-directional
in azimuth and elevation above 15 deg elevation.
Location: Fukui-NCT at Sabae city (136.2 E, 35.9 N)
At present time about 10 observers are listing for
Kimio Maegawa's 53.75 MHz beacon.
Receiver: IC575
Antenna: 2 element Yagi, pointed to the zenith.
Observing method: FFTDSP software, manual count.

Hourly echoes over 10 dB SNR

Notes:
. short Giacobinids outburst was observed on Oct 9 from 9h UT to 12h UT.
in Japan both visually and by radio observation.
-: lost counts because of high noise level or machine failure.
@: hourly rate estimated by effective observation time less than 60 min.
n: contamination due to radio noise or interference.
e: contamination due to sporadic E opening.
f: no data available due to TX or RX failure.
JST = UT + 9 hours

Sadao Okamoto

Observer: Garfield Tsao (BM2EQB)
Location: LonTan Observatory
LonTan, TauYan, Taiwan R.O.C. (121 14'37" E, 24 52'54" N by GPS)
Frequency: 50.0169 MHz USB mode 3 kHz width.
Antenna : Comet made 50MHz Yagi HB 4 element (gain 10.3 dBi)
astronomical azimuth 225 deg (=NE), elevation 7 deg.
Transmitter: MIYAZAKI University Japan, USB mode, 50 W (24 hours),
distance about 1125 km from Lon Tan.
Receiver: Icon PCR-1000 computer controlled all band receiver
Sensitivity: 0.25 uV for 10 dB S/N for USB mode
Observing method: the beacon 880 Hz voice signal (by FFTDSP) is received
by a low frequency filter (880 Hz) and fed into the D/A converter
and computer in real time.
Data sampling system: using an 8 bits A/D card to PC/AT and Qbasic program
with 1/8 second sampling interval to store the> 1.0 s reflections.

Notes:
. "E" mark= E layer propagation and E layer sporadic of reflection.
. echo lasting longer than 60 seconds on Sep 19, 5h35m UT

Garfield Tsao

Observer: Ilkka Yrjola
Location: Finland (26 35' E, 60 54' N)
Frequency: 88.8 MHz ?
Receiver: Salora SRP-22 modified, narrow band FM (B=15 kHz)?
detected signal level >-122 dBm.
FM detection, no pulse noise rejection required.
Antenna: 2-el. Yagi, G=4 dBd to SW, azimuth 45 deg (SW), polarisation H.
Data sampling system: threshold triggering, sampling rate 32 ms.
Computer logs total hourly elapsed reflection time, number of
triggers for the hour, the longest time the signal was
continuously above detection level for the hour.
Data on major showers available in the Compact MS-Soft format.
Software for viewing available from
www.saunalahti.fi/~oh5iy/radio50.zip (754 K).

Receiver: Bearcat UBC 177 XLT scanner, sensitivity 0.3 microVolt
Observing method: listening by headphone

Draconids including sporadic meteors

October 8, 1999

| n | spor | Fobs
UT | weak moderate strong > 5 s | weak moderate strong > 5 s | (%)
------+---
16-17 | 18 7 0 1 | 9 6 1 0 | 0
17-18 | 5 7 0 0 | 9 6 1 0 | 0
18-19 | 7 10 1 0 | 10 6 1 0 | 0
19-20 | 11 13 2 0 | 12 7 1 0 | 0
20-21 | 19 12 4 0 | 13 8 2 0 | 8
21-22 | 19 8 2 0 | 14 9 2 0 | 36
B
The numbers (n) are hourly rates, corrected for reflection time and breaks,
and including sporadic meteors.
The sporadics (spor) were observed during several years since 1995.
The levels are adapted to recent counts of sporadic meteors.
Fobs is the Hines' observability function.
Draconid activity can be recognized by the increase of the moderate and
Bstrong reflections, and the collapse of the weak reflections, even during
the interval of time when Fobs = 0.

Wim Zanstra

2. ABOUT THE RMOB

The RMOB is an independent initiative of some workers in the field of radio meteor scatter observations and data reduction. It started in August 1993 in order to spread rapidly the Perseid results via E-mail. Since then, it has appeared monthly, and it has gradually been expanded. In regularly publishing summaries of observations, potential radio observers are kept up to date of existing installations, possibilities and limitations of radio meteor observations. In the long run, there should be sufficient observing stations to cover the whole globe, allowing to detect stream outbursts which may remain unnoticed visually.

RMOB contains typically: summaries of recent observations, equipment data, first results of stream activity by radio methods, relations between radio and optical meteors, references to other publications in the field of meteor astronomy and radio scatter techniques, announcements of meetings, short questions and answers, non-commercial (second hand) sale of radio equipment, available software.

Contributors are mentioned, and interested persons are asked to contact them directly.

RMOB can be copied freely in unabridged and unmodified form. Extracts should indicate the source (Radio Meteor Obs Bulletin, month and year).

If you want to subscribe (or un-subscribe) to the E-mail distribution list, please send a message to C. Steyaert.
Those not having access to E-mail can obtain a printed copy free of charge from J. Van Wassenhove (current or back-issues).

3. ANNOUNCEMENT: New radio-meteor detection software available

Dear Radio-Meteor observers,

I have just put up a web site describing R_Meteor which is an implementation of the method described in the Feb 1999 issue of WGN for detecting meteors by radio scatter but using a PC + soundcard instead of a dedicated digital signal processor.

Meteors are detected and displayed on a PC using fast fourier transforms of the audio signal recovered from a comms receiver tuned to an over-the horizon HF broadcast transmitter.

Check http://sapp.telepac.pt/coaa/r_meteor.htm for more details.

The software can be freely downloaded. The context-sensitive help file describes the method in full.

I finally listened to liberty net (3950 khz) this last weekend. The only people who are Dumber than the check-ins are the people who are wasting time jamming it. You might rename it to DUMB & DUMBER net. These guys clearly spend too much time listening to Art Bell and Chuck Harder.

Have a nice day, idiots!

I love the Liberty Net...I love all the jammers that jam it. They are all
together in one or two places on the band. What would be bad is if all the
jamming spread out...a jammer is a jammer...thats how they get their kicks.
If the net wasn't there they might just bother me.

What ever a person thirsts for; some one, some group, some religion,
some business, has a drink. Many create the thirst in order to *sell*
the drink. There are a lot of thirsty people in the world. Nothing to
be amazed over, pretty basic stuff.

The best things in life are free and ungoverned. Right now I need a
cold Bud. Toot'a'loo.

You need to obtain a satellite tracking program (such as Traksat)and
then learn to use Keplerian elements, which is no big deal. I once ran
across a web site that would calculate a pass for you online, but I
don't remember where it is anymore. Maybe someone on here knows? But
why not just get savvy on satellite tracking? Its no big deal, and it
can be fun.

3125. Is pre-metero scatter possible ? 30-32mhz ?

Newsgroup: rec.radio.amateur.space
Date: 1999-11-10 00:00:00 UTC
From: EAVESDROPPER <ian@eavsdropper.dabsol.co.uk>
Message-ID: <FBjW3.36748$5P2.132367@wards>
Source record: 11041

I am curently monitoring very strong U.S signals (one mentioned arlington) on our cordless phone frequency's (and mostly between 30-32 mhz fm signal +9 fully quiet on occasion, is it possible for phenomina to occur just before a forecasted meteor shower (tommorrow).

This is the first time i have ever heard this so strong on this freq, i am using a 24ft imax solorcom2000 for this frequency and an AR5000+3. it appears to be the spot frequency for these signals and not imaging or anything else ?.

anybody else ?

cheers

It is doubtful that it has anything to do with the meteor shower. The
sigs from them will only last a few seconds each.
I have not figured the distance, but I don't think it is possiable to
get from the UK to the US via meteor.
As the sun is in the upswing of the 11 year cycle the higher
frequencies will start comming in at long distances. Most likely you
are hearing just reflections off the ionosphere.

The solar flux is quite high at the moment (yesterday) so your reception
is almost certainly just due to enhanced VHF propagation from the higher MUF.

Moving along this vien of thought...back in the late 1950s there was a
"hi-fi" speaker system called the "ionaphone"(or something real close..I was
only a kid and it has been a long, long time since I read the Popular
Electronics write up)that used a fairly high power 27MHz(or should I use MC
for historical purpose?)to either make an ion or or plasma stream that was
modulated with music. Sipposed to sound very good and also wiped out the
then 11mtr ham band something awfull. Someone, somewhere must have one of

these beasts that they could sell these folks. OF course I doubt it it ever received "part 15" type accetance.
There are also some "industrial" and medical freqs that where(are?) used for RF heating. Like paper or wood drying or "deep heating (bone) joints".
One of those might work.
<Flame bait ON!>
Or just let them operate on the 80MTr ham band, last time I checked there was not a sign of intellegence down there.<g)

Many years ago I went to the trouble to build a low band Yagi in an
attempt to catch the BBCs lower VHF channels. It worked very well,
even to the point where we could watch BAD video(moded a US BW TV
receiver). The signal acted the way you discribe, real good, then poof
its is gone. Have heard it many times in the 25 to 50 (altho these
days the 25 to 30 part is over run by "free banders")band. Lots of
European and SA pagers around 30 also behave like that.
This was in the pre-scanner (mid 1960s) days and I used a US Milsurplus
25 to 50 or 60MHz transiceiver. The beast ran from a +24V driven
dynamotor and was great fun. B+of several hundred volts and knocked my
but off trying to decipher where to tape the IF. If had WFM audio demod
and I had to use my Heathkit SW to liten to the AF. I was dispointed
when the BBC abandoned the lowe band TV freqs!.

It was more curious today, No U.S phojne just russian !, i t was a mix of radio-phone patch, phone to radio and radio-radio all over the band, i must track this down to the actual users of this as it has really got me curious, it is still sporadic but very clean and clear at times.

thanks

ian k.

a person sent me this (thanks) so i thought i would pop it in here for all my radio buds incase you have not seen it !(binary graphics removed)

VBS/Bubbleboy Help Center

VBS/Bubbleboy is a new Internet worm, discovered 11/08/99. AVERT has assigned it a LOW risk assessment; it has not appeared in the wild.
VBS/Bubbleboy is a NEW type of worm: Unlike previous worms transmitted through email, this new type of worm does not come as an executable attachment. Instead, VBS/Bubbleboy infects PCs as soon as the transmitting email message is opened. This is a VERY significant innovation! In the past, it was not possible to contract a virus or worm merely by opening and reading an email message. This is no longer true, and VBS/Bubbleboy marks the beginning of a more dangerous computing environment.

VBS/Bubbleboy is transmitted through an email message with the subject heading "Bubbleboy is back!" It will ONLY infect PCs running Windows 98 with Internet Explorer 5 and Outlook or Outlook Express. PCs using Outlook are infected upon opening the email message, while Outlook Express users may be infected by viewing the message with Outlook Express's "Preview Pane" feature! When the email is opened, the worm creates a file called UPDATE.HTA. The next time the PC is booted up, the worm sends itself embedded in an email to EVERY address in EVERY MS Outlook address book on the local system. It does this only once.

a.. Get detailed info on how VBS/Bubbleboy works
b.. Scan now for instant detection and removal (requires McAfee Clinic subscription. Sign Up for a 14-day FREE trial subscription!)
c.. Get the EXTRA.DAT file (bubb-4.exe) for McAfee VirusScan 4.0.25 and above to add detection capability for VBS/Bubbleboy
d.. Download Microsoft's patch for Internet Explorer 5
Notes on detection, removal, and protection:
VirusScan Online (Scan Now and ActiveShield) has been updated to detect VBS/Bubbleboy.
VirusScan 4.0.25 and above require the EXTRA.DAT (bubb-4.exe) in order to detect VBS/Bubbleboy.
Microsoft has issued a patch for Internet Explorer 5 that will prevent the worm from executing under default security settings.
If the worm is detected before it has sent itself to your address book contacts, you should find and delete the file UPDATE.HTA. If the worm has already sent itself to your contacts, you should do nothing; the worm will not do anything further, and your PC is now effectively inoculated against re-infection. To protect your system against infection, disable Windows Scripting Host by following these steps: Click the Start button, Settings, Control Panel, then select Add/Remove Programs, then select the Windows Setup tab, then double-click Accessories, scroll down to Windows Scripting Host, and uncheck the box. Save changes and close the window.

a.. Purchase McAfee VirusScan 4.03
b.. Purchase the McAfee VirusScan Upgrade Maintenance Plan, and never get caught with an out-of-date version!
regards

A friend who lives out in the boonies has built a log-perodic antenna
that should cover form 25 thru 100 MHz. He is finding all sorts od
wierd propagation. Like strong russian coms to our southwest. It is
clear that these commns do not follow the standar great circke path.
We are in central Ky(38N84W) so there are no known russian enclaves to
our southwest. Theses comms will go for hours and then poof gone like a

light switch was thrown.
Good luck in tracking down your unknowns!

Missed the original post......but whoever made it : keep doing it.
The smartarses don't need to be warned of these potential problems but
the ordinary punters do.
With a bit of luck, the smartarses will be spending the next few weeks
getting their systems working again.
Brian WE
Things will get better....when they finish getting worse.

Just wondering if there were any good resources for meteor scatter
operation. Are there any special procedures to be used for SSB comms?

I am hoping to make a couple of contacts, and noticed that alot of
people online were talking about meeting at 147.585, and I have never
seen any resources pointing to this freq before.

The current plan is to operate USB near 144.2-144.3 range. Any suggesstions?
Am I way out of line here?

Also, would I be better off sticking with a horizontal polarization, or
should I stick with my satellite antenna?

3158. Tracking System Reccomendations

Newsgroup: rec.radio.amateur.space
Date: 1999-11-16 00:00:00 UTC
From: "Christopher W. Buckley" <cwbuckle@mtu.edu>
Message-ID: <80slj3qhd1@campus3.mtu.edu>
Source record: 10974

Hello all!

I was wondering if anyone could reccomend a satellite tracking system to me, that will interface with rotors not originally intended for interfacing. I am thinking about setting up an automated system, so I can let the computer handle the rotors for awhile.

My requirements are:

Able to interface with existing software (Wisp) or has other commercially available software that can be used.

Able to control separate azimuth/elevation rotors with only minor circuitry design required. (I'd rather not have to design a microprocessor based interface or anything, but a simple control circuit isn't too much to ask of my time)

Other pluses would be:

Doesn't disable manual operation of rotors.

Conforms to some standard that will make it compatable with any future upgrades.

Able to interface with radio so signal strength can be used to fine tune tracking when rotors / keps / etc. need alignment.

Any help you can give me, even if it is just some names or links I can use to research the problem, would be greatly appreciated.

Thanks,

Chris

Go to www.amsat.org in the files section and download Fodtrack or maybe is is Fodtrak. YOu should not have any trouble in finding it. It is a simple tracking program that also has a very simple control circuit operating off the parallel port of a computer. YOu should be able to adapt this concept to what you want to do. Just need to have a pot on the antennas where you can get a 0 to 5 volt signal and put in a couple of relays. I have the system set up for the Yeasu rotator and it works fine for automatic tracking. Don't have the radios to do the frequency tracking so can't asy how well it works for that part, but it is suspost to chase the doppler shift for certain rigs.

I sometimes use this program in windows to track the sats with the antenna and run another program for the fancey graphics at the same time.

Knight Industries
Newsgroups:
alt.shenanigans

A few days ago, i discovered this article within a newsgroup. This article
assured me I could wasily make thousands of dollars within weeks. The
article stated that all I had to do to get these results was send $1.00 to
each of the six names given within the article. I would then add my own
name and address at the bottom of this list (at position number 6) and post
the article in a minimum of 200 newsgroups. By the way, there are thousands
of newsgroups.

So after thinking it over, and talking to a few people first, I thought
about trying it. I figured what have I got to lose except 6 stamps and
$6.00, right?

Like most of us I was a little skeptical and a little worried about the
legal aspects of it all. So I checked it out with the US Post Office
(1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $6.00...plus postage... well GUESS WHAT!!...
within 7 days, I started getting money in the mail! I was shocked! I still
figured it would end soon, and didn't give it another thought. But the
money just kept coming in. In my first week, I made about $20.00 to $30.00
dollars. by the end of the second week I had made a total of over $1,000!
In the third week I had over $10,000.00 and it's still growing. This is now
my fourth week and I have made a totoal of just over $42,000.00 and it's

still coming in rapidly...

It's certainly worth $6.00, and 6 stamps, I spend more than that at McDonald's!

Let me tell you how this works and most importantly, why it works... so,

make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

Step 1:
Get 6 separate sheets of paper then write the following on each: "Please

put me on your mailing list."

Now get 6 US $1.00 bills (or equivalent in your local currency) and place
ONE inside EACH of the 6 sheets of paper so the bill will not be seen through the envelope to prevent thievery. Next, place on paper in each of
the 6 envelopes and seal them. You should now have 6 sealed envelopes, each
with a sheet of paper stating the above phrase, your name and address, and a
$1.00 bill. What your are doing is creatign a service by this. This is absolutely legal! Mail the 6 envelopes to the following addresses:

#1 Kevin Brooks
PO Box 309568
Denton, TX 76203

#2 Yaw Bonsu
1113 Abrams Rd #174
Richardson, TX 75081

#3 Karina Gomez
10770 NW 40th St
Sunrise, FL 33351

#4 T. Smith
2769 Jester Lane
Columbus, OH 43231

#5 S. Moss
13803 108th AVE NE
Kirkland, WA 98034

#6 O. Salinas
P.O. Box 270962
Dallas, Texas 75227-0962

Now take the #1 name off the list tha tyou see aboe, move the other names up
(6 becomes 5, 5 becomes 4, etc...) and add Your name as number 6 on the list.

Step #: Change anything you need to, but try to keep this article as close
to original as possible. Now, post your amendee article toa t least 200
newsgroups. Remember, there are tens of thousands of newsgroups and more

are being added every day! All you need is 200, but the more you post the
more money you make!

That's it! all you have to do is jump to different newsgroups and post away,
after you get the hang of it, it will take about 30 seconds for each
newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!!
BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within
day's! You may eventually want to rent a PO Box due to the large amount of
mail/money you receive. If you wish to stay anonymous, you can invent a
name to use as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT

P.S. Don't know How to post in the newsgroups? Well do exactly the
following
below:

DIRECTIONS - HOW TO POST TO NEWSGROUPS
1. You do not need to re-tup this entire letter to do your own posting.
Right mouse click somewhere in this document and then click on
"select-all". At this point the entire letter should be highlighted.
Then,
from the
'edit' pull down menu at the top of you screen select 'copy'. This will
copy the entire letter intot he computers memory.

2. Open a blank 'notepad' file and place your cursor at the tope of the
blank page. From the 'edit' pull down menu select 'paste'. This will
paste
a copy of the letter into notepad so that you can add your name to the
list.
Remember to eliminate the #1 position, move everyone up a spot
(re-number
everyone else's positions), and add yourself in as #6.

3. Save your new notepad file as a .txt file. if you want to do your
posting in different sittings, you'll always have this file to go back
to.

(NETSCAPE USERS)
1. Within the Netscape program, go to the pull-down window entitled

'Window', select 'Netscape News'. Then from the pull down menu
'Options',
select 'Show all news groups'. After a few moments a list of all the
news
groups on your server will show up. Click on any news group you desire.
From within this news group, click on the 'TO NEWS' button, which should
be
in the top left corner of the news groups page. This will bring up a
message box.

2. Fill in the subject. This will be the header that everyone sees as
they scroll through the list of postings in a particular group.

3. Highlight the entire contents of your .txt file and copy them using
the same techniques as before. Go back to the news group 'TO NEWS'
posting
you are creating and paste the letter into the body of your posting.

4. Hit the 'Send' Button in the upper left corner.

(INTERNET EXPLORER USERS)
1. Go to news groups and select 'Post and Article'

2. Fill in the subject. This will be the header that everyone sees as
they scroll through the list of postings in a particular group.

3. Highlight the entire contents of your .txt file and copy them using
the same technique as before. go back to the news group 'TO NEWS"
posting
you are creating and paste the letter into the body of your posting.

4. Hit the 'Send' Button in the upper left corner.

(E MAIL USERS)
1. Start by e-mailing people that you know personally.

2. Go to any e-mail database and search under e-mail addresses. (There
are thousands of them!) E-mail everyone that you can.

THAT'S IT! All you have to dod is jump to different news groups and post

away, or e-mail it and after you get the hang of it, it will take about
30
seconds!

THE MORE YOU DO , THE MORE MONEY YOU WILL MAKE
That's it! You will begin receiving money from around the world within
days! Again, you may eventually want to rent a PO Box due to the large
amount of mail you receive. if you wish to stay anonymous, you can
invent a
name to use, as long as the postman will deliver to. Now the Why part:

Out of 200 postings, say I receive only 5 replies (a very low example).
So

then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make and additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 news groups with my name at #1 and if still 5 persons per 200 news groups react I will receive $15,625.00! With a original investment of only $6.00! AMAZING! And as I said 5 responses are actually VERY LOW! Averages are probable 20 to 30! Let's put those figures at just 15 responses per person. Here is what you will make:

at #6 $15.00
at #5 $225.00
at #4 $3,375.00
at #3 $50,625.00
at #2 $759,375.00
at #1 $11,390,625.00

When your name is no longer on the list, you just take the latest posting in the news groups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6.00 and see if it really works?? I think so...

People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and news groups everyday and are willing to give it a try? Estimates are at

20,000 to 50,000 new users, every day, with thousands of those joining the
actual Internet. Remeber, play FAIRLY and HONESTLY and this will work. You
just have to be honest.

Make sure you print this article our RIGHT NOW, also. Try to keep a list of
everyone that sends you money and always keep an eye on the news groups to
make sure everyone is playing fairly. Remember, HONESTY IS THE BEST
POLICY.

You don't need to cheat the basic idea to make the money!

GOOD LUCK to all and please play fairly and enjoy the huge rewards from
this, which is tons of extra CASH.

3162. Balloon Launch

Newsgroup: rec.radio.amateur.space

!

http://www.leonidslive.com/
The balloon is scheduled to lift off from the The Atmospheric Research Facility (ARF) on the Marshall Space Flight Center (MSFC) Campus in Huntsville, AL at 0130 EST on Thursday, November 18. It will climb to a maximum altitude of approx. 105,000 ft in 200 minutes, followed by a 20 minute descent. Video and audio from the payload will be downlinked as an amateur TV signal at 426.25 MHz transmit frequency (Cable Ready TV Channel 58). The transmission should be detectable for several hundred miles around the launch site for readers who would like to directly monitor the flight.

Howdy.

I was asked to add a prefix look up utility. It is now available on the QSL page at http://hfradio.org - If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

Don't forget: http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

First you need to decide if the thing is going to be tracking low earth
orbit satellites, or if it will be restricted to higher orbits.

Apparently you are not looking for Geostanionary-only, as you would not
need fully steerable in that case. But there is a big difference between
tracking something like P3D or another molniya-type orbit, and a 500km
circular polar orbit...

Your listening to the downlink at the same time right? Try
transmitting if you do not hear anything and see if you can hear
yourself on the downlink. That bird is pretty busy on weekends.
Are you aiming the antenna right at the sat?

Listsen for the 440 downlink, I am using a preamp (Ramsey) on the
downlink with the Arrow makes a big difference. I usually work AO-27
with the FT-50 @5w using the MFJ-1717 rubberduck. You will also need
to adjust your freq on the downlink. Depending where you are located
the first pass over the East Coast is usually fairly quiet even on
weekends.

At what frequency? You'll need a pretty precise pointing capability for frequencies in the microwave region. At 2.4 GHz the beamwidth for that size dish will be around 2 degrees and it scales inversely proportionally to frequency. Conventional antenna rotators cannot be controlled this precisely. Linear actuators could be used but they don't provide a direct readout of pointing angle, and can only span a limited angular range.

If you like construction projects there is a description of a 5.2 meter dish and mount at:

http://www.SignalONE.com/radioastronomy/telescope/

2-Is AO-10 now the only sat that you can use voice rather than data ?

No, FO-20 and sometimes FO-29 are in JA mode. RS-12/13 is also active in mode AT. You could do voice on RS-15, but most people use CW because of its high orbit and low power. AO-27 is *very* active over the Northern Hemisphere in Mode J-FM; DX passes are hard to work, non-transcontinental passes are better places to get started on that bird. There is also a set of several J-FM birds due for launch, hopefully in a couple of weeks, which should take some of the pressure off AO-27.

The LEOs need much less sophisticated equipment than AO-10, but don't have the coverage and especially for the JA birds, require somewhat more skill to operate than AO-10 due to doppler compensation and antenna tracking.

Hope to catch you on the one of the J birds soon.

73's and good luck,

-- KD6PAG (Networking Old-Timer, satellite QRPer)

Go to amsat.org and look for a program called Fodtrack or maybe
Fodtrak. Starts with FOD anyway. It is a free program and has a diagam
of a controller that works off the parallel port. they sell it already
put together for around $ 100 US . I got one several years ago and it
seems to work very well. The program is not very fancy but I Have ran
it in windows and another program at the same time to do the tracking.

Hi !

I just moved into the Bay Area (MountainView) California.
Have a Kenwood THD7 which has 144/440 + 1200/9600 packet on board.

I would like to get started here now, however:
things differ from the Dutch situation (I come from The Netherlands).

- can anyone provide me with a repeater list
- can anyone provide me with a packetradio digipeater/mailbox list
- what about CTSS
- what about repeater shifts
- what about applied polarisation
- what about the call to use ?

I highly appreciate any input,

Henk - K6/PA3GUO
MountainView, California

When it is only half an hour per day, it would have helped if you
had mentioned at what time it is transmitted.

Would be much more useful than posting the same story twice.

Never get a gs232, it is crap. And it isn't supported by too many tracking
programs anyway.

The best alternative depends on what you can and want to do yourself.
I would recommend building an AMSAT-DL tracking interface without the
relays, it will cost you maybe 5-10 pounds in components and has some
characteristics that are preferrable over the gs232 and many other tracking
interfaces.

(like: it accepts a desired position from the PC and moves the antennas
to that position, instead of getting LEFT, RIGHT, UP and DOWN commands
and reporting the current position, putting the PC in the control loop.
the disadvantage of that approach is that the rotator motors keep running
when the PC crashes)

I have constructed a slightly modified AMSAT-DL tracking interface and
built it into the G5400 control box housing, but I have also seen
commercial versions in a small box that sits on top of the control box.

3186. Re: AO-27 Question

Newsgroup: rec.radio.amateur.space
Date: 1999-11-23 00:00:00 UTC
From: ds0007@medtronic.COM
Message-ID: <81ed14boa1@gazette.corp.medtronic.com>
Source record: 10998

When in doubt about satellites, I check with AMSAT.
Their a-z page (http://www.amsat.org/amsat/a_to_z.html)
gives the following three pages on AO27:

==
========

http://www.amsat.org/amsat/sats/n7hpr/ao27schd.html

AO-27 Schedule and Operation

AO-27 is generally available in FM repeater mode on during daylight passes over the
Northern
hemisphere. The center downlink frequency for stations that are correcting for
Doppler is 436.797 MHz. The uplink is centered on 145.850 MHz. Uplink and downlink modes
are FM.

The repeater is operational from when the satellite's footprint hits 38 degrees North
lattitude
until it leaves about 37 degrees North lattitude during the daylight only. The
repeater may be activated on an ad-hoc basis during evening passes on weekends and
weekdays.

Users are reminded that as an FM-mode repeater, AO-27 is subject to FM "capture effect" and
can
only transmit one signal at a time. Users are asked to cooperate, keep calls
short, give breaks so as many stations as possible can work a pass, and above all, listen
before
and while transmitting. The satellite has a very sensitive receiver, and
stations running approximately 25 watts power to moderate-gain omnidirectional antenna can
get a
good uplink signal into the satellite. A sensitive UHF FM receiver with a
preamplifier and an omnidirectional antenna can receive AO-27's downlink with some fading;
moderate-gain directional arrays should provide a solid receive signal.
Remember to correct for the +/- 9 kHz of Doppler shift on the 436.797 MHz downlink signal
during
a pass. No Doppler correction is needed for the 145.850 MHz uplink
signal.

Users are asked not to transmit on 145.85 MHz if they do not hear the satellite's downlink
so as
to avoid possible interference to other satellite uplinks and downlinks on
adjacent frequencies.

http://www.amsat.org/amsat/sats/n7hpr/ao27.html

Satellite Summary

Name: AMRAD-OSCAR 27 aka EYESAT-1
NASA Catalog Number: 22825
Launched: September 26, 1993
Launch vehicle: Ariane 4
Launch location: Kourou, French Guiana
Weight: 11.8 kg
Orbit: Polar LEO (Low Earth Orbit)
Inclination: 98.5 degrees
Size: 150 x 150 x 150 mm
Period: 101 Minutes

Uplink:

145.850 MHz

Downlink:

436.795 MHz

Features:

Amateur payload combined with an experimental payload.
EYESAT-1 is an experimental Microsat satellite built by Interferometrics Inc, of
Chantilly,
Virginia.
The amateur equipment onboard the satellite was built by AMRAD.
For further information about AMRAD contact:
AMRAD
P.O. Drawer 6148
McLean, Virginia, USA, 22106-6148
http://www.amrad.org

Status: Operational

The latest information is available from: AMSAT News Service (ANS)

==
========

http://www.amsat.org/amsat/news/ans.html#ao-27

AO-27

Uplink 145.850 MHz FM
Downlink: 436.792 MHz FM
Operational.

AO-27 uses a method called Timed Eclipse Power Regulation (TEPR) to regulate the on-board
batteries. In simple terms, TEPR times how long the satellite has been in the

eclipse (or in the sun) and decides what subsystems to turn on or off.

Chuck, KM4NZ, reset the TEPR states on AO-27 (on October 11).

TEPR 4 is 22 TEPR 5 is 58

[ANS thanks Chuck Wyrick, KM4NZ, and Michael Wyrick, N4USI, for AO-27 information]

Check out DejaNews search at:

http://x21.deja.com/home_ps.shtml

Enter some keywords that you remember from the posting, maybe limit
the date/time search so you don't have to wade through stuff from
months ago (optional).

It should turn up. Anytime you want to research something like this,
DejNews is the place to go to see what has been posted on that subject
before.

Also, the posts usually stay on the servers for at least several days.
I don't know about WebTV, but most conventional news readers provide a
way to let you manually re-load whatever is still there, even though
your particular reader has previously marked it "read" (and now
ignores it, making it invisible to you).

With the hardware they put in the unit, they could have built something
decent. The software is crap.
What a waste to use a box like this as a serial-to-4bit parallel and
a 2-wire analog-to-serial converter only...

When you have a 68xx development system and an EPROM programmer, you
can convert it into something more usable.

I recently replaced my "shack" computer with a Sony "Slimtop" (LCD panel Screen, PIII, etc). Unfortunately, it only has ONE available slot (PCI) in which I have the network card.

I have my KCT card installed in my "old" computer which is attached via 100 base Ethernet. It is in the basement directly below the shack. Is there any way I could address the KCT card on that computer in the basement to interface with the tracking signals from NovaWin32 or any other tracking program? I can connect the rotor box to the KCT up here with the existing length of cable.

This is completely false.

If you took the time to look at the GS-232 documentation, you would see
that it does in fact accept a desired position and moves the antennas
to that position, or it can be programmed as you describe, the command
set is quite complete. It can also store a complete timed standalone
tracking sequence !

It sounds like the tracking program you were using with the GS-232 was
'crap' not the GS-232.

I have been supporting the GS-232 for years in MacDoppler and am quite
impressed with the firmware.

> With the hardware they put in the unit, they could have built something
> decent. The software is crap.
I have been using the GS-232 (and half a dozen other controllers) for
several years now, and I really would like to know what about the GS-232
bothers you so much - and what other RS-232 based controller you are
comparing it to ?

> What a waste to use a box like this as a serial-to-4bit parallel and
> a 2-wire analog-to-serial converter only...
What exactly would you like it to do besides control the 5400 ? I am
surprised that you didn't mention how they didn't upgrade the GS-232
firmware to handle the 5500 and controlling software must use a look-up
table to spoof the azimuth commands :)

But you really don't seem to know much about the GS-232's firmware -
beside the fact that it is 'crap'.

>When you have a 68xx development system and an EPROM programmer, you
>can convert it into something more usable.
And have you done this ?

Earlier this year I bought my first computer. I have been interested in getting into packet and various other digital forms of communication including space-related communication. Is there someone who can send me some links or other sources of info on this subject and what type of equipment I might need? Your response would be greatly appreciated....

What's going on with RS-13? All I am hearing on the downlink frequencies is RTTY and what appears to be some type of beaon on 29.480. Several days of this and no cw/ssb. Can anyone enlighten me. Thanks & 73, Pat K4AVO

And I'd add in http://www.metactrawler.com (or dogpile.com)

That was one of the best sources for me when I was (still am!) getting started. Usually plop into one site that's close to something I'm looking for, pull out a couple ideas and then I'd find a link to other things. Surf's up and there's a LOT out there!

73 and Good luck

There really aren't any true Keps for the moon because the moon's orbit is perturbed too much by the Sun and other bodies. I once obtained some pseudo-keps for the moon on the web several years ago but they became inaccurate over time. A better approach is to use a program like STK (Satellite Tool Kit) which can provide very good lunar predictions. It is available for free from www.stk.com

Another approach is a program like moonkeps which generates
pseudo-keps for the Moon. They go stale quickly, because they
do not actually model what's happening...

The host satellite's downlink (COSMOS 2123) is getting into the
amateur transponder. Try listening around 150 MHz during an RS-13
pass...

3210. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-12-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <822ium$4dq$1@news.hawaii.edu>
Source record: 10926
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

I just re-read the ARRL restructuring proposal. The only way we are going to get the Board of Directors and Division Directors to wake up and pull their heads out of their ass is if they start losing members. The won't listen to anything else.

I have no ARRL membership to cancel. I have never joined ARRL, and I
will not do so until the League eliminates its policy of
discriminating against no-code licensees.

Hey guys! Just how long and hard do the no-coders have to
whine and squall before you "get it"? ANYTHING that doesn't
meet their personal private specs for licensing is "abuse"!

3219. Pegasus Rocket Launch

Newsgroup: rec.radio.amateur.space
Date: 1999-12-02 00:00:00 UTC
From: blanton@pe.net
Message-ID: <blanton-0212990834110001@c3p058.tem.pe.net>
Source record: 10935

Pegasus Rocket Launch
=====================

An Orbital Sciences Corp. Pegasus rocket is scheduled for launch from the fuselage of an L-1011 aircraft Saturday, December 4, around 1851Z (1:51 p.m. EST). The launch will take place approximately 100 miles off the coast of Virginia. The L-1011 will depart from NASA's Wallops Flight Facility (airport ID KWAL) approximately one hour before launch (1751Z, or 12:51 p.m. EST).

If you are in the local Washington, D.C. area, or even closer to Wallops Flight Facility on the eastern shore, you can monitor the launch on 121.950 MHz.

Possible call signs to listen for;

Orbital 1 (L-1011 aircraft)
NASA511 (T-38 chase plane, from NASA Langley Research Center, VA)
NASA846 (F/A-18 chase plane, from Dryden Flight Research Center, Calif.)

Other frequencies to monitor for possible launch support;

121.700 PATUXENT; CLNC DEL
121.950 NASA RANGE SURVEILLANCE AIRCRAFT
123.400 NASA RANGE SURVEILLANCE AIRCRAFT
126.500 WALLOPS TWR
127.950 PATUXENT APP/DEP CON
132.550 WASHINGTON CENTER
134.100 PATUXENT APP/DEP CON
156.600 NASA CONTROL/U.S. COAST GUARD
164.700 NASA RANGE SAFETY
170.350 NASA SECURITY
170.400 NASA PAGING SYSTEM
171.000 NASA SECURITY
311.200 (AM) NASA AIRCRAFT OPERATIONS
314.000 (AM) PATUXENT APP/DEP CON
353.600 (AM) WASHINGTON CENTER
394.300 (AM) WALLOPS TWR

Are these the same people who want a college degree with out going to
college for 4 years?
Come on guys. If you really want an Extra license ANYONE can do it. You
can't expect everything for free.

Actually, like it or not, the ARRL is the only organization trying to promote
radio that the Feds WILL listen to, with any amount of decent consideration.
Everyone else the Feds listen to, as regards radio, are self-serving
commercial industry lobbyists...
If more people joined the ARRL they could effect some change rather than leave
it and let them dry up and blow away.
Mike

You sound like another guy painting himself as a victim. Neither the
ARRL nor the FCC is guilty of "discrimination" against those who have
not passed the code. They've obtained amateur radio licenses with
certain privileges. If you wanted to expand those privileges, the same
avenues open to others are open to you.

73 and I already enjoy good DXing,

Actually Dave, notice the silence coming from the NCI group? Amazing, a non member criticizing an organzation that he is not part of. I did that and the Bod attacked me at every turn. That NoCode Double standard again. Just wait, I am sure the NCI mouthpiece from MI will chime in any time now. Funny how it was not OK for me to discuss NCI policies while a non member but it's OK for a non ARRL member to have his say. Just shows that NCI is not what they profess as in ARRL.

just keeps on getting better and better

BTW, he sounds more like that Ploude guy than anything else. The two of them must share a common brain. Too bad, the batteries in it are so low.

What Mike isn't telling anyone is he runs a 15 kw spark gap transmitter.
:-)

He works satellites, tail lights and flouresent lights at the same time .

Being in the great northern state he only pisses off polar bears and the
rest of Alaska thinks it the Northern Lights.

Nice offer Mike.

I saw that it seemed possible to use AO-27 for a transatlantic QSO. The footprint seemed OK but I couldn't hear the bird the last time I tried.

Is it a possibility I wonder?

Discriminate against no code licenses???? Gimme a break! There are plenty of articles that are targeted towards the no-code people. And how do you know if they discriminate if you have never been a member?

And just for your information, the majority of hams have passed their code tests. It really isn't that difficult. But in these days of GIVE IT TO ME NOW attitudes, (read: I dont want to work for it), it is no wonder we have a no code license group.

I know that my response makes me sound like I am about 80....actually I am 37. I have had my license since I was 14 (Jeeez, I am almost ready for QCWA!!! yikes!!). I failed my code exam at least 6 times for Novice, and at least 3 times for General.

So as they would say in South Park..... Quit Ur Bitchin'.

Kent Winrich, K9EZ
EXTRA - and busted my butt for it.

I'm French ,so my English or American may be not perfect

Well ,i'm looking for informations about low level
modulation and High level Modulation in AM transmission.
Particularly to know when and why one use High level
modulatio instead of Low level modulation
(because of the energy transmitted,thebandwidth ,the power
or the frequency carrier?....

Thank you

* Sent from AltaVista http://www.altavista.com Where you can also find related Web Pages, Images, Audios, Videos, News, and Shopping. Smart is Beautiful

Source record: 10858

Low level AM is when the audio is applied to a carrier wave in the low power stages and then followed by one or more linear amplifiers. Not very efficient either as I think the linear amplifier is only about 35% efficient. Most single side band signals are generated this way with the carrier filtered out. FM is also done this way in the low level stages and the frequency is multiplied many times. FM can use class C amplifiers and the efficiency can be very high.

High level AM is when the audio is applied in the last stage of the transmitter. There are several ways of doing this and one is Plate Modulation where a big audio transformer is installed in the DC power line going to the final amplifier tube or tubes. It usually takes an audio power equal to half the power of the transmitter.

It's not looking good for Mars Polar Lander.
We can keep our fingers crossed, but the outlook is grim.

Perhaps the general rise of incompetence in U.S. government
agencies has also hobbled NASA and its engineering assets.
Is it time for private concerns to step up to the plate?
Is it time that we went beyond putting repeaters in orbit,
and did something new, exciting and scientifically valuable?

We have the people within the amateur community
with the knowledge needed to create an interplanetary probe-
perhaps even one that could land.
Our community has built many spacecraft.
We have found the funds- done the work.
We have successfully negotiated for space on launch vehicles.
Our community has leaped these high hurdles many times.
Should we set another, higher hurdle
with which to challenge ourselves?

It would not be easy.
Opening new worlds is never easy.
But our community could do it- no question.

Shall we?

I did, I was 16 yrs old. K8MB. 1977. Took me three tries down at the Federal building in Detroit and my mom drove me on every single try. I could read 40 wpm in my head at the time. Aside from winning a master electrician license that was the single greatest feat that I ever experienced with my clothes on!@! :-).. hehehe. Mike K8MB. Code is marginally useful but it still is the rule. Why ask why just earn it.

I was pondering: Now that we have attacked Mars will they respond in kind?

Also, instead of Marshmellows, do people on Mars eat earthmellows?

I think the Marsians probably all operate CW and AM. SSB is probably not used as it sound too much like a struggling earthling (kinda like with a Mars bar up his nose).

```
==========================
APRS PROTOCOL SPECIFICATION
==========================

TAPR announces release of the second public draft of
the APRS Protocol Specification.
-----------------------------------------------------

It's finally here! The APRS Working Group has completed the second
public draft of the APRS Protocol Specification.

This document covers the core functionality of APRS Protocol Version
1.0 as it works today. This is the base level specification that all
implementations should comply with, and it was unanimously adopted by
the Working Group members, who include the authors of APRS-DOS,
WinAPRS, MacAPRS, X-APRS, PocketAPRS, APRS+SA, javAPRS, and APRServe,
and the developers of the Mic-E and Pic-E products.

The Specification forms the basis for future Working Group projects,
including APRS test suites and the APRS Certification Program. The
WG also hopes to use this document as the basis for further
specifications, including IGate and APRS digipeater operation.

Over the last 8 weeks the specification has grown from 18 pages to 93.
It now includes packet format diagrams, the APRS symbol tables, full
details of the Mic-E encoded format, the compressed lat/long position
format, plus weather report and telemetry formats. Above all, the
specification contains many examples of how APRS data is formatted to
make it easier to understand.

The APRS Protocol Specification is now available on the APRS Working
Group web page at: http://www.tapr.org/tapr/html/Faprswg.html.

It is available in PDF format, both zipped and unzipped. The zip file
is a little under 1.5MB. You can read it with a PDF reader such as Adobe
Acrobat 3 or 4.

This document is still a draft. There will now be a 15-day public
discussion period in which anyone may feed back comments, criticisms
and suggestions for improvement. Full information on how to do this is
contained within the document.

The final cutoff for comment is midnight U.S. Pacific time on Sunday 19
December (i.e. 0800 UTC on Monday 20 December).
```

After this date the Working Group will consider all the comments, and will issue the final approved version of the Specification as soon as possible thereafter.

John Ackermann, N8UR (jra@febo.com)
Administrative Chair

FCC TO ARRL: NO EXPANSION OF PRB-1

If you live in a condominium or other housing with deed restrictions, you will not be getting any assistance from the F-C-C that will let
you put an antenna on the roof. This as the regulatory agency turns down a bid from the American Radio Relay League to expand
the scope of federal preemption over Amateur Radio operations. Newslines David Black, K-B-4-K-C-H, has the details from our South
East bureau:

The FCC hands the A-double-R-L a setback. The League had
wanted the Commission to strengthen PRB-1. That's the federal
pre-emption over state and local ordinances which restricts amateur
radio towers.

The League wanted the FCC to in effect declare any restrictions
Limiting amateur radio antennas to heights below 70 feet as
Unreasonable. The only exceptions would have been if the state
Or local authority could show that the restrictions were necessary
For health, safety or aesthetic reasons.

But the Commission says NO to the League's request, saying its
existing policy with PRB-1 is sound. And, the agency says, it would
be neither prudent nor appropriate to set a height standard
for amateur radio antennas and towers. The FCC also says it does not
want to impose specific rules that local governments must include in
zoning ordinances.

The League had also asked the FCC to clarify that local governments
should accommodate ham antennas, rather than balance local
interests against federal interests involving effective public service
amateur radio communications. And, A-double-R-L wanted the

Commission to pre-empt what it called overly burdensome conditions and high costs that localities might require involving amateur radio antenna installations.

The Commission says its previously set standards have worked relatively well.

>From Birmingham, Alabama, David Black, KB4KCH, for Newsline.

The ARRL Executive Committee was scheduled to review this FCC order at its December 4 th meeting to determine what further
action is appropriate. That meeting should be taking place about the time that this newscast goes to air. (From ARRL Bulletin)

**

THE NUMBERS ARE IN

Over one sixth of all United States ham radio operators reside in a single state. According to the latest statistics published by Fred
Maia in this W-5-Y-I Report, California now plays host 103,365 of the nations 676,737 licensed radio amateurs.

But that's not all. California is also the home of the largest concentration of code-free Technician class hams to be found anywhere in
the continental United States or its possessions. That number is 37,157 with another 20,172 holding the 5 word per minute
Technician Plus ticket.

And would you believe that California also has a larger number of Novice class operators than it has Extra class? The number of
Novices stands at 10, 019 while the Extra class is only 8,826. 13,649 Advanced class operators round out the states total.

Not surprisingly, the place with the second largest ham radio population is Texas. Some 40,915 people hold licenses in the Lone
Star State. And again the most popular license is the code free Technician class with 12,391 holders of that ticket. That's followed
by 7790 Technician Plus holders, 6,960 Advanced class, 6,581 Generals, 4,994 Extra's and 2,199 Novice licensees.

Third place goes to Florida with its 39,941 hams, followed by New York with 32,820 license holders and Ohio with 30,063. The
lowest ham radio population in the 48 contiguous states turns out to be Delaware with only 1,389 but even that's quite a bit compared
with the District of Columbia. There only 414 citizens hold licenses of which 101 are General class.

The smallest ham population in a United States administered territory is the U-S Virgin Islands with a ham radio population of 301.
And for those of you wondering about the far North-West, the state of Alaska is holding its own with 3,169 hams. (W5YI Report)

**

ALASKA RESCUE

And from Alaska, word that three fishermen are alive in part do to ham radio. According to news reports, a Coast Guard helicopter
plucked two brothers and another person from the Gulf of Alaska after their boat sank.

The Coast Guard got its first report of the incident from an unidentified ham radio operator. Soon afterward, the distress beacon from
the fifty-two foot vessel was picked up by the Coast Guard stations at Juneau and Sitka

About 90 minutes later, a helicopter found the three fishermen in the icy water. All were wearing survival suits but were suffering from
mild hypothermia. By that time their vessel had sunk in twenty-five foot high seas in a fishing area about 70 miles southeast of
Yakutat. This is a region known for its fierce winter storms. No other information was given regarding the part played by Amateur
Radio in this rescue at sea. (Published news report)

**

BREAK 1

This is Newsline, heard on bulletin stations around the world, including the W-B-5-R-A-P repeater serving Purcell Oklahoma.

(5 sec pause here)

**

ANOTHER WIDE SIGNAL WARNING ISSUED

For the second time in as many weeks, the F-C-C has told a ham that he is transmtting an excessively wide signal. In a November 2
nd letter to Charles Schwartzbard, A-F-2-Y, of Clifton New Jersey, the F-C-C says its monitoring information indicates that he has
apparently been operating his station in a manner that causes it to emit an unusually wide signal, one that is over-power, or both.

Specifically, the F-C-C alleges that instances of these violation occurred on November 17 and 18 th in the frequency range of 14.315
to 14.318 MHz. The Commission also says that its Information further indicates that Schwartzbard ignored requests from other
licensees operating on adjacent frequencies to correct his transmitter emissions in accordance with good Amateur practice.

The Commission has directed Schwartzbard to answer--- in detail ---several technical questions pertaining to the way he operates his
Amateur station. A-F-2-Y was also cautioned that airing personal conflicts with other licensees on the Amateur bands, or slander or
deliberate interference to other licensees will result in the loss of Schwartzbard's Amateur license. (FCC)

**

HOLLINGSWORTH TO SPEAK IN DAYTON

And while on the subject of Amateur Radio enforcement, the Dayton Amateur Radio Association has announced that the nations top
ham radio rules enforcer will be the featured speaker at Hamvention 2000. According to DARA, F-C-C Special Coulsel for Amateur
Radio Enforcement Riley Hollingsworth, K4ZDH, has accepted an invitation to keynote the combined 2000 Dayton Hamvention and
ARRL National Convention Grand Awards Banquet next May 20th. (DARA)

**

VIRGINIA MAN INDICTED FOR OPERATING AN UNLICENSED FM STATION

A Virginia man has been indicted for running an unlicensed broadcast station. According to Bob Gonsett's C-G-C Communicator
newsletter, The FCC Enforcement Bureau announced that on November 16, a grand jury serving the U.S. District Court in Richmond
had indicted Khalid Kubweza, on four counts of operation of an unlicensed FM broadcast. Kubweza is accused of transmitting on
91.7 MHz from his Richmond home. (CGC Communicator, FCC)

**

RMARC REPEATERS TEMPORARILY DOWN

If you are traveling into the North-East, some repeaters that you may rely on will not be there for a while. This with word that the
Ramapo Mountain Amateur Radio Club's repeaters on 146.49 and 446.175 MHz and the club's A-P-R-S digipeater on 144.39 MHz,
are temporarily off the air.

According to Joseph Jack, WB2WAB, the machines were turned off on November 15th for maintenance and repair. No date has
been announced for when they will be returned to service, but full operation will resume as soon as possible. The packet digipeater
on 145.01 MHz is not affected and will remain in operation. (Hudson Loop)

**

THE LOW COST HAM AID BOX

Repeater owners and trustees might want to take note of a very intriguing article by Bob Bruninga, WB4APR that appears in the Fall
1999 issue of Amateur Television Quarterly magazine. Its called the Ham Aid Box and Bruninga says that it's a way to distribute text
messages using an off the shelf piece of consumer electronic gear..

According to WB4APR, the caller I-D units that many of us have in our homes use the same 1200 baud ASCII and Bell 202
standards as used on packet radio. He goes on to say that a caller I-D unit hooked to the speaker of a mobile or base ham radio
station can display up to four lines of text messaging. Since all caller I-D units have memories, multiple messages can be stored.

The text message would have been generated by any ASCII capable T-N-C connected to the repeater. Bruninga says that this could
make it possible to implement a universal and low cost amateur radio text distribution system -- almost overnight. (WB4APR Internet
Posting)

**

REPEATER SITES: WHAT HAMS ARE DOING

A few weeks ago we told you of the problem of retaining sites for ham radio repeaters in light of consolidations in the tower
management business. As more and more radio sites come under the management of a small number of mega-corporations, free --
or low price radio sites for hams are quickly disappearing. And there have been reports of the mega owners doing all within their
power to keep experimenters like hams off hilltops and roofs that they share with other site administrators. As a result some ham
radio repeater operators have taken the extreme alternative of buying property and putting up their own sites. In part two of our series
on the repeater site crunch, Newsline producer Bill Pasternak had the chance to chat with a ham who has done just that:

I first met Frosty Oden, N6ENV, almost two decades ago. Along with Roy Neal, K6DUE, Frosty and I were the
people who brought you the video about Owen Garriott's first ever ham radio mission into space -- Amateur Radio's
Newest Frontier. By that time, Frosty had his first repeater on the air and he has been involved in V-H-F and U-H
F relay communications ever since. But unlike most other ham radio system owners, Frosty Oden is also the owner
of the site that hosts his systems. We asked him why he decided to make such a large investment for a hobby:

SOT:

In-Q: When you are a tennant...
Out-Q: ... look on their face.

Oden says that these were among the reasons that he decided to cut through the red tape and invest in a
mountaintop home for his repeaters. He also realizes that not every ham can afford the luxiary of site ownership.
His advice: Take a lesson from the professional two-way people and consolidate:

In-Q: If a group of Amateurs...
Out-Q: ... vault space for the Amateurs.

We asked Oden what he sees for ham repeater owners in the future. He admits that he is far from optomistic:

In-Q: The big problem is ...
Out-Q: ... out of luck.

Oden says that the best way for hams to survive the coming repeater site crunch is begin pooling our resources
and learning to share.

> For Newsline, I'm Bill Pasternak, WA6ITF

-----
unfortunately, more and more hams are now finding that the same mega-managers that evicted them from where they had been are
also filing in opposition to building permits and even challenging land sales. They don't want hams near their sites for fear of
interference from Amateur Station equipment and the possibility that some ham radio clubs might decide to rent their excess space
to commercial customers. We will deal with this part of the story in a future Newsline report. (Newsline)

**

BREAK 2

Serving you 52 weeks a year since 1977, this is Newsline, with links to the world at www.arnewsline.org.

(5 sec pause here)

**

SOLAR MAXIMUM COULD ZAP POWER GRIDS

Communications satellites and power grids could be disrupted for the next three years because of intense solar activity associated
with the upcoming Solar Maximum. Newsline's Bill Burnett, KT4SB, reports from Miami:

According to a report on the program This Week in Amateur Radio that in tuirn quotes other published news
reports, starting in the year 2000, space storms, radiation showers and their affects on power grids are all
expected during the upcoming maximum, which is expected to last about three years. And, according to
administrators at the National Oceanographic and Atmospheric Administration, the United States is especially
vulnerable because of its increasing dependence on satellites.

National Ocenaographic and Atmospheric Administration officials say that these storms act to alter the Earth's
magnetic field. Because of this, they may send strong enough electrical impulses that could

overwhelm vulnerable power grids.

One of the strongest impacts occurred during the last solar cycle in 1989. Thats when the entire Province of
Quebec in Canada went dark because a geomagnetic storm caused a power grid overload.

To prepare for the possibility of a more widespread problem, NOAA scientists are using state-of-the-art scales
designed to depict the severity and impact of upcoming solar storms on public safety and vital services.

And while amateur radio operators await the solar maximum hoping for improved conditions on all High Frequency
and V-H-F band conditions others are at work in another important area. They are getting their emergency
communications equipmment and back-up power systems ready -- just in case.

>From Miami, I'm Bill Burnett, KT4SB, reporting for Newsline.

By the way -- a quick note concerning the This Week in Amateur Radio program. Word that it is moving to a new C-Band domestic
satellite effective as of Saturday, December 4th. Look for the program on T-V-R-O Net on G-E Americom Spacenet 4, transponder
16 Horizontal. The program audio will be on the satellites 5 point 8 MHz wideband analog subcarrier. (TWIAR, NOAA)

**

ARIANE 5 LAUNCH DATE ANNOUNCED

And with another kind of satellite news, Arianespace has now scheduled the first commercial launch of its new Ariane 5 heavy lifter
for December 10th. According to a report from the Amsat News Service, this Ariane flight will carry a European Space Agency
scientific satellite to orbit. W8GUS says that the rocket has been moved to the launch location and a rehearsal has been completed.
(ANS, W8GUS)

**

SUNSAT AWARD

There is a new worldwide ham radio award for using a satellite that is already in orbit. Jeramy Boot, G-4-N-J-H, reports from
Nottingham in the U-K.

PKG Here

Again that address is the Southern Africa Amsat, Post Office Box 1842, Hillcrest, 3650, South Africa. (G4NJH, S. AFRICA AMSAT)

**

FIRST IRISH ATV REPEATER

The Republic of Ireland has it very first fast scan amateur television repeater and a sightless ham is responsible for making it happen.
Roy Neal, K-6-D-U-E, has more:

The Cork Amateur Television Group has been granted the first Fast Scan TV repeater license in the Republic of
Ireland. The callsign of the new TV Repeater is EI2TVR and it operates in the 23cm band.

What is unique about this project is that it was put together and set up by a blind operator, Aedan O'Meara,
EI3EG. It was only in the last year that Aedan became interested in this mode and set about getting all the
necessary information both from Ireland and the U-K. The transmitter was designed by the West Sussex ATV
group. The frequencies in use are 1250MHz for the input and 1293MHz for the output.The repeater is presently
located on Spur Hill in Cork, which also houses the Cork 70 cm voice repeater.

> Roy Neal, K6DUE.

According to reports, the EI2TVR repeater is fast becoming a popular meeting spot for hams interested in fast scan A-T-V.

**

DX

In D-X, keep an ear open for Malawi as ZS5BBO will arriving on or about December 19 th. He will be there until December 26 th and
plans to be active from the shores of Lake Malawi, signing 7-Q-7B-O. Listen for Edwin on 10, 20, 15 and 6 meters. All QSL cards
must be accompanied by an S-A-S-E Edwin Musto, P.O. Box 211032, Bluff, 4036, South Africa. (OPDX)

And the DX News Letter says that DL7FER, is expected to be in Sri Lanka until Christmas. He will operate CW and SSB on 40
through 10 meters including the W-A-R-C bands. His Q-S-L go direct or via the bureau to DL7FER. (OPDX)

Lastly, Panamanian amateurs will be allowed to use the special prefix 3-F between the 1st of December 1999 and the 5th of January
2000 This, to celebrate the Republic of Panama's acquisition of the Panama Canal. HP1AC will be active on C-W as 3F1AC, and
QSL's should go to P-O Box 0860-00144, Villa Lucre, Panama. (OPDX)

**

THANK YOU CHUCK MARTIN, KD6NUJ

And finally, It is no secret that volunteerism is one activity that binds the Amateur Community together. It's central to Newsline's
existence.

In the more than 20-years Newsline has been on the air, volunteers -- often without our knowledge -- have contributed to our success.
During the first station break in each Newsline report, you hear us acknowledge bulletin stations by name, that feature our Amateur
news service.

This week, as we conclude our 1164th newscast, we want to pause to recognize a Ham: Chuck Martin, KD6NUJ. Chuck is the
individual who recorded and encoded our weekly QSTs in Real Network's streaming audio format. He then posted them on Tucson
Amateur Packet Radio's web site -- each week -- since report #962 on January 21, 1996.

As we approach the new millennium, we would recognize Chuck's contributions
for nearly four years of service. Unfortunately, Chuck's home and Ham Shack suffered severe flood damage last September when
Hurricane Floyd struck the Eastern Seaboard. Although KD6NUJ has attempted to keep his personal commitment to Newsline's
Internet listeners, he comes to the realization that this IS only a hobby and he needs to focus on returning his life and his lifestyle
back to normal.

So we at Newsline want to pause and say thank you Chuck. Thank you for your volunteerism and your dedication, and wish you the
best "73."

TAPR's webmaster Greg Jones, WD5IVD, assures us that Tucson Amateur Packet Radio remains ready provide a streaming audio
home for Newsline, but that it may be a bit spotty until we get someone to assume the duty on a regular basis. In the meantime, a
downloadable version of each weeks Real Audio file will continue to be available at Hank Armstrongs F-T-P site which can be reached
from a hot-link on our website at www.arnewsline.org.

**

CLOSE

With thanks to the ARRL, the C-G-C Communicator, the F-C-C, the Hudson Loop, the Radio Society of Great Britain, This Week in
Amateur Radio and Australia's Q-News, that's all from the Amateur Radio Newsline. Our web page is at www dot a r newsline dot org
and our e-mail address is newsline at a r newsline dot org. The address for the Newsline support fund is Newsline, Post Office Box
660937 in Arcadia California. The zipcode is 91066.

For now, with Bill Pasternak WA6ITF at our editor's desk, Im Mert Garlick, N6AWE, saying 73 and we thank you for listening.

>Well,I wasn't going to post on this,why aggravate myself,but what the
hell..

I was a novice in 1973,I passed the novice test easily,I borrowed a
friends old footlocker transceiver,and I was going to buy it if I liked
it.I had a bad opinion about CW before I got my liscense,and the
"wonderful" experience of operating CW totally turned me off.I threw my
ticket in the drawer,and forgot about it.I got my No-code in 1991,and I
use my HT occasionally,not a lot.
For years I wanted,my General,and even started to learn CW again to get
it,but after so long,getting up to about 7wpm,I just had enough!A couple
of years later,I started again,same result.After the third time,I
realized I didn't want it anymore.The CW requirement finally killed my
HF dreams,I have HF equipment,but don't really care about talking to old
guys about the Wx or whatever..
This CW requirement nonsense has been going on for over 50 years,if they
want to keep it part of the exam,make it only 20%,so you can pass and
blow the CW part.This maybe will passify the CW'ers,and get people
interested in being a ham.I know several people who heard about the no-
code ticket,and thought it meant the code req.for HF was gone.They were
all excited,and were shot down when they were told the real story,only
one of these people has become a ham,the rest just SWL or do the web..

Now that would be DX!!

Though I don't agree that NASA engineering is hobbled, Dave's suggestion is not so far-fetched. Pushing the (RF) envelope is what this hobby is all about. Building - then landing a package of electronics on Mars (or more likely the Moon) is probably beyond our ability to fund, but it is not beyond our technical capabilities as a group.

That said, parking a satellite in Earth-geostationary or a Lunar orbit is certainly well within our grasp. Sign me up Dave.

Thank you for your serious and thoughtful reply, Dan.
There have been some hecklers-
as there always are for new and challenging ideas-
so I appreciate your comments.

Dan Quigley wrote:
> ... suggestion is not so far-fetched.
> Pushing the (RF) envelope is what this hobby is all
> about. Building - then landing a package of electronics on

That argument was made before Oscar 1, 2, etc.
We found a way. And if we set our sights small at first-
say, a small beacon or digipeater orbiting the moon,
which need not weigh more then a few pounds-
we're not talking about huge money. Missions still
go to the moon on occasion- with persistence, we
could wrangle a spot on the "cruise ring."
We have lots of stations doing EME with plenty of
S/N headroom for CW.
Using PSK31 for command could be even better,
once we animate the tuning to compensate for doppler.
Someone argued that we didn't have experience
in plotting orbital entry, etc.
Well, I believe that we have many people, especially
in AMSAT, who understand celestial mechanics well
enough to do the job.
Ion drive, which is off-the-shelf now,
might provide a slow but sure way to get where we
want to go without dealing with nasty volatiles.
There are a zillion problems,
but we have the ability to solve them.

>...it is not beyond our technical capabilities as a group.
No question. It could be done.

> That said, parking a satellite in Earth-geostationary
> or a Lunar orbit is certainly well within our grasp.
> Sign me up Dave.
I don't personally have the education
to lead such a project. But someone at AMSAT does.
We need to think about doing something other then
repeating old triumphs. We need to start planning
for something higher- something that can inspire again.

Can you imagine the positive publicity that would come
to a community of "amateurs" who put a spacecraft in orbit
of another celestial body? Or landed there?
Can you imagine the fame and honors
to the leader and team who did it?
I think you'd find CBS, NBC, ABC and FOX very
interested in giving the whole team their 15 minutes of fame.

More importantly- we'd finally have something that
would excite the very best of today's youth about
amateur radio- *something that would require the existance
or amateur radio*. You've got to have radio spectrum
access if you're going to command a spacecraft.
It's something they can't do on the internet.
You can't trail an Ethernet cable to the moon or Mars.

We could sell this idea to the current
NASA administration- "space camp" for
future mission control and spacecraft communications staff.
If a team undertook the effort to create a credible
presentation, I bet we'd find NASA backing them.
With that, we could find the funds.
I'm not rich but I could certainly kick in some bucks.
How about a program to put the names of donors on
different parts of the spacecraft?
I'd buy solar cells for each of my children.

AMSAT- you've got the people with the education
and the wherewithal. Someone there is a future
team leader in search of a mission.
Put away those plans for yet another orbiting repeater,
which might be "cool" but would break no new ground.
Whatever neat-o communications package you build
into the next low Earth orbit craft,
it's been done by others before, dozens of times.

Let us challenge ourselves with something that hasn't been done;
something the cynics say can't be done:
private citizens- "amateurs"-
engaging in interplanetary exploration.
Anyone involved in such a project-
which, in the long term, would return data
advancing our understanding of the universe-
will know they have done something inspirational,
lasting, positive and even historic.

Remember what JFK said:

"We choose to do these things, not because they
are easy, but because they are hard.
Because they will require the best that (we) can give..."

I still find that passage inspiring.
It was a good idea then.
It's a good idea now.

Whaddaya say?

You might find www.spacedev.com interesting. They're a commercial company, but they are committed to attempting to land a probe on the near-Earth asteroid Nereus. I remember hearing somewhere that they've signed on at least one ham from AMSAT to their team. I think they're definately worth keeping an eye on, since they seem totally serious about attempting to do this. They're also selling payload space.

An AMSAT in lunar orbit... I like that idea! That would be very cool.
Could enough power be provided with photovoltaics for that range?
What about antenna pointing, it would be much more critical.
What about putting it on the surface, that would simplify
pointing and almost eliminate doppler, at the cost of being in shadow
for weeks at a time.

Let's have a contest, Gil: You build a PSK31 station from scratch,
and I'll build a CW station from scratch. Let's see who can get
on the air first, and collect say, 1000 contacts.
Jeff KH6O

P.S. Let's define "from scratch" as using discrete components
from an old TV set. Note that the variable cap from the UHF tuner
works fine in a VFO; I built one for 40m.

Those are fine if you don't mind using and being *completely* dependent
upon someone else's equipment.

On the other hand, ham radio is the *only* communications medium,
outside of shouting, in which any two operators anywhere in the world,
can communicate directly without using government or commercial
communication services. Those same two operators don't even need to
purchase commercially-built radios -- they can build them themselves.

It's no longer true that HF is uninteresting commercially. Urban areas are pretty well built out with cell repeaters, the only growth area is communications away from repeater sites. Iridium has pretty well shown that putting up enough LEO satellites to get LOS coverage everywhere is too expensive, and the transceivers too clumsy. Simultaneously, new technologies like spread spectrum, data compression, and error-check coding is making it possible to get easy-to-use, good quality communications in very limited bandwidth. Presto, HF is interesting again. Especially if you can find a set of world-wide allocations at nicely spaced frequencies, currently occupied only by a financially and organizationally weak service.

Not at all. I can pose the question, but I have no where
near the education and experience in this area to lead such
an effort. As I posted later in this thread, AMSAT surely has
a future team leader looking for a mission.

I've been talking with a couple of people and have concluded
that the first thing needed is for an amateur to build a
station that can hear signals from Mars Global Surveyor,
and I'm looking into that. Even I have a shot at that.
Such an achievement could spark a real look at such a mission.

Kind Regards,
Dave S.

No, let's define "from scratch" to mean "using only common stuff
you can find around most houses". Like, say, a PC and a sound board.
(Hell of a lot easier to find than a TV with nonsynthesized tuning.)

Pr = Pt*Gt / (4*pi*R**2)

Pt*Gt (EIRP) = 10 W
R = 50M mi = 8.046e10 m

Pr = 1.229e-22 W/m**2
= -229.1 dBW/m**2
= -189.1 dBm/m**2

You don't HAVE to be a ham to do that. :-)

I just was trying to make a point that the Packet is better than CW is
better than fart signals is a dumb debate. It goes on forever with a
thousand different points of view. Regardless of it all there are always
going to be things on the test that, depending on ones point of view, are
going to be outdated and useless.

On Fri, 3 Dec 1999 07:31:44 -0600, the estimable "Kent Winrich, K9EZ"
<kwin@execpc.com> postulated:

>For weak signal contacts and others ie: DX, EME, MS, VHF, Tropo, Ragchewing,
>Sat., need I go on? Sorry if you dont take advatage of CW, but a very large
>group of us do.

Glad that you enjoy working CW. Why continue making it a license
requirement though? If one wants to learn it fine. If one doesn't want
to learn it why keep them from working other modes in HF bands?

What is the average age of hams in the USA these days? What is the
average age likely to be in five years? Ten? Fifteen?

It seems to me that if something doesn't change to hook in the next
generation of hams that amateur radio in this country will be in
danger of disappearing.

Without practitioners how long do you think you'll be able to keep
your spectrum from out of the clutches of the commercial interests?

Just wondering.

The spectrum that the commercial interests are interested in
(UHF) is available to hams with a code-free license, so the
code requirement will not be the cause of any loss of freqs.

If you only want to track stars and planets, then it is quite
sufficient to compensate for the Earth's rotation.

Permanently mount one axis parallel to the Earth's rotation axis and
use a synchronous motor driven by the local mains to drive it around
this axis. This is the standard technique for driving astronomical
telescopes and it will give an accuracy for long exposure photographic
exposures.

In your case you would have to make sure that the structural integrity
of your dish is better than one degree even with some variable wind
loading.

If you want to track objects close to the Earth, you need computer
control on both axis and possibly also some feedback arrangement.

One place to check for the mechanical parts for telescope or antenna
mounts are military surplus sales. Check out for cannon, radar or some
instrument mounts. They are quite sturdy and have gears to drive them
around the axis, so you just have to install motors to drive these
gears (if they aren't there already).

Sounds interesting. I look forward to hearing what progress
you've made on this next fall in Portland. If you think it's
a good idea you're the obvious person to make it happen...

The RF and stuff shouldn't be a problem. Getting a launch may
be tough, as it is proving with current AMSAT projects.

But psk31 works better than CW and is one more reason that it is
outdated and useless.
I used to be a CW freak but now it is just for fun.

Gerry,
How does removing the CW requirement resolve this problem?
It sure didn't improve things when the VHF CW requirement was
eliminated.

just wondering

Heck Ham packet is outdated and useless. By todays standards it is one of the slowest around. Toss it out. While were at it toss out the HF stuff too, it is outdates and useless. Use a phone, modem or the internet or satellites. The rest are just outdated and useless.

> I used to be a CW freak but now it is just for fun.

Fun? You make it sound like a hobby or something. If you were still a CW freak it would be ok though?

In a 0.001 Hz or 0.0001 Hz bandwidth you might get something that
could be distinguished from noise. Not very practical for
communications purposes, even the VLF submarine communications system
would be ultra fast compared to this :-).

I've been talking with a couple of people and have concluded
that the first thing needed is for an amateur to build a
station that can hear signals from Mars Global Surveyor,
and I'm looking into that. Even I have a shot at that.
Such an achievement could spark a real look at such a mission.

Yes, and it would demonstrate to the non-amateur community that we have the
stuff to pull off a difficult mission. Best of luck to you!

I don't know for certain that it would have any effect, good or bad.

I do know that a lot of young kids that might otherwise be interested in getting involved in amateur radio don't have ANY interest in learning morse code. And who cares about using VHF to communicate around town when everone has a cell phone? With the relative ease of worldwide communication available via the internet I find it difficult to even get young kids interested in SW radio.

I don't know what the answer is but I do feel that the current/future demographics of ham licensing in this country makes for a rather bleek long term scenario.

If folks want to work CW that's fine. It is a fun and useful mode. I just don't think that the attitude of many that a CW requirement somehow acts a "natural barrier to the riff-raff" has any credibility.

I think a Novice class, no code license with limited HF privileges and a General with a 5 wpm requirement wouldn't be a bad thing. On the other hand even that may not be enough to get folks interested/involved.

Ham radio is more than just a hobby. It is a valuable public service especially in times of disasters. It would be a shame for this service to wither away because the "there's no corps like the old corps" camp wouldn't adapt in order to survive.

Without numbers (of hams) and use of the spectrum it WILL disappear.

The only thing I do feel certain about is that maintaining the status quo will ensure the demise of amateur radio in this country.

Does anybody have stats (or a URL) on licensing in other countries? Is ham radio a hobby in decline in most of the world? I have been able to find some stats for the UK and Japan (and they show a downward trend in the last few years) but not much else.

Gerry

Look at the formula I used

Pr = Pt + Gt + Gr - (32+20log(f)+20log(d))

the path loss expression 32+20log(f)+20log(d) contains the term
20log(f), which would indicate that the path loss increases with the
square of frequency and this has made some to incorrectly conclude
that microwaves are somehow inherently lossy and thus unusable.

This problem comes from the fact that antenna quality is usually
measured in gain relative to a reference antenna (usually dipole or
isotropic radiator) for both transmitting _and_ receiving antennas and
usually expressed in decibels. While it is quite natural to look at
the directivity (and thus also gain) of a transmitter antenna, using
gain or directivity is quite unnatural for receiving antennas.

A much better figure of merit would be the capture area of the
receiving antenna. The capture area around a half wave dipole is
usually drawn as an ellipse surrounding the dipole. Now, if we are
going from f to 3f (e.g. 144 MHz to 432 MHz) the dipole is only 1/3
the size and the both the capture area ellipse will be 1/3 in both
width and length, thus the capture area drops to 1/9 of the original
capture area.

While the capture area for a dipole on 80 m is about the size of the
wall of a small apartment building, the capture area on 23 cm for a
dipole is about the size of your hand. If the field strength is the
same (expressed either in V/m or W/m2) the power delivered by the
antennas is proportional to the capture area. Thus, in order to get
the same receiving power on 23 cm, a huge parabolic reflector would be
required to collect the same amount of power as on 80 m.

For some strange historical reason, in signal strength calculations,
the standard practice is that this reduction of capture area is not
combined with the receiver antenna gain, as it should, but instead it
is combined with the path loss part of expression, causing some

confusion.

Long distance (>100 km) microwave communication is practically impossible using omnidirectional antennas due to the very small capture area of the receiving antenna.

However, while the transmitting antenna on 80 m is nearly omnidirectional, it is quite easy to build highly directional antennas on microwave. The gain and directivity for a specific dish increase with frequency, the field strength at the receiving antenna will increase, delivering a constant power to the load from a dipole receiving antenna or an increasing power from a dish. Thus, the highest possible frequency should be used when dishes are used at both ends of a point to point microwave link.

Back to the original problem, the path loss would be 242 dB and with +40 dBm (10W) transmitter power and omnidirectional antennas (0 dBi) at both ends, the received power would be about -202 dBm.

I used an effective antenna temperature of 300 K, which should be quite likely for such a low frequency and a good quality masthead preamp. This translates to -174 dBm/Hz noise density and in about 1/1000 Hz bandwidth, the signal power would be about the same as the noise. To get some positive SNR, the bandwidth would have to be reduced even further.

In practice, this would not be detectable due to transmitter and receiver oscillator phase noise, doppler shift caused by object movement as well as turbulence in the Earth's atmosphere.

It seems that you have assumed that the isotropic radiator specified
in the problem was used at both ends, while others assume that the
transmitter antenna is that isotropic radiator, while the receive
antenna is unspecified. This introduces the possibility of adding
in a couple of decibels for Gr.

People *are* experimenting with PSK31 for amateur satellite
communication, but the digital satellites use 9600 baud MSK,
1200 baud BPSK and 1200 baud FSK on their downlinks. You
need different software to handle these. Introductory infor-
mation is on AMSAT's web page at:

http://www.amsat.org

Why not have a look?

The no-code technicians' licence got a lot more, well technicians,
involved in amateur radio when AR needed that influx of skills.
Prior to that, many of the newcomers to AR were old telegraphers
or signal corpsmen who had previous experience in operating and
morse code.

SSB, FM repeaters, the digital modes, satellite comms, SHF and
many other more recent developments in AR have come from
the participation of the technician class who have had a back
ground in electronics and telecommunications rather than an
operating background. It worked at the time, but that time has
passed.

> I do know that a lot of young kids that might otherwise be interested

Society has changed. The thrill of listening to wireless communication
I had as a kid in the sixties is completely lost on this younger generation.
Their loss. Hell, who has heard of a crystal set these days.

However, expectations and needs change with time, along with
technology. AR has seen changes in technology before along
with changes in culture before. The demise of amplitude modulation,
the welcome demise of spark transmission, FM repeaters, to make
it more relevant to this newsgroup, the demise of linear transponders
on amateur satellites. The silicon chip has changed this hobby
considerably during the past 15 years.

> I don't know what the answer is but I do feel that the current/future

> long term scenario.

Ham radio does not appear to be particularly relevant to young
people these days. We really need an influx of the IT professional
types who have the expertise in networking, or multi-media, or

both. Certainly there are hams who have those qualifications
already, but what is needed is new blood. We need the numbers
on the ground.

> If folks want to work CW that's fine. It is a fun and useful mode. I
> just don't think that the attitude of many that a CW requirement

I firmly believe that CW should be seen as just another mode, the
same as anyother mode. I enjoy CW and use the mode by choice,
not because I have to but because I get a buzz out of it. It is the
compulsion of the mandatory code exams which is causing the
problems, not the noble old art itself.

> I think a Novice class, no code license with limited HF privileges and
> a General with a 5 wpm requirement wouldn't be a bad thing. On the

> interested/involved.

Get rid of the statutory requirement of code exams for HF. It is
so irrelevant.

> Ham radio is more than just a hobby. It is a valuable public service
> especially in times of disasters. It would be a shame for this service
> to wither away because the "there's no corps like the old corps" camp
> wouldn't adapt in order to survive.

The emergency services capacity of ham radio carries a lot of weight
with the regulatory authorities. It is only us hams and the signal
corp who have the training and flexiblity to handle volumes of
traffic in disaster situations. We come much cheaper for the
government. The signal corp is an expensive operation.

> Without numbers (of hams) and use of the spectrum it WILL disappear.

In VK we have already lost a part of the 70 cm ATV band to the Sydney
Olympics. It's gone for good, the government will make a packet flogging
it off to commercial interests after the games. 400 Mhz is prime real
estate.

> The only thing I do feel certain about is that maintaining the status
> quo will ensure the demise of amateur radio in this country.

User-pays is a principle of government these days, and commerce
can and will pay more for spectrum than AR ever can. We lose.

> Does anybody have stats (or a URL) on licensing in other countries? Is

> in the last few years) but not much else.

In VK there has been a noticeable loss of active operators. The peak
amateur body, the WIA, is losing members at an alarming rate. Perversely,
the numbers of amateur licenses on the ACA database is relatively static.

Hams seem to be retaining their call but are certainly not as active, or active at all. Wierd.

73,
Bill, VK2GWG.

Well, IMHO of course, WIA membership is fairly expensive. For me,
membership provides the QSL bureau and a nice magazine, and not
much else. A flawed perception perhaps.

MIND CONTROL UTILIZING DIRECTED-ENERGY WEAPONS--NEW WEB SITES

Get the unvarnished truth about mind control involving directed-energy weapons and usage in the Cleveland, Ohio, area of the United States (and elsewhere)--so far apparently censored by Internet search engines, so that I have to do my own publicizing. Even the Internet seems to involve a certain amount of censorship. Criminals who want to control the social structure unhindered by any legal restraints would rather relegate this report to an obscure corner of the Internet. They have been operating avowedly totally amoral for several decades now. Hardened criminals flaunt their amorality mockingly in front of victims, knowing police will not respond to complaints. They operate at close range with no serious police interference. The cost of secrecy is high in human suffering. The criminals being sought do nothing but manufacture radiation weapons for the torture and destruction of humanity. As far as they are concerned, these weapons are for them primarily brain damage, torture, and extortion weapons for use in combat situations and wars of conquest--as instruments of social control in disregard of any Bill of Rights. Positive applications are lost. The objects of this "combat" are currently innocent, unarmed American civilians in their homes, and preparations could be underway to subject victims the world over to further atrocities.

YOU HAVE THE RIGHT TO KNOW !!!!

What you don't know could literally kill you or leave you vulnerable to total enslavement.

I didn't know until I was struck that there was absolutely no privacy in my supposedly private home. Thugs enter at will and spy on all citizens' activities with no restraint, often out of pure voyeurism.

So-called nonlethal weapons are actually lethal when used indefinitely without restraint and under certain conditions. Most victims harbor some amount of brain damage, deliberately inflicted by literal cooking of their craniums with hazardous radiation by thugs. This is a primary method relied upon to seal in the secret, ensuring the triumph of totalitarian

control and organized crime.

Criminals don't want you to know for one overriding reason. They fear regulation. With total ignorance of the population they need not fear detection, limitation, or reprisal. They would not be as inhumanly vicious as they are if safety were their primary concern. It is a misguided belief that the purpose of national security is served by suppression of information, which results in no legal or practical regulation or preparedness for assault. Help stop them and their Attila-the-Hun-type tactics of Control.

For more information see my web site at any of the following web addresses (mirror sites):

This kind of problems (I have not seen it with SatTrack) is usually
caused by using an X visual that is not supported by the application.

Maybe you have selected 24-bit color when setting up X? That is generally
not a good idea, many applications (e.g. those developed with Motif)
do not function correctly with 24-bit color.
Decide between 16-bit and 32-bit...

3327. Antartic DML 1999 Expedition (amateur PACSAT satellite use)

Newsgroup: rec.radio.amateur.space
Date: 1999-12-13 00:00:00 UTC
From: ds0007@medtronic.COM
Message-ID: <833h6m$ii8$1@gazette.corp.medtronic.com>
Source record: 10843

PACSAT used for Antartic trek and expermental weather station data

After reading all sorts of online diatribes on how Hams no longer participate
in leading edge technology, it was refreshing to see a group researchers
(who are also Hams) developing remote weather stations. As a bonus, there's
an Antartic expedition involved. It doesn't get much better than this :-)

Antartic Expedition
==========
the 1999 trek has a homepage at http://www.thistle.org/dml_index.htm

Documentation of the portable station equipment with a nice PDF image
is at http://www.thistle.org/equip99.htm

Expedition status updates are at http://www.thistle.org/dml/

Stanford Permanent Ground station
==========
The research ground station is at Stanford. They do a pretty good job at
documenting the ground station. They even include the cost of components
http://aa.stanford.edu/~ssdl/facilities/gs/

Introduction to PACSAT
==========
Standford has some information that looks like a good introduction to PACSAT:
training guide: http://aa.stanford.edu/~ssdl/facilities/gs/GS_Training.htm
Operations manual: http://aa.stanford.edu/~ssdl/facilities/gs/GS_Ops.htm
Troubleshooting: http://aa.stanford.edu/~ssdl/facilities/gs/GS_T&M.htm

I have uploaded version 1.3 of PB and PG for Linux to Metalab.unc.edu.
The file
name is pbpg-1.3.tar.gz. I have placed the file and the accompanying
lsm-file in /pub/Incoming/linux. The target directory is
/pub/linux/apps/ham.
The file may also be downloaded from
ftp://ftp.amsat.org/amsat/software/Linux/pbpg-1.3.tar.gz.

The updated documentation is found in the file named README.

A few errors have been corrected:
- A packaging error which resulted in an overly optimistic
downlink
efficiency.

The following improvements have been made:
- The routines for download control are placed in a separate file
download.c.
If desired, these routines may be replaced by other routines.
The only
requirement is that the interface conventions - including the
routine names -
must be adhered to.
- This has resulted in a new command line paramer and other
additions. Please
refer to the README file.

The following is believed to be an incorrectness:
- Sometimes PB will send requests for directory fills when it is
not
needed. I have only seen this with AO-16 but it has been
reported to happen
with KO-25 as well.

The lsm reads as follows:

Begin3
Title: PB and PG for Linux
Version: 1.3
Entered-date: 15 DEC 1999

Description: PB and PG for Linux are program used for download from
and
upload to digital satellites (Pacsats) supporting the
FTL0
protocol. This software allows you to directly

communicate
with the Microsat series of satellites. It provides a
Curses (Ncurses) based user interface. It features
automatic
directory fill requests and simple, rules based file
download requests.
This version of the programs will work with kernel
revisions 2.0.24 or higher.

3340. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.space
Date: 1999-12-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <83a48f$74v$1@news.hawaii.edu>
Source record: 10706
Cross-posted to: rec.radio.amateur.space,rec.answers,news.answers

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

3341. FS: 10.4 GHz 10W solid state amp

Newsgroup: rec.radio.amateur.space
Date: 1999-12-16 00:00:00 UTC
From: Jochen Zilg <mmwave.zilg@t-online.de>
Message-ID: <83agmm$ds4$1@news05.btx.dtag.de>
Source record: 10707

The unit is a complete Amplifier system including AGC, Isolators at input
and output,
Gain > 47 dB, Power out at 1 dB comp. point > 39.5 dBm (measured after the
isolator).
The case is small enough to mount it directly at the feed horn of a parabol
antenna.
System was originally used as transmitter amplifier in 16 QAM radio relay
link (SIEMENS).
Amplifiers are tested in the factory and not used at all.
Power supply +11 to 14 V 7 A and - 9.5 Volts 100 mA.
Price 900 DM without transport costs.
Power output can be raised by skilled amateurs to more then 10 Watts by
replacing the matched
10 W Transistor by a newest 15W Transistor (Toshiba)....

Jochen

Hi,

Saw your note:

> Ham radio does not appear to be particularly relevant to young
> people these days. We really need an influx of the IT professional
> types who have the expertise in networking, or multi-media, or
> both. Certainly there are hams who have those qualifications
> already, but what is needed is new blood. We need the numbers
> on the ground.

Although not _that_ young, I just got my licence back two weeks ago after 8 years' lapse.

Maybe I'm just the sort of person you're talking about. Emersed in electronics from the age of 11, licenced at 14, although I found electronics more up my street, I discovered that IT as a career paid more than electronics 15 years ago. So that's what I've been doing.

Back into ham mode, I'm setting up my station again. This time I've got a bit more money to play with. So, I got an FT847 for Sat work. Putting up the antennas this weekend, 14dBd on 2m and 17dBd on 70cm on an alt-az rotator with a couple of preamps.

Maybe I can put some of my 20 odd year's IT networking & software experience to some use with ham radio.

My electronic & ham radio background has been _invaluable_ in my ability to pick things up. I get 'techies' trying to BS me with time domain reflectometers and other cabling jargon all the time. But at the end of the day I know how those computers talk to each other down to the electron level. Now try asking back why you need a terminator at the end of a SCSI cable and they'll just say 'because you do'.

When I explained to my work colleagues that I was going to be talking through satellites, they thought I was on another planet (sorry for the pun). But I can tell you that when I finally get my first QSO on a satellite and a QSL card, it'll all be worth it.

Regards, Howard. G6LVB

Source record: 10720

Hi all,

For a long time now I have been sad that we cannot get the Nasa TV from the GE bird here in UK/EU is there anyone out there in UK/EU who would like to join me in correspondance to relevant powers to get a slot made on a European- visible sat (intelsat K, Eutelsat etc.) so we can all share in the progress of what is after all meant to be a "International" space station and of course the other educational programming offered on NTV.

I know that the ESA currently transmit launches and some educational/informational programming on intelsat and Eutelsat but while this is encouraging and welcomed it is only for 20-30mins per day!!.

I really think that people in UK/EU could benefit from this happening and it seems only right that it should be so as it is also our tax money paying for the EU contribution to the space effort so we should have access to this programming.

Also it would provide more insparation and information to those who have an interest in this field wether hobby or with an eye to a career in it.

Please tell me what you think, and if you want to help please mail me also, please include any relevant info you think may be appropriate.

with thanks

Look at BR3 each night. They usually transmit launches (sometimes live
when they happen at European nighttime). When nothing interesting happens
they air re-run after re-run of Apollo mission documentaries, pictures
of earth from the shuttle, etc.

It is on Astra, digital and analog. Not encrypted.

Yeah thanks Rob, I have watched that for a time now and it is of course
better than nothing but what I would really like to see is the educational
programming done by Nasa, this is quite good and is on all the time in
between live events etc instead of just here and there. I really think that
UK/EU could make a lot better effort in this area especially when you see
just how much the whole of UK/EU has put into the ISS, it is pitiful !.
there are smaller countries that are poorer that have put more into it than
the whole of UK/EU ...how sad !!.

Now this is starting to get really funny. Two people claiming intellectual superiority by their
lack of ability to comprehend a silly pun.

CLUE: (for those without one)
"Doppler effect" was _intentionally_ mispelled by changing a single letter to make a bogus term
"Dopeler effect". This is a pun using the word "dope" which has one meaning defined as a "very
stupid person", which fits the context of the bogus definition.

The pun really isn't all that funny until people respond with "spelling error". Of course, if
people are just pretending (trolling) to be under the "dopeler effect", then the joke is on me :-)

May we all experience many pleasant jokes during the holidays.

There are no more Shuttle Sarex missions. It will be done by the ISS
when they get the gear up there. 2m and 70cm are at the cape and
ready for their flight up. Which is in one of the next few missions.

I find it very difficult to gather up the current freq. for the major weather and amateur satellites. Can someone please post the freq for some AO, NOAA,GOES, and RS sats? If you only know one of them please post, the more people that post the better, then I will take them all and organize them, and post a complete version in this newsgroup.
(Very useful for most newbies). Post all popular sat frequencies.

Thank you,
Felix

The amsat website is garbage!

I was searching all over amsat, you think it has freq. for noaa, or
something else? No way! You'd think that they would have a link :
"FREQUENCIES" nope!

So it would be useful if some people here posted some freq. that they use.

Thank you.

Try this address:

www.users.wineasy.se/svengrahn/tracking/antique/downlink.htm

There you will find history and a whole page of listings for freqs that satellites operate on.

They are an AMATEUR RADIO organization hence they have amateur
radio satellite info. Try some scanner/shortwave radio web sites. I'll
see if I can find some sites for you as well.

Try this for Hurricanes:
http://members.tripod.com/columbus_east/hurricane.html

Try doing a search for NOAA for weather freqs.

Just what frequencies are you looking for exactly?

I was not claiming "Intellectual superiority" but merely stating a fact. I guess Joe thinks that if he posts his repeated message every 6 hours, that people might not have read the other 40 messages, and they will zip on over and bid on it.

Hence the "Not the sharpest pencil in the box" comment. He's nothing but a spammer.

BTW: He's listed the same item twice, and still not 1 bid.

So much for Mega Advertising.

Wanting to play with the sats but not sure what to get as a first rig. Keep in mind that I am on a budget as most of us are today. Three kids and college funds keep things to a minimum here! I am looking at the 726R, 736R, Icom 820 or 821. I have found decent prices on all but not sure which has the best all around features. Not all the bells and whistles are needed for me. Any inputs folks?

>something else? No way! You'd think that they would have a link :
>"FREQUENCIES" nope!

Here's one place to look:

http://www.amsat.org/amsat/articles/satgen/idx058.html

which leads to:

ftp://ftp.amsat.org/amsat/articles/satgen/sgen443.txt

among others.

>
>So it would be useful if some people here posted some freq. that they use.

Along with that, a simple Google search at:

http://www.google.com

for "satellite frequencies"

turns up around 300 hits in 0.15 seconds. Among them, this list:

http://www.web.netactive.co.za/~margie/satlist1.htm

Next time, learn to use a search engine and be a bit more persistant before complaining about web sites you can't find your way through.

Stuck in a cul-de-sac on the Information Superhighway

3390. FS: Icom IC-970H VHF/UHF 144/430 mhz All Mode Transceiver

Newsgroup: rec.radio.amateur.space
Date: 1999-12-28 00:00:00 UTC
From: "Dwight G. Bosselman" <dgbcms@bayland.net>
Message-ID: <84aq8e$f2l$2@news.inc.net>
Source record: 10656

I have a ICOM IC-970H VHF/UHF 144/430 mhz All Mode Transceiver in very good condition (one owner, non-smoker). It is just back after a complete going over and alignment from AAVID in Texas (have receipt).

This is a large base station type rig measuring 16.7" wide x 5.9" high x 16" deep with rack handles and weighs in at 32 lb. Comes stock as purchased with HM-14 hand mike, rack handles, manual/schematics and literature. Has none of the optional accessories but they are still available, such as 1200 Mhz operation and 50-905 Mhz receiving. Have a .jpg picture file available upon request.

Among the features are simultaneous dual band receive capability, transmits on 144 and 430 mhz with 35w out on SSB and CW and 45w out on FM. Each band has 99 memory channels for storing frequency, mode and other information. Also has 10 Satellite memory channels for Satellite operation. Has a large multi-function yellow LCD display.

Asking $1600 firm, includes shipped U.P.S. CONUS. Rig guaranteed as described or money back, buyer pays return shipping. Don't have the original box but will be packaged well. Payment must be made in form of money order or cashiers check. No personal checks or C.O.D.'s Please!

If interested or need more information hit reply on this message.

Keith,
Which sats do you most want to work? Voice or Data? LEO or AO10 type?
Future P3D only? Makes a difference in what kind of rig you might
want. For LEO's, even an FT726 should work fine with 10 watts output.
It will also be the cheapest rig you can find used. But it's not
adequate for AO10. You would need a 435 MHz linear, and possibly a
pre-amp as its UHF receiver is a bit anemic. A 736 is still a very good
all around rig, but a bit pricey. The 820 had a few drawbacks, but the
821 fixed most of them and is considered a good rig. If you can get a
smoking deal on an 821, go for it!

(Note: I've had only the FT726 and FT736 in my own shack)

Well, while it may be a little strong to call it "garbage", it certainly
could use a nice table containing information for all current (and past?)
amateur satellites in a consistent format.
There are many links to satellite descriptions, but only some of them
are in a standardized format, and some external links do not work at all.

As you mention, other sites sometimes have such lists. It would be good
to have one at a wellknown location like www.amsat.org. Probably the
maintainers of other lists would not mind to contribute it.

Deep within the AMSAT web pages there is mention that Instant Track is going to have a new release (1.5?? I believe) in July 99 that would be Y2K compliant. Obviously that date has come and gone and I see nothing about where or how to get that version.

Did this release ever occur or will I now have to find myself some new tracking software for the new year?

Thanks in advance
Dave, N0IT

I'd also like to see a fix for the problem IT has with newer video cards
which causes the text in the map screens to be trashed. However, I
expect that the author may not be inclined to spend a lot of time on
an old DOS program, so I'm evaluating Win32 and Linux-based
alternatives.

If anyone has experience-based recomendations on either Win32
or Linux sat trcking programs, I'd appreciate a comment and a URL
to the download site.

I've used Instant Track since I had my 286 Laptop, and it's great. Accurate as hell. Still use it today. Just wish a few updates were done on it, to make it more state of the art, Instead of an Aging relic, such as Mir.

Paul

Howard,
Saw your post regarding your sattelite hookup. I have been trying to find out more about the whos, what ifs, how tos, etc. regarding satellite but I haven't been successful in finding much in the way of resources. Could you point me to the resources you used to make your decisions to go space?

Mark

Thanks for the hints ... the IT patch doens't solve my video text problems
unless its been updated in the past few months.

Also, when I said Win32, I did not mean the Win32s patch to Win3.x,
I meant aWin9X and up ... I'm presently running Win2k on my main
machine ... MUCH more robust and stable than Win95/98.

A nice tracking program for Linux exists: SatTrack. Unfortunately it
has gone commercial, and it seems to target professional users so it
is probably quite expensive. But you can always ask, it was written
by a radio amateur.

Site: http://www.bester.com/

The 3.1.6 version is available for free, but the author says it is not
Y2K compliant. I have not yet looked what is wrong and what can be done
about it, as I am not using it very often. I will wait for Y2K and the
first keplersets, and then I will see if it can be fixed (when required)
and if a patch can be created.

It works OK (up to now), has both textmode and graphical display.
It can track a number of satellites and draws a worldmap with positions
and groundtrack of a selected satellite, plus coverage circles.
The new commercial version does much more.

The word is Quiktrak will not be upgraded (from the amsat web site)

It's a shame I always like that zoom in map, and it prints future schedules
better than the others (my opinion)

73,
Joe

3412. Re: Join the Space Program

Newsgroup: rec.radio.amateur.space
Date: 1999-12-31 00:00:00 UTC
From: Jason Brown <jasonb@lunartic.com>
Message-ID: <386CF708.CC53B02A@lunartic.com>
Source record: 10678

Sorry about the blank message. Here is what I meant to post . . .

Join the Space Program

Have you ever wanted to be part of the space program?

Imagine the thrill of walking out to the launch pad knowing that soon you will be sitting on top of that huge vehicle being thrown toward the stars. Imagine the incredible rush of feeling the thrust generated by the massive rocket engines. Imagine the incredible euphoria of floating around in zero gee - looking down at Earth . . .

Millions of people around the world have a deep interest in outer space. Many of those people would give almost anything if they could have the opportunity to go to space - even for a brief visit.

If you are one of those people, chances are you're already involved in one or more space organizations or clubs. Space organizations serve a vital role in educating and building public awareness; however, for the die-hard enthusiast, they may not provide you with enough satisfaction. You probably want much more.

International Space Network, Inc. (ISN) gives you a way to be an integral part of the private-sector space program. Not a club, not an organization, ISN is a Florida corporation dedicated to developing commercial opportunities in space.

ISN was founded and is comprised of space enthusiasts and business professionals. Like you, these men and women want more -- they want to experience the thrill of going to space, not just talk about it. These men and women are dedicated to making it happen.

In order to achieve its goals, ISN has adopted a very simple business plan which utilizes the fundamental principle of taking small steps - one at a time - to build a large successful enterprise.

Before the company begins to venture into space, ISN is building a strong business through earth-based products and services. ISN's management views space business like a football team views the super bowl: it takes lots of hard work and lots of smaller victories before you get to the big game.

ISN's flagship product is "Spaceward Ho! Vacations(TM)". Targeted toward adults, this six day vacation is an incredible experience which lets you share the excitement of preparing for a space journey. Located next to Kennedy Space Center, Spaceward Ho! Vacations give you experiences and activities that you can't find anywhere else. You will tour the space

shuttle launch complex and the International Space Station facility, get to know an astronaut, experience actual astronaut training simulators, build a space project, take a complete training course on space expeditions, and so much more. You can find out complete details about Spaceward Ho! Vacations and make your reservation by clicking on this link. Hurry, our next vacation is filling up fast!
<A
HREF=http://209.236.9.222:81/space/FMPro?-db=shv_reservations.fmp&-lay=main&Associd=BJ3450
&-format=info.htm&-new>

ISN will build on the success of its earth-based space-themed vacations - which are available now - until it is ready to begin offering vacations in outer space by 2008.

While all of this may sound exciting, what does it have to do with you getting involved with the space program?

ISN is building its success through people just like you.

You have the opportunity to get involved with ISN right now, at no cost, with no risk. Then - using the internet - you tell just a couple of people a day about ISN and about ISN's Spaceward Ho! Vacations simply by sending email or posting newsgroup messages just like this one. That's all that you have to do - just 3 or 4 emails or newsgroup postings a day. ISN's staff does everything else.

When you take advantage of this opportunity, ISN will send an email to you which looks just like this one except that the two links (the vacation link above and the opportunity link below) will be customized for you. As you send out your email and post messages in newsgroups, people will read it. Every time someone clicks on your link and then takes a Spaceward Ho! Vacation, ISN will pay you up to $75 in commission during a single month!

What's more, for those people who decide to follow your lead in becoming involved with ISN, the company will also pay you commission on the vacations that their messages generate. Again, up to $75 commission total in any given month.

If you want unlimited earnings potential, just ask ISN. But start here first - remember, achieve the big victories one small victory at a time.

There are many other benefits to getting involved with ISN:

* You will receive great satisfaction in knowing that you are part of something much bigger than yourself; that your efforts are helping to propel the human race toward its destiny in the cosmos. Very few people can make that claim but you'll be able to!

* You will help ISN prove to the world that ordinary humans who are dedicated to a cause can achieve the extraordinary.

* You will be joining a global community of space enthusiasts who are go-getters, people who believe that you have to build your own future and are willing to do whatever it takes to make it so.

* You will have an unlimited territory! You can tell people anywhere in the world about ISN and ISN's Spaceward Ho! Vacations.

* You will be invited to attend ISN's semi-annual space business conference where you will meet and network with many other people just like yourself, as well as ISN's staff and other space business professionals.

* You will receive regular updates from ISN via email telling you about each victory along the way.

* You will be able to take a Spaceward Ho! Vacation at a discount.

* You will be able to participate in contests which may allow you to win a Spaceward Ho! Vacation.

* And so much more.

Here's all you have to do to begin your exciting journey with the private sector space program:

1 - Click on this link and register with ISN. Remember, there is no cost and no risk.
<A HREF=http://209.236.9.222:81/FMPro?-db=internetassocap.fmp&-lay=main&SponsorID=BJ3450&Associatetype=Internet&-format=application/start.htm&-new>

2 - When you receive the email that you will be sent after filling out the registration form, simply send it to 3 or 4 people a day* and post it in 3 or 4 newsgroups a day.

3 - That's it! When those simple steps are complete you will be - officially - part of the space program! Welcome aboard!

---
* Make sure that you know the people to whom you send this email and that they will not mind receiving such an email from you. Also, note that you must not change the content of the message. There are other policies and procedures which govern your actions with respect to ISN; they can be found on ISN's website. Please read them carefully prior to registering.

3413. FS: M2 2MCP14 2 Meter Antenna

Newsgroup: rec.radio.amateur.space
Date: 1999-12-31 00:00:00 UTC
From: "William M. Bickley" <bickley@home.com>
Message-ID: <vN7b4.15636$mv4.473713@news.rdc1.nj.home.com>
Source record: 10679
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.space,rec.radio.amateur.swap

For sale at eBay: M2 2MCP14 2 meter circular polarized antenna. Bidding starts at $75.00

This M2 2 Meter circular polarized antenna is new/never used (in the original box). It's ideal for satellite work, but is also excellent for terrestrial uses like ATV, repeater operation and long haul tropo DX. Specs are as follows:
Gain: 10.3 dbc.
Front to back: 20 db.
Boom length: 10'6".
Elements: 7H/7V.
Turn radius: 6'4".
Weight: 6 lbs.

Current price as listed at the M2 web site (http://m2inc.com/) is $169.00.

Take a look at
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=228456523.

Thanks for your interest.

For those who read the original message, I've been advised of the impropriety of posting this as a for sale item, when in fact it is available at auction. Please accept my apology for the mistake, which was an innocent one. A similar message will be posted under two other postings I made before the error of my ways was communicated to me.

3418. A new project for space science and comms in the UK

Newsgroup: rec.radio.amateur.space
Date: 1999-12-31 00:00:00 UTC
From: Eavesdropper <ian@eavsdropper.dabsol.co.uk>
Message-ID: <_d9b4.2880$L4.74462@wards>
Source record: 10684

Hi all, first off happy new year (and millenium), I hope you have a great new year !.

Secondly I am looking for comments, assistance and input with regards to a new project I am just now trying to get off the ground but have wanted to do for years (I am even staying in tonight to get this messageand the site done :-).

This project is quite exciting for those of us who love space science and radio communications, A few of you in this group have probably seen my mails here before commenting about the lack of input in British schools in the area of space matters and I have decided to try my best to do something about it. I have just uploaded a web site for it and would very much appreciate your input.

I am only one guy but I have a passion for this field and belive that with the right organisation it could work, I already am waiting to hear from a major corporate spnsor that looks very good but of course I need much more help and this is also good for amateur radio in the UK.

If any corporate, individual or organisations wish to help then please visit the site and let us know what you think.

So come on down and see the site (still under construction) and let me know what you think.

with thanks and hope for the future !

ian koenig
